The 4<sup>th</sup> International Workshop on Advances in SAR Oceanography

# Oil spill detection and modelling: preliminary results for the Cercal Accident

Ricardo Tavares da Costa (CIIMAR)

Alberto Azevedo (LNEC – DHA/NEC)

José da Silva (FCUP/CIIMAR)

Anabela Oliveira (LNEC- DHA/NTI)

Prof. José da Silva contact: [jdasilva@fc.up.pt](mailto:jdasilva@fc.up.pt)

18-22 June 2012 | Tromsø, Norway

## MOTIVATION

1. Oil spills have high environmental and social-economical impacts;
2. Need for preparedness and capacity building in case of an oil spill;
3. Demand for tools with high level of detail, high performance and results in a useful time period to enhance prevention and mitigation efforts on the ocean, coastal areas and estuaries;
4. Demand for knowledge to conduct better adaptation and to adopt fairer compensations measures
5. Opportunity to advance the knowledge in oceanographic and atmospheric phenomena

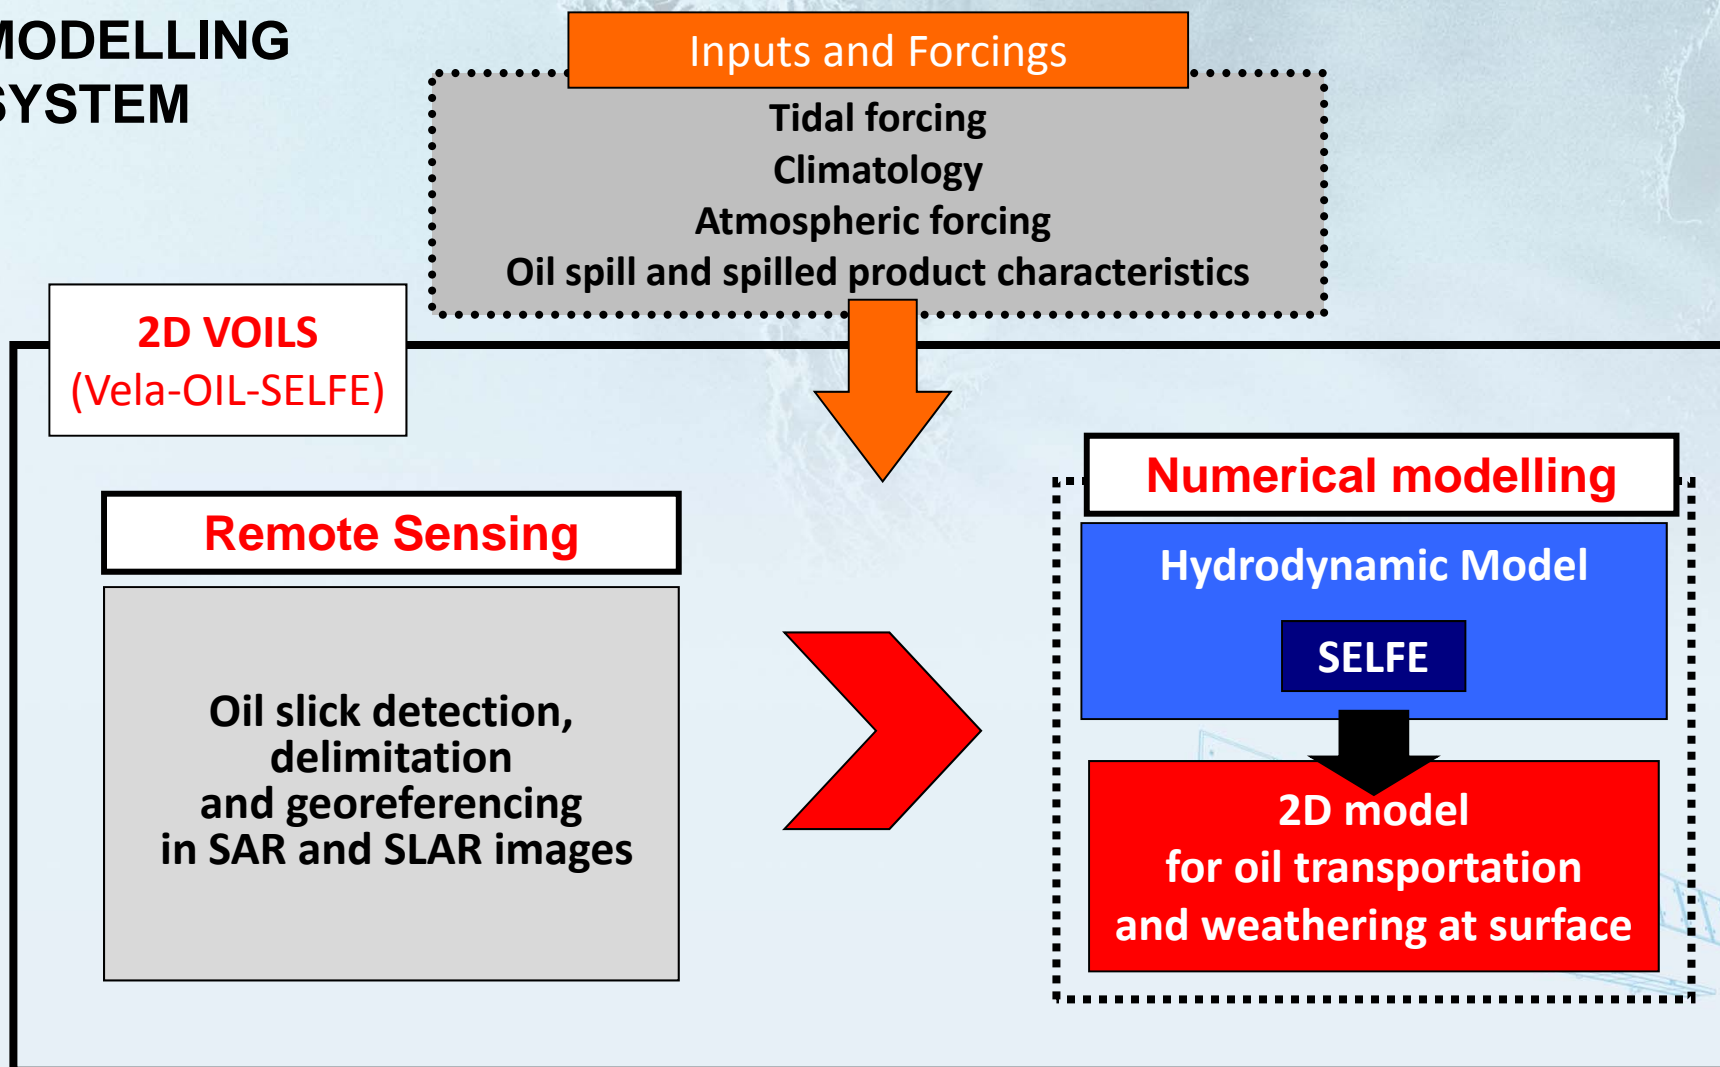

## OBJECTIVES

1. Development of a multiscale coupled (hydrodynamics + oil transport and weathering) modelling system;
2. Oil slick detection and delimitation based on SAR and SLAR images;
3. Oil spill risk analysis for the Portuguese coast.

