Table of Contents

1.Introduction.....	13
1.1.Purpose and scope.....	13
1.2.Book organisation.....	13
1.3.Acronyms and Abbreviations.....	13
2.Target of preservation.....	14
3.Data Structures.....	15
3.1.Data Structures common to HDR files.....	15
3.1.1.Simple Types.....	15
3.1.1.1.ShortTimeType.....	15
3.1.1.2.LongTimeType.....	15
3.1.1.3.SizeType.....	15
3.1.2.Complex Types.....	16
3.1.2.1.FixedHeaderType.....	16
3.1.2.2.ValidityPeriodType.....	17
3.1.2.3.SourceType.....	17
3.1.2.4.MPHType.....	18
3.1.2.5.ProcessorType.....	20
3.1.2.6.TimeInformationType.....	20
3.1.2.7.SensingType.....	20
3.1.2.8.AbsOrbitType.....	21
3.2.Data Structures common to DBL files.....	21
4.EGG Specific Data Structures.....	22
4.1.Data Structures for file types in HDR format.....	22
4.1.1.EGG_NOM_2_HDR.....	22
4.1.1.1.Root Element.....	22
4.1.1.2.Complex Types.....	23
4.1.1.2.1.EGG_NOM_2_EEH_Type.....	23
4.1.1.2.2.EGG_NOM_2_VariableHeaderType.....	23
4.1.1.2.3.EGG_NOM_2_SPHType.....	23

1. Introduction

1.1. Purpose and scope

This document is part of the Standard Archive Format for Europe specialisation for GOCE (SAFE Specialisation for GOCE). This specialisation consists of the following set of documents:

- the GOCE mission specialisation control book, which is the top-level document of the specialisation, containing all the information that is common to all SAFE GOCE products and auxiliary files.
- three GOCE product specialisation control books organized by product level, one for GOCE Level-0 products and auxiliary files, one for Level-1 auxiliary files and one for GOCE Level-2 products.

The current book is the specialisation control book for GOCE Level-2 products.

1.2. Book organisation

The specialisation control book GOCE Level-2 products is organized as follows:

Chapter 1: Introduction	Introductory part of the document.
Chapter 2: Target of preservation	Description of the target of preservation for L2 products.
Chapter 3: Data Structures	Specification of the simple and complex types that are common to represent either an HDR or DBL file respectively.
Chapter 4: EGG Specific Data Structures	Specification of the simple and complex types that are used to represent the information of the product types associated to the EGG instrument.
Chapter 5: SST Specific Data Structures	Specification of the simple and complex types that are used to represent the information of the product types associated to the SST instrument.

1.3. Acronyms and Abbreviations

ASCII	American Standard Code for Information Interchange
DBL	Datablock
GNU	GNU is Not Unix
HDR	Header
MPH	Main Product Header
PDS	Payload Data Segment
SPH	Specific Product Header
W3C	World Wide Web Consortium
XML	eXtensible Mark-up Language

2. Target of preservation

GOCE L2 products in native format are available in tar/gzip format, with extension “.TGZ”(GNU-zipped tar file merging). However, the targets of preservation considered in this SAFE specialisation are the header (HDR) and datablock (DBL) parts of those products, i.e. the files which are stored within the tar/gzip files.

The following table summarises the list of product types in scope and points the reader to the sections in the document where the information about the main structure of the file can be found:

Product Type	Target of preservation	Structure specification
EGG_NOM_2_	Header file (.HDR) Datablock file (.DBL)	For HDR see section 4.1.1 For DBL see section 4.2.1
EGG_TRF_2_	Header file (.HDR) Datablock file (.DBL)	For HDR see section 4.1.2 For DBL see section 4.2.2
EGM_GOC_2_	Header file (.HDR) Datablock file (.DBL)	For HDR see section 4.1.3 For DBL see section 4.2.3
SST_PSO_2_	Header file (.HDR) Datablock file (.DBL)	For HDR see section 5.1.1 For DBL see section 5.2.1

Table 1: Product Types Specification Index

As a consequence, any product in native format must be unpackaged and decompressed before being converted into SAFE and the SAFE Packages will only contain the unpackaged and decompressed files. This is because the representation information schemas that are provided along with this specialisation describe the unpackaged and decompressed files, not the tar/gzip format (there would be limitations in doing this, as explained in the SAFE Core Specifications).

3. Data Structures

The information included in this section has been generated using the specifications defined by the schemas that represent the information of the L2 product files.

HDR and DBL files are simple/pure XML files (i.e. text files) that can be represented using standard XML Schemas.

