

Trace gases in the stratosphere

B.Carli and J.-M. Flaud

Optimistic picture

“Optimism is to find opportunities in the problems”

- GOMOS high resolution temperature retrieval
- MIPAS improved vertical and horizontal resolutions

Are results meeting the objectives?

- Discoveries
- Observation of processes
- NRT monitoring

=> To resume ECMWF assimilation of MIPAS NRT data.

Recommendations 1/4

- Spectroscopy
- Pointing
- Radiometric calibration

=> To continue the improvement of observation characterisation

Recommendations 2/4

ESA has the merit of ensuring for a long time the traceable quality of the measurements.

- => ESA endorsement should preserve this objective
- => Extension of the number of the ESA endorsed species

Recommendations 3/4

ESA was late with data distribution.

=> More efficient and friendly access to the data

Recommendations 4/4

The level of data exploitation is not up to the level of improvement that Envisat instruments provided in atmospheric observations.

=> Financial support to data exploitation is needed from National Agencies and Europe
