

ENVISAT  
ENVIAT Summer School 2003: Kyrölä: Refractive atmosphere

GOMOS

### Radiative transfer in refractive atmosphere

Erkki Kyrölä  
Finnish Meteorological Institute

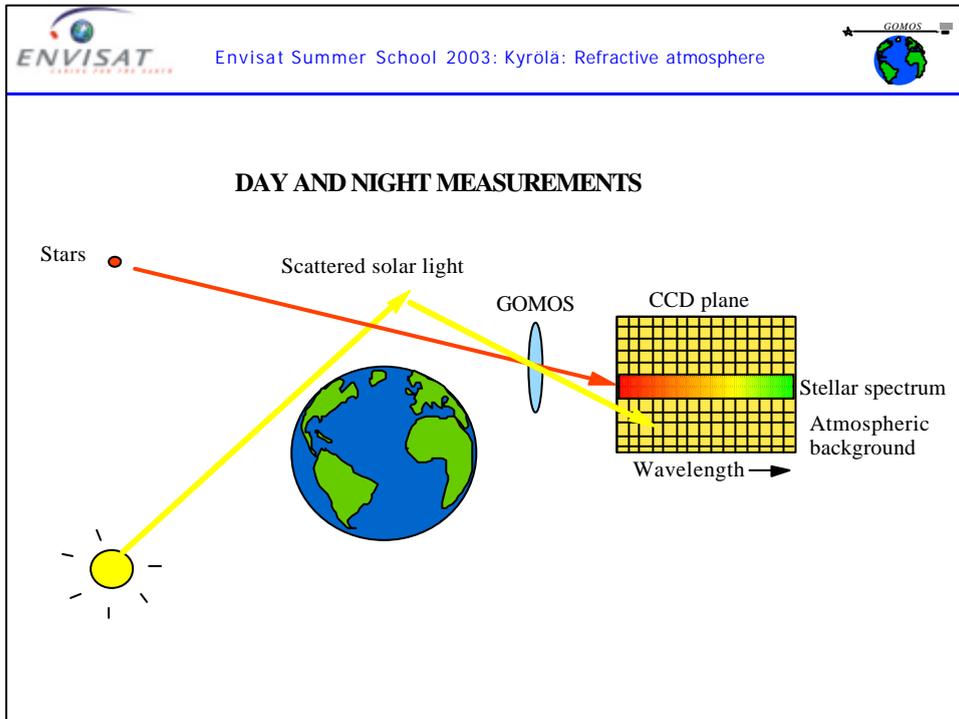

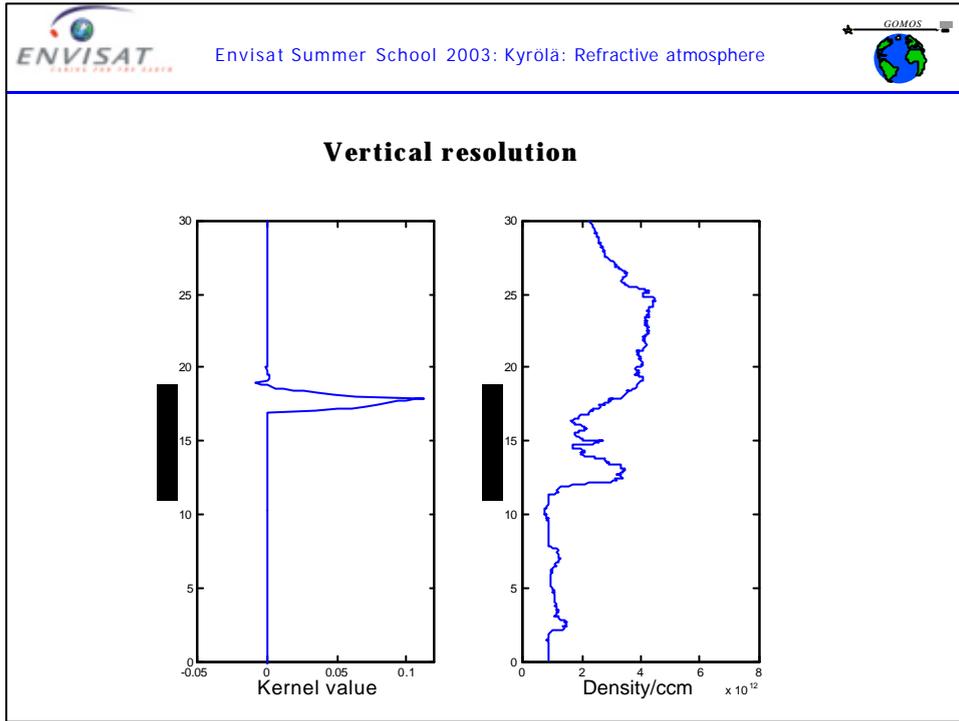

1. Background
2. Refractive effects
3. Scintillations

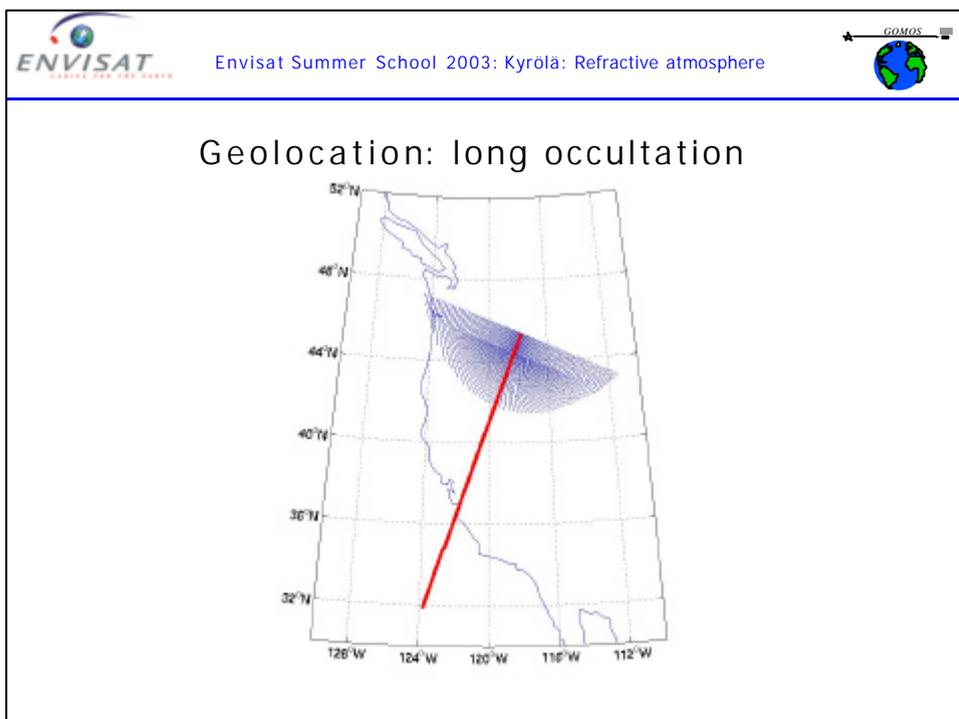

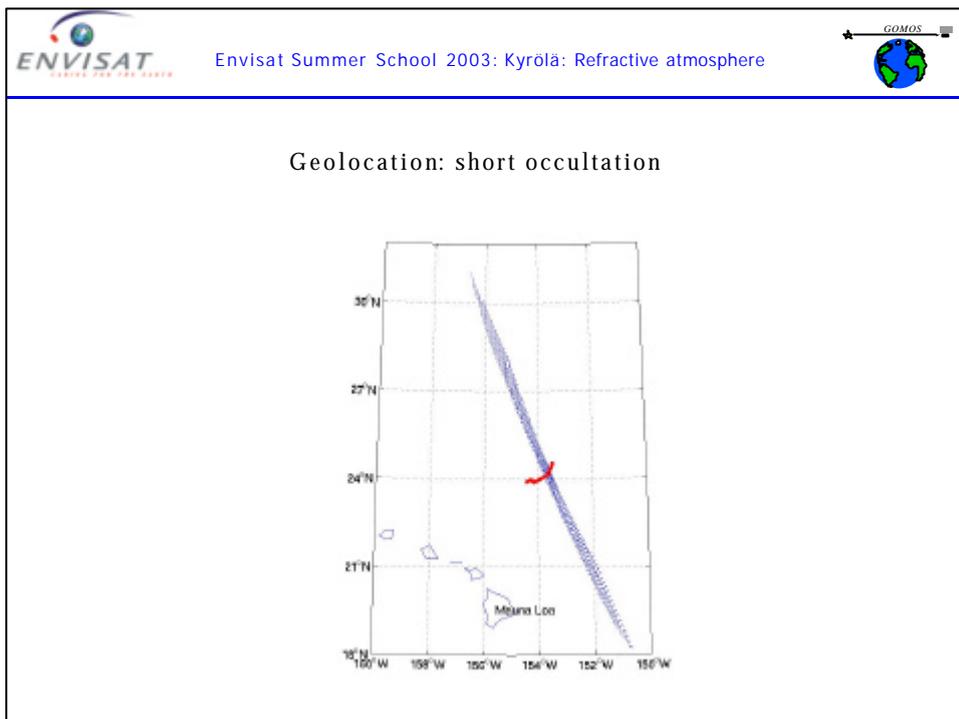

ENVISAT  
ENVIAT Summer School 2003: Kyrölä: Refractive atmosphere

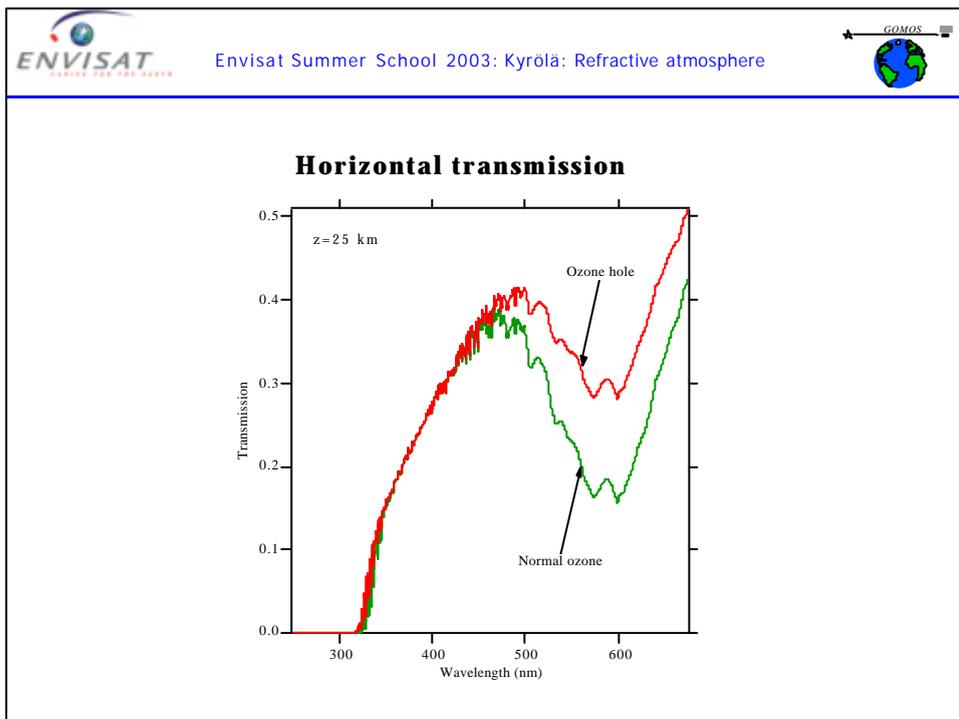

