Abstract

This paper is an overview of the most relevant customer feedback concerning INSAR based services that have been developed and tested worldwide through a range of ESA/EOMD contracts since the year 2000, specifically over Japan, the US, Canada and Europe. These are based on the integrated use of INSAR based land motion measurements within geo-information services for a broad range of market sector, from civil and geo-technical engineering to mining/pipeline operators, seismic monitoring, geological surveys and the insurance sector.