The representation information for HDR and DBL files is described by mean of complex structures that make use of simple types to represent the whole content of a given file type. The following subsections provide a detailed description of those complex/simple types that are common to HDR and DBL files respectively.

The diagrams included in this document provide an overview of the structure of the products by depicting the schemas which provide their representation information.

3.1. Data Structures common to HDR files

The following simple and complex types have been specified as basic types to represent the information of the HDR files in the scope. They are available for the representation of any HDR file of a specific product type in scope.

3.1.1. Simple Types

The DFDL schemas used to represent the information of the L2 products make use of the standard W3C simple types (e.g. xs:string, xs:integer, xs:NCName, etc...). Some of these types have been restricted for GOCE needs, resulting in new specific types detailed below:

3.1.1.1. ShortTimeType

Base Type	Format
xs:string	UTC=yyyy-mm-ddThh:mm:ss

Table 2: ShortTimeType Specification

3.1.1.2. LongTimeType

Base Type	Format
xs:string	UTC=yyyy-mm-ddThh:mm:ss.uuuuuu

Table 3: LongTimeType Specification

3.1.1.3. SizeType

Base Type	Format
xs:integer	units: bytes Total Digits : "13"

Table 4: SizeType Specification

3.1.2. Complex Types

The following complex types are used by the DFDL schemas to represent the information of the L2 HDR products and auxiliary files:

3.1.2.1. FixedHeaderType

The standard GOCE header is completely ASCII and based on XML. The Fixed Header is the common header for all files in the GOCE Ground Segment. That means it is applied to all files flowing amongst the sub-systems composing the PDS.

#	Description	Format
1	File_Name Product File Name without the extension	xs:NCName Max Length : 55 bytes
2	File_Description This field shall contain a description of file product. Possible values: L2 gravity gradients in GRF with corrections L2 gravity gradients in LNOF with corrections Final GOCE gravity field model with error estimates and quality report Precise Science Orbit for GOCE Non tidal correction	xs:string
3	Notes This field shall be always empty	xs:string
4	Mission This field shall be always GOCE Possible values: GOCE	xs:NCName
5	File_Class This element allows to specify the usage of the file, for a specific phase of the ground segment development or operations cycle. It allows, in particular, to reset version counters for each new phase without any risk of having ambiguous file names. For example, mission planning files used for SVT tests can be numbered independently for each SVT test, and all of those can be independent from the routine operations numbering. Possible values: OPER	xs:string

#	Description	Format
	TEST CONS	
6	<p>File_Type</p> <p>This element uniquely defines the file structure. All files of the same File Type share the same structure.</p> <p>Possible values: SST_PSO_2_ EGG_NOM_2_ EGG_TRF_2_ EGM_GOC_2_ SST_AUX_2</p>	xs:NCName
7	<p>Validity_Period</p> <p>This element specifies the Start and Stop time defining the satellite measurement period.</p>	ValidityPeriodType
8	<p>File_Version</p> <p>This field is version number of the generation of the product. It shall start from 0001 and increased by one anytime the same product shall be regenerated.</p>	xs:integer Total Digits : 4
9	Source	SourceType

Table 5: FixedHeaderType Specification

3.1.2.2. *ValidityPeriodType*

#	Description	Format
1	<p>Validity_Start</p> <p>Validity Start time in UTC.</p> <p>This can have the special value 00000000T000000 for beginning of mission, or if a validity period is not applicable.</p>	ShortTimeType
2	<p>Validity_Stop</p> <p>Validity Stop time in UTC.</p> <p>This can have the special value 99999999T999999 for end of mission, or if a validity period is not applicable.</p>	ShortTimeType

Table 6: ValidityPeriodType Specification

3.1.2.3. *SourceType*

#	Description	Format
1	System	xs:string

#	Description	Format
	GOCE High Level Processing Facility (HPF) Possible values: GOCE High Level Processing Facility (HPF)	
2	Creator HPF's Central Processing Facility (CPF) using cpf_eef_create Possible values: HPF's Central Processing Facility (CPF) using cpf eef create	xs:string
3	Creator_Version This field gives the version of the creator tool	xs:string
4	Creation_Date This field gives the UTC date of the generation of the file	ShortTimeType