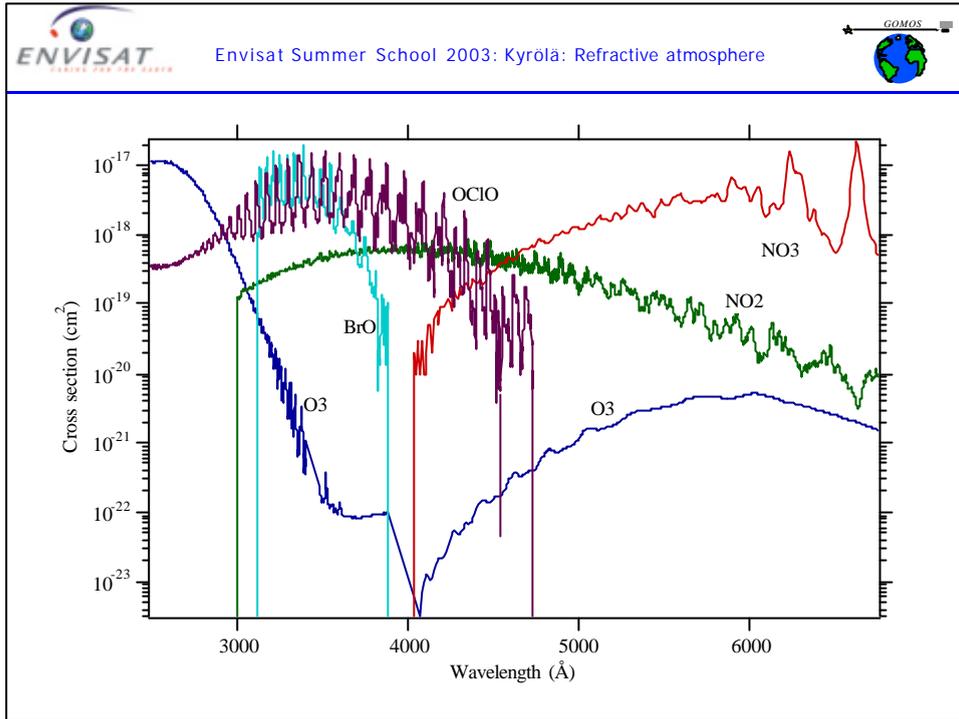

GOMOS

### Global Ozone Monitoring by Occultations of Stars

$$T(\lambda) = \frac{I_{occ}(\lambda)}{I_{ref}(\lambda)}$$

ENVISAT  
 Envisat Summer School 2003: Kyrölä: Refractive atmosphere

GOMOS

### Measurement physics: refractive dilution

Increasing density gradient

differential refraction

intensity reduction

ENVISAT  
 Envisat Summer School 2003: Kyrölä: Refractive atmosphere

GOMOS

### DILUTION TRANSMISSION

$$T_{\text{dil}}(\lambda, z) = \frac{A_1}{A_2} = \frac{1}{1 + L \frac{d\delta}{dz}}$$