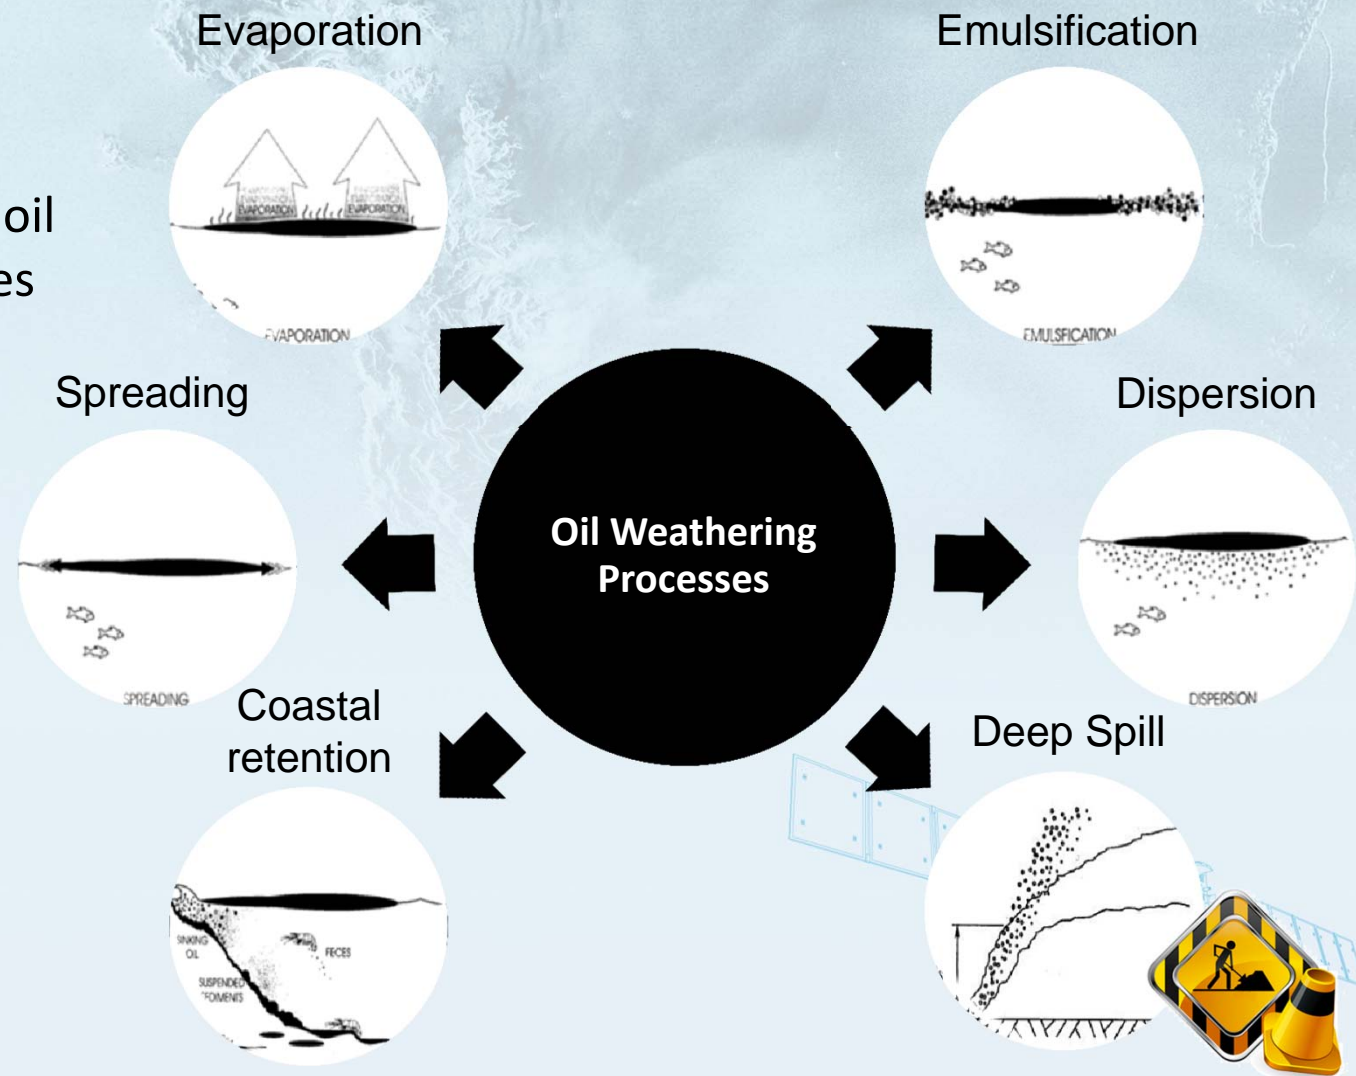

## MODELLING SYSTEM

## MODELLING SYSTEM (cont.)

Implemented oil weathering processes

# REMOTE SENSING EXAMPLE

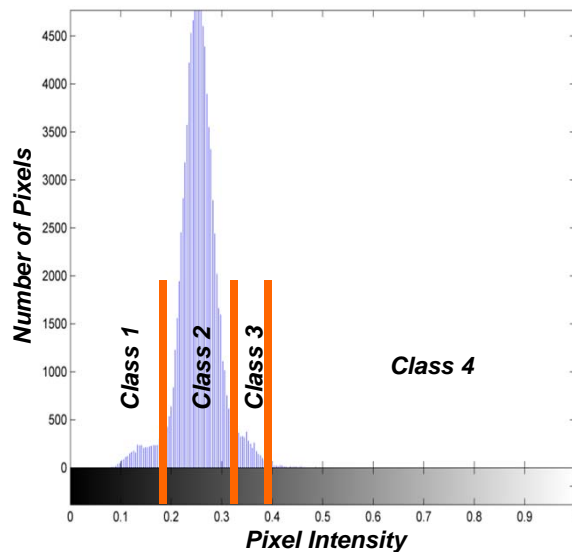

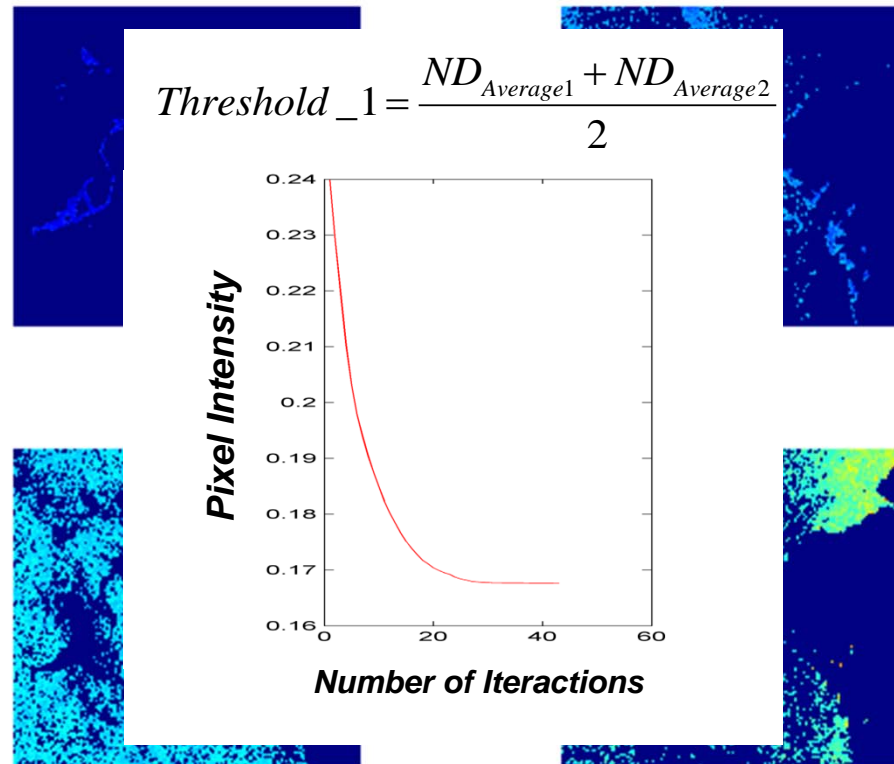

K-means clustering  