Table 7: SourceType Specification

3.1.2.4. MPHType

#	Description	Format
1	Product Product File Name Note: the file name shall be without the extension.	xs:NCName Max Length : 55 bytes
2	Ref_Doc Reference DFCB Document describing the product shall always be "GO-ID-HPF-GS-0041" (Product Specification for L2 Products and Auxiliary Data Products, Issue 6.1, 30. April 2009) Possible values: GO-MA-HPF-GS-0110	xs:string
3	Acquisition_Station Empty	xs:string
4	Processor	ProcessorType
5	Time_Information	TimeInformationType
6	Phase Phase Code. Not used in GOCE. Set to X Possible values: X	xs:NCName
7	Cycle Cycle number. Not used in GOCE. Set to 0 Possible values: 0	xs:short
8	Rel_Orbit Relative Orbit Number at sensing start time. Not used in GOCE. Set to 0	xs:short

#	Description	Format
	Possible values: 0	
9	Abs_Orbit Absolute Orbit Number at sensing start time. Not used in GOCE. Set to 0 Possible values: 0	xs:integer
10	State_Vector_Time Empty	xs:string
11	X_Position Not used in GOCE. Set to '0.000' Possible values: 0.000	xs:decimal
12	Y_Position Not used in GOCE. Set to '0.000' Possible values: 0.000	xs:decimal
13	Z_Position Not used in GOCE. Set to '0.000' Possible values: 0.000	xs:decimal
14	X_Velocity Not used in GOCE. Set to '0.000000' Possible values: 0.000000	xs:decimal
15	Y_Velocity Not used in GOCE. Set to '0.000000' Possible values: 0.000000	xs:decimal
16	Z_Velocity Not used in GOCE. Set to '0.000000' Possible values: 0.000000	xs:decimal
17	Vector_Source Empty	xs:string
18	Product_Err Product Errors: 0 - no errors; 1 - errors have been reported Possible values: 0 1	xs:integer
19	DBL_Size Datablock Size (unit: bytes)	xs:integer Total Digits : 13
20	HDR_Size Header Size (unit: bytes)	xs:integer Total Digits : 11

#	Description	Format
21	Num_DSD Number of DSD	xs:integer
22	Num_Data_Sets Number of DSDs with Dta_Set_Type='O'	xs:integer
23	CRC Not used in GOCE. Possible values: -1	xs:integer

Table 8: MPHType Specification

3.1.2.5. ProcessorType

#	Description	Format
1	Proc_Stage Processing stage code. Possible values: O T R C	xs:string
2	Proc_Center "HPF" for L2 Possible values: HPF	xs:string
3	Proc_Time Processing Time (Product Generation Time)	ShortTimeType
4	Software_Ver Processor Name and software version number. ProcessorName/VV.rr	xs:string

Table 9: ProcessorType Specification

3.1.2.6. TimeInformationType

#	Description	Format
1	Sensing	SensingType
2	Abs_Orbit Absolute Orbit Number at sensing stop and start time.	AbsOrbitType

Table 10: TimeInformationType Specification

3.1.2.7. SensingType

#	Description	Format
1	Start	LongTimeType

#	Description	Format
	UTC=yyyy-mm-ddThh:mm:ss.uuuuuu Can contain a 'not applicable' (N/A) value: UTC=0000-00-00T00:00:00.000000	
2	Stop UTC=yyyy-mm-ddThh:mm:ss.uuuuuu Can contain a 'not applicable' (N/A) value: UTC=9999-99-99T99:99:99.999999	LongTimeType

Table 11: SensingType Specification

3.1.2.8. *AbsOrbitType*

#	Description	Format
1	Start	xs:integer
2	Stop	xs:integer

Table 12: AbsOrbitType Specification

3.2. Data Structures common to DBL files

There are no complex nor simple types common to all DBL files. Instead, some specific types have been defined per product type and they are described in following sections.

4. EGG Specific Data Structures

This section contains the data structures of the XML schemas used to represent the information of the GOCE L2 products associated to the EGG instrument.

4.1. Data Structures for file types in HDR format

The data structures have been classified by product type in the following sub-sections:

4.1.1. EGG_NOM_2_HDR

Next figure provides an overview of how the high level complex structures and basic types are organised to describe the information of an EGG_NOM_2 product type in HDR format:

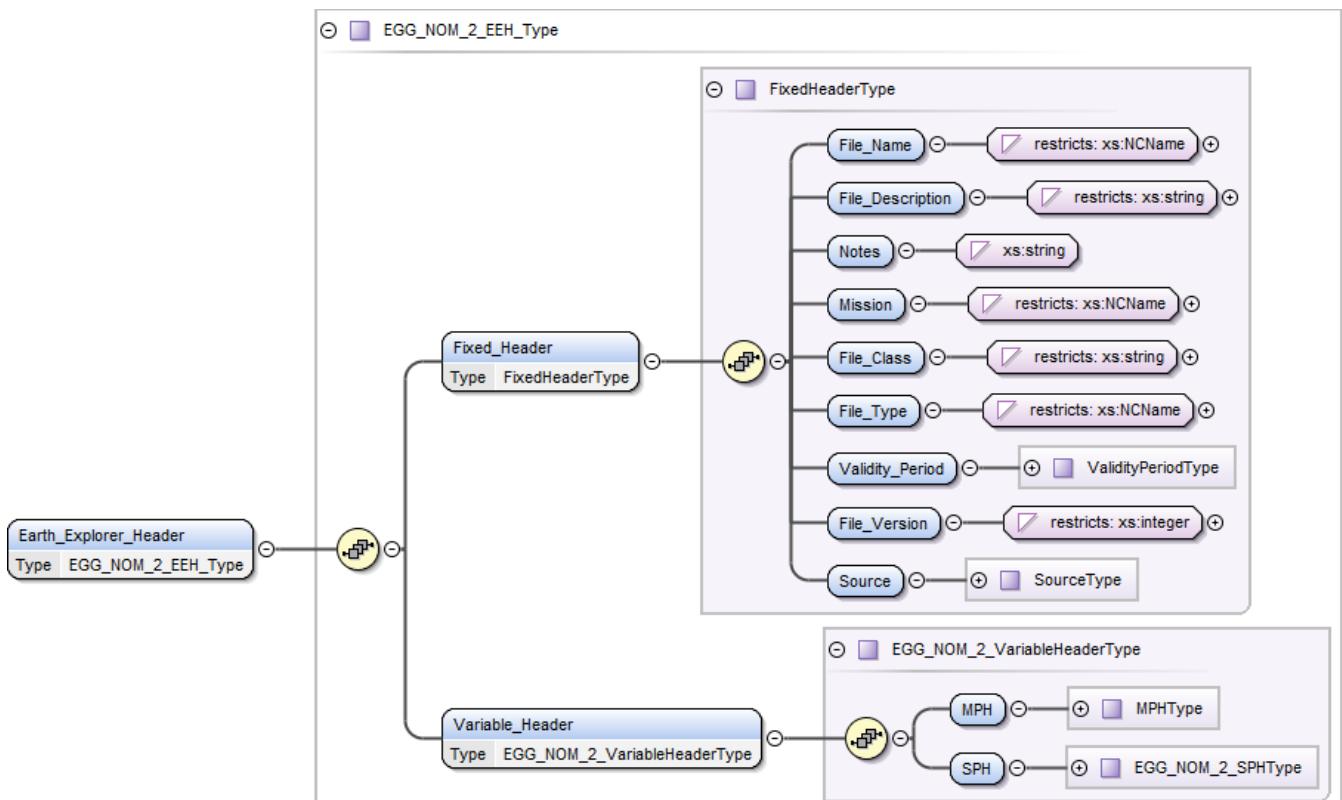

Figure 1: EGG_NOM_2_HDR organisation overview

A detailed description of each complex type used for the representation information of this product type is given below:

4.1.1.1. Root Element

#	Name/Description	Format
1	Earth_Explorer_Header The XML Header file contains information identifying the product and is easy to read as	EGG_NOM_2_EEH_Type

#	Name/Description	Format
	<p>based on a standard syntax accessed by common tools available for visualizing its content.</p> <p>The XML header file consists of:</p> <ul style="list-style-type: none"> * A fixed header * A variable header <p>The Fixed Header (hereafter called Standard GOCE Header) is the common header for all files produced by the HPF.</p> <p>The Variable Header (hereafter called Product Header) is the header with the format and content depending on the file type and kind of product.</p>

4.1.2. EGG_TRF_2_HDR

Next figure provides an overview of how the high level complex structures and basic types are

organised to describe the information of an EGG_TRF_2 product type in HDR format:

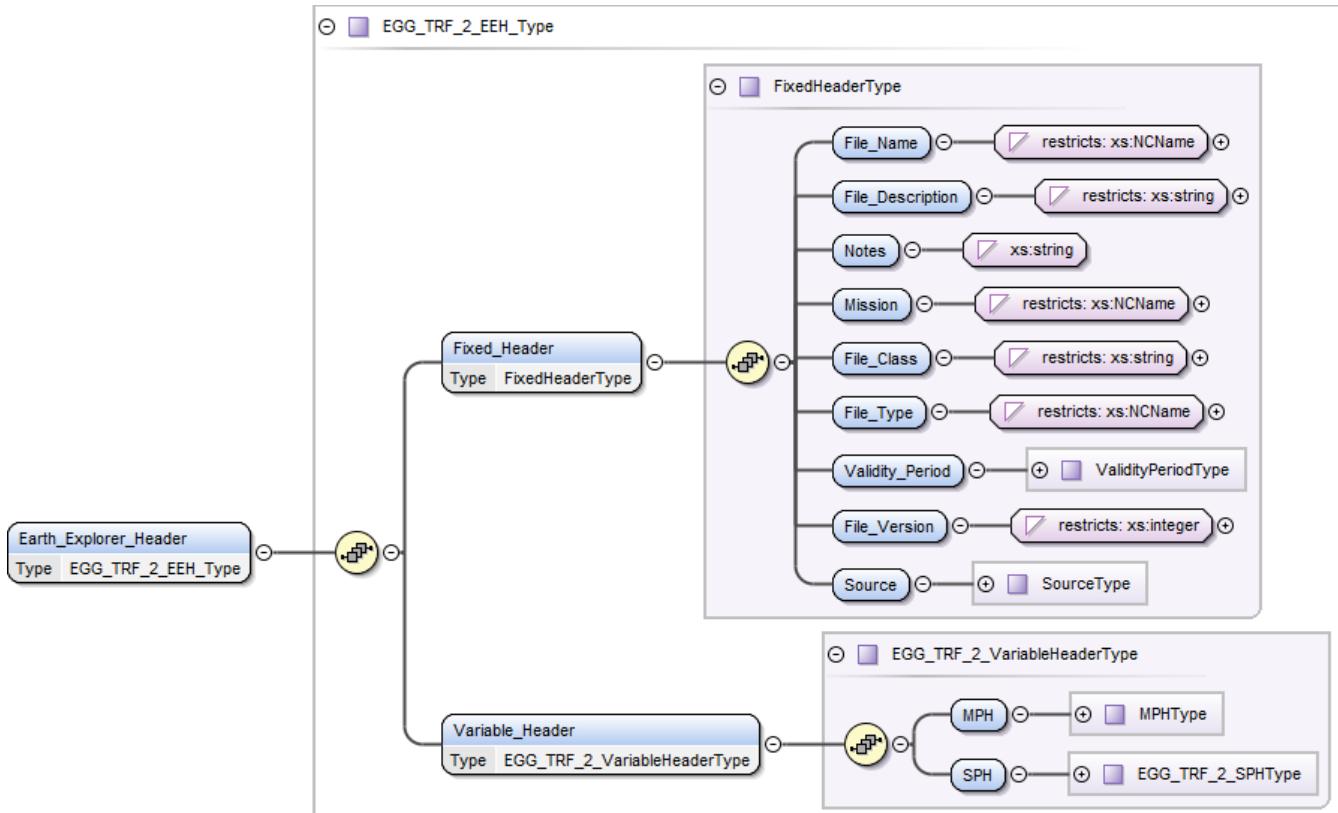

Figure 2: EGG_TRF_2_HDR organisation overview

A detailed description of each complex type used for the representation information of this product type is given below:

4.1.2.1. Root Element

#	Name/Description	Format
1	Earth_Explorer_Header The XML Header file contains information identifying the product and is easy to read as based on a standard syntax accessed by common tools available for visualizing its content. The XML header file consists of: * A fixed header * A variable header The Fixed Header (hereafter called Standard GOCE Header) is the common header for all files produced by the HPF. The Variable Header (hereafter called Product	EGG_TRF_2_EEH_Type

#	Name/Description	Format
	Header) is the header with the format and content depending on the file type and kind of product.

4.1.3. EGM_GOC_2_HDR

Next figure provides an overview of how the high level complex structures and basic types are organised to describe the information of an EGM_GOC_2 product type in HDR format:

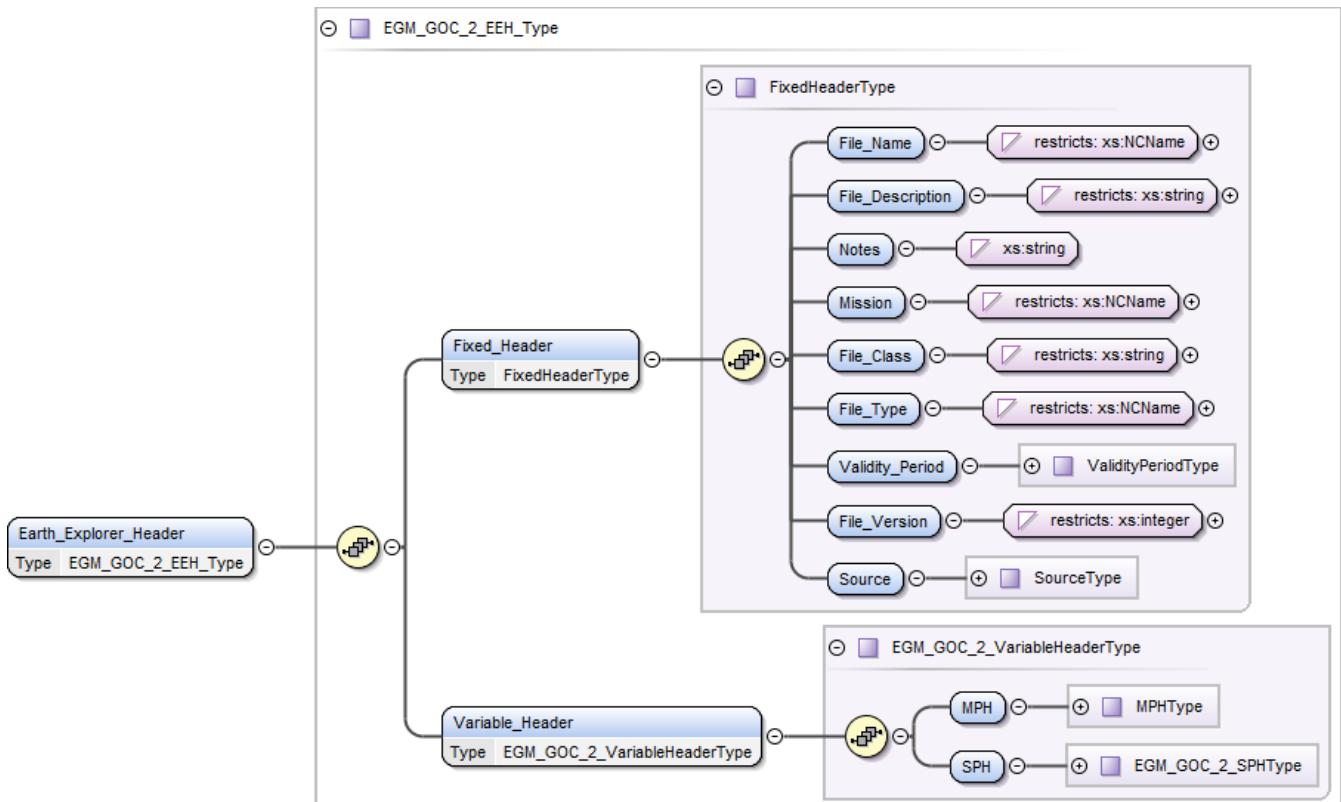

Figure 3: EGM_GOC_2_HDR organisation overview

A detailed description of each complex type used for the representation information of this product type is given below:

4.1.3.1. Root Element

#	Name/Description	Format
1	Earth_Explorer_Header The XML Header file contains information identifying the product and is easy to read as based on a standard syntax accessed by common tools available for visualizing its content. The XML header file consists of: * A fixed header * A variable header The Fixed Header (hereafter called Standard GOCE Header) is the common header for all files produced by the HPF. The Variable Header (hereafter called Product Header) is the header with the format and content depending on the file type and kind of product.	EGM_GOC_2_EEH_Type

Table 43: Earth_Explorer_Header Specification

4.2.3. EGM_GOC_2_DB_L

Next provides an overview of how the high level complex structures and basic types are organised to describe the information of an EGM_GOC_2 product type in DBL format:

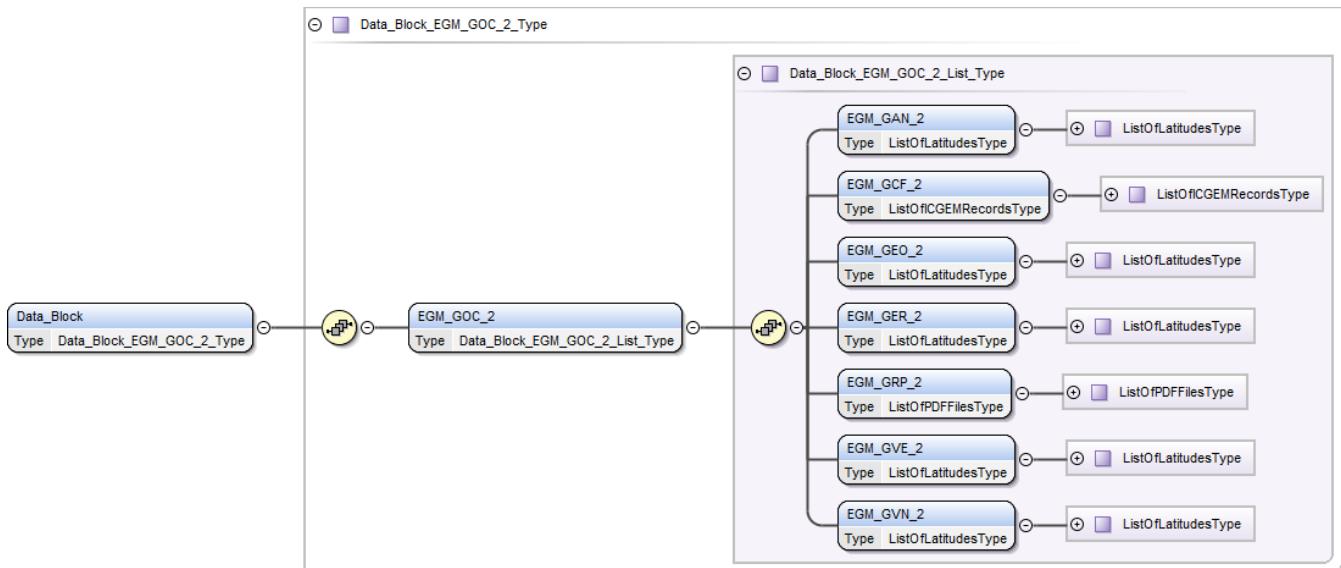

Figure 6: EGM_GOC_2_DBL organisation overview

A detailed description of each complex type used for the representation information of this product type is given below:

4.2.3.1. Root Element

#	Name/Description	Format
1	<p>Data_Block The EGM_GOC_2 products contain GOCE gravity field solutions in different representations. As derived quantities grids of geoid heights, gravity anomalies and deflections of the vertical are additionally included in the following sub-products:</p> <p>EGM_GAN_2 : Gravity anomalies.</p> <p>EGM_GCF_2 : The elementary sub-product is a spherical harmonic series of the gravitational potential of the Earth up to a specific degree and order.</p> <p>EGM_GEO_2 : Geoid heights.</p> <p>EGM_GER_2 : The full variance-covariance matrix of the coefficients is propagated to geoid height errors on a grid.</p> <p>EGM_GRP_2 : Further-on a quality report based on an extensive product validation.</p>	Data_Block_EGM_GOC_2_Type

#	Name/Description	Format
	<p>EGM_GVE_2 : Deflections of the vertical</p> <p>EGM_GVN_2 : Deflections of the vertical</p> <p>Representation: The gravity field is provided as spherical harmonic series up to a specific degree and order. Derived quantities are provided on equi-angular grids. The quality report is provided in PDF format.</p> <p>Reference Frame: EFRF</p> <p>Reference System: GRS80 reference ellipsoid for geoid heights (and errors), gravity anomalies and deflections of the vertical.</p> <p>Time System: Not applicable</p> <p>Spatial Coverage: Spherical harmonic series: global by definition Grids in the area +/-83° latitude: limited by GOCE inclination (96,7°)</p> <p>Temporal Coverage: At least 1 measurement operational phase. It is planned to release one GOCE gravity field model for each measurement operational phase and the final model based on all GOCE data.</p> <p>Spatial Resolution: Spherical harmonic series are provided up to a maximum degree and order, which depends on the data coverage (approximately degree and order 250). Derived quantities are provided as point values on 30'x30' equi-angular grids.</p> <p>Temporal Resolution: Not applicable</p> <p>Units: Spherical harmonic coefficients are dimensionless, Geoid heights and standard deviations in [m], gravity anomalies in [m/s²], deflections of the vertical in [arcsec].</p> <p>Latency: 6 months after completion of each measurement operational phase</p>

5. SST Specific Data Structures

This section contains the data structures of the XML schemas used to represent the information of the GOCE L2 products associated to the SST instrument.

5.1. Data Structures for file types in HDR format

5.1.1. SST_PSO_2_HDR

Next provides an overview of how the high level complex structures and basic types are organised to describe the information of an SST_PSO_2 product type in HDR format:

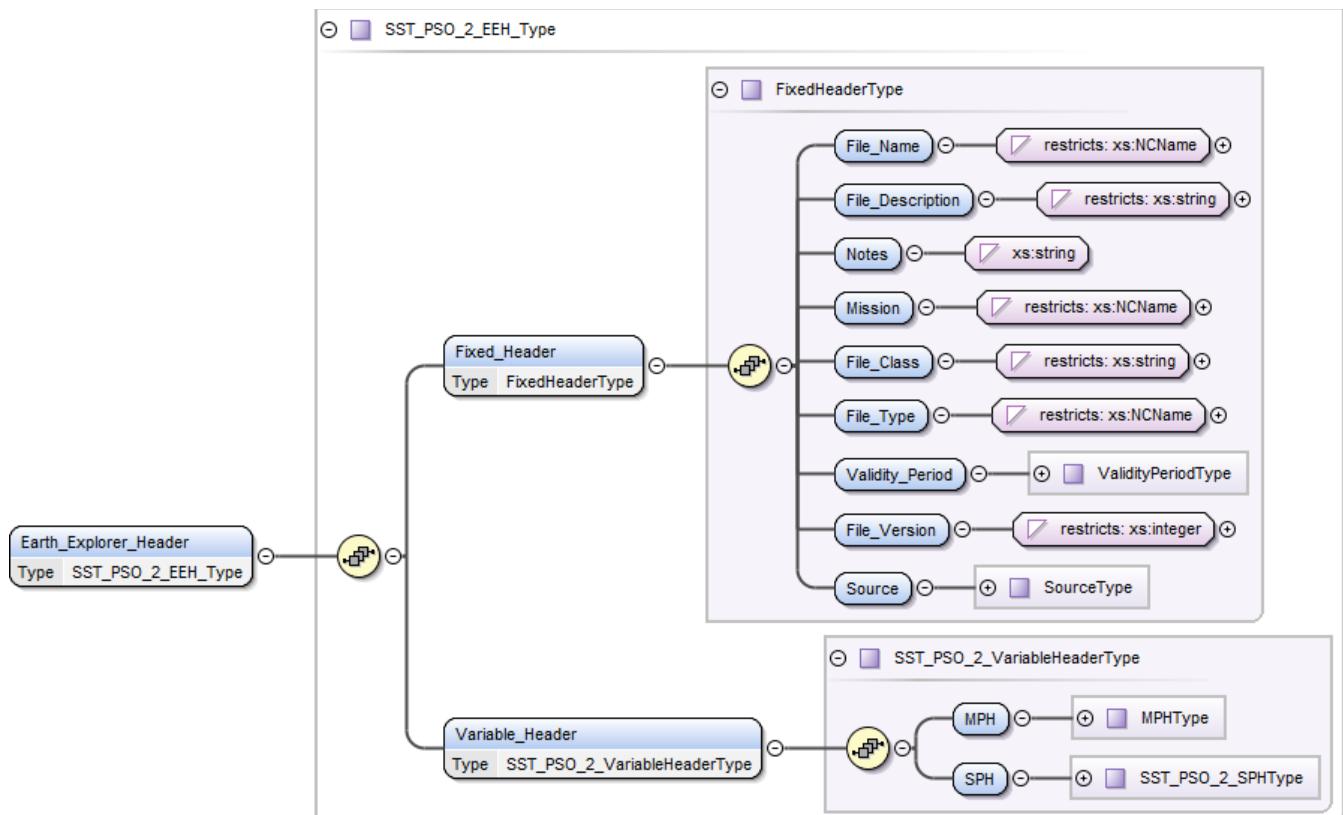

Figure 7: SST_PSO_2_HDR organisation overview

A detailed description of each complex type used for the representation information of this product type is given below:

5.1.1.1. Root Element

#	Name/Description	Format
1	Earth_Explorer_Header The XML Header file contains information identifying the product and is easy to read as based on a standard syntax accessed by common	SST_PSO_2_EEH_Type

#	Name/Description	Format
	<p>tools available for visualizing its content. The XML header file consists of:</p> <ul style="list-style-type: none"> * A fixed header * A variable header <p>The Fixed Header (hereafter called Standard GOCE Header) is the common header for all files produced by the HPF. The Variable Header (hereafter called Product Header) is the header with the format and content depending on the file type and kind of product.</p>

#	Name/Description	Format
1	List_of_PDF_Files	List_of_PDF_FilesType

Table 212: ListOfPDFFilesType Specification

5.2.1.2.29. List_of_PDF_FilesType

Attribute:

Name	Use	Type
count	required	xs:integer

#	Name/Description	Format
1	PDF_File The quality report (in PDF format) gives information about the accuracy of the PSO solutions. It also includes an independent quality assessment of the orbits using the SLR measurements to the GOCE satellite as well as a comparison with independently derived quick-look orbit solutions, referred to as Rapid Science orbits (RSO).	PDF_FileType

Table 213: List_of_PDF_FilesType Specification

5.2.1.2.30. PDF_FileType

#	Name/Description	Format
1	Type of the PDF File.	xs:base64Binary Attribute: Name: "encoding" Type: "xs:string" Use : "required"