Here:  
 L = distance between the tangent point and the satellite  
 d = refraction angle  
 z = tangent height

ENVISAT  
ENVIAT  
Centre for the Earth

Envisat Summer School 2003: Kyrölä: Refractive atmosphere

GOMOS

### Measurement physics: chromatic refraction

$T(\lambda, z, t)$   
 $T(\lambda, z, t)$

Different colors -different tangent altitudes

ENVISAT  
ENVIAT  
Centre for the Earth

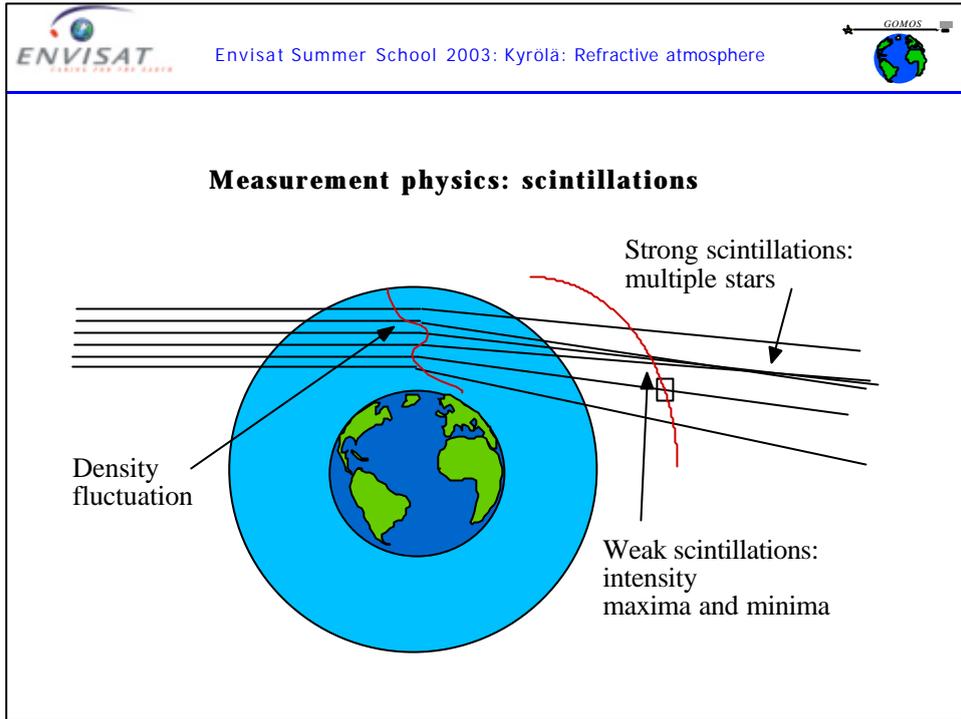

Envisat Summer School 2003: Kyrölä: Refractive atmosphere

GOMOS

### Measurement physics: chromatic time delay

$T(\lambda, z, t_1)$   
 $T(\lambda, z, t_2)$

Different colors -different refraction angles -different times

 Envisat Summer School 2003: Kyrölä: Refractive atmosphere 

Stellar occultation instrument  
UVISI  
on MSX-spacecraft

UVISI by APL of Johns Hopkins University

Several hundred occultations since 1996

 Envisat Summer School 2003: Kyrölä: Refractive atmosphere 

MSX movie  
(not included  
in this version)
