

## Conditions for the Access and Use of Sentinel-5 Precursor (S5p) pre-operational sample products provided through the Copernicus Expert Hub

Conditions for S5p Calibration and Validation (Cal/Val) Principal Investigators (PIs) and Algorithm Experts to access to and use of the S5p Copernicus Expert Data Hub link:

<https://cophub.copernicus.eu/s5pexp>

- Access to the S5p Copernicus Expert Hub is only granted to the PIs of S5P Cal/Val AO Projects and Algorithm Experts and should be exclusively used for the purpose of the Cal/Val of S5P.
- The Cal/Val AO project PI is responsible for distributing the data to his co-PIs. The PI has to ensure that all conditions for use are applied to the co-PIs.
- S5p Cal/Val Principal Investigators (PIs) and Algorithm Experts agree to report their Cal/Val results at ESA organized Workshops and via dedicated ESA web sites.
- All publications have to clearly acknowledge the preliminary status of the S5P products by including the following disclaimer:

*“The presented work has been performed in the frame of the Sentinel-5 Precursor Validation Team (S5PVT) or Level 1/Level 2 Product Working Group activities. Results are based on preliminary (not fully calibrated/validated) Sentinel-5 Precursor data that will still change.”*

- All publications have to clearly acknowledge the source of the S5P products by including the following disclaimer:

*“Sentinel-5 Precursor is a European Space Agency (ESA) mission implemented on behalf of the European Commission (EC). The TROPOMI payload is a joint development by ESA and the Netherlands Space Office (NSO). The Sentinel-5 Precursor ground-segment development has been funded by ESA with national contributions from The Netherlands, Germany, and Belgium.”*

- ESA advises all authors to involve the Level 1B/Level 2 algorithm developers in reviews of material to be published or presented. Co-authorship should be offered as appropriate.