algorithm for slick  
detection and  
delimitation

$$ND_{Average1} = \frac{1}{nPixels_{C1}} \sum_{i=1}^{nPixels_{C1}} ND_i$$

$$ND_{Average2} = \frac{1}{nPixels_{C2}} \sum_{i=1}^{nPixels_{C2}} ND_i$$

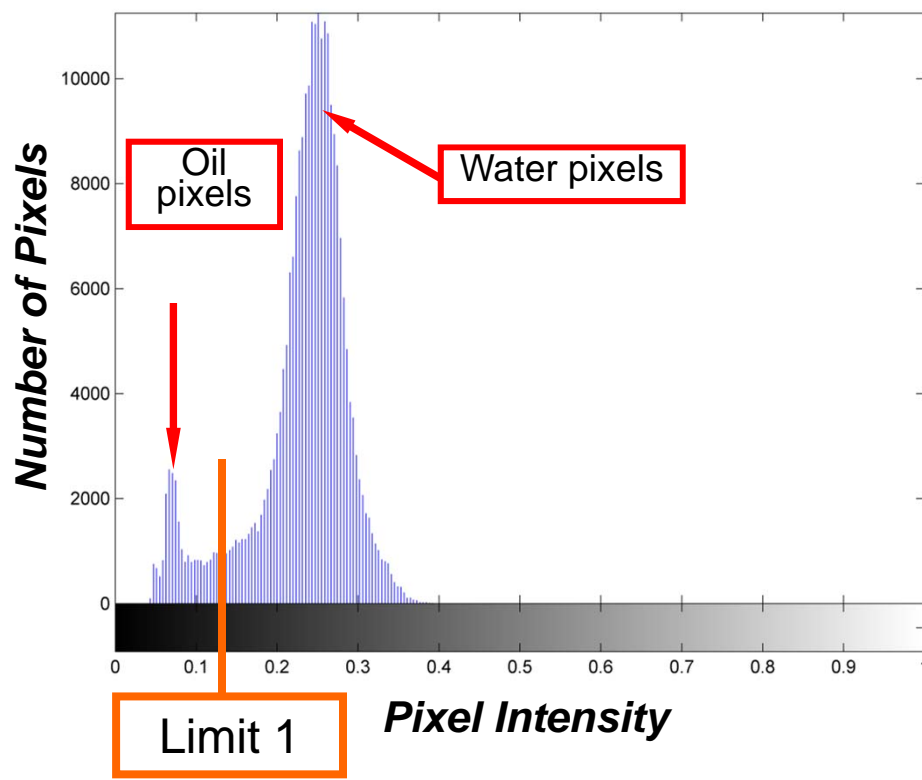

Class 1

Class 2

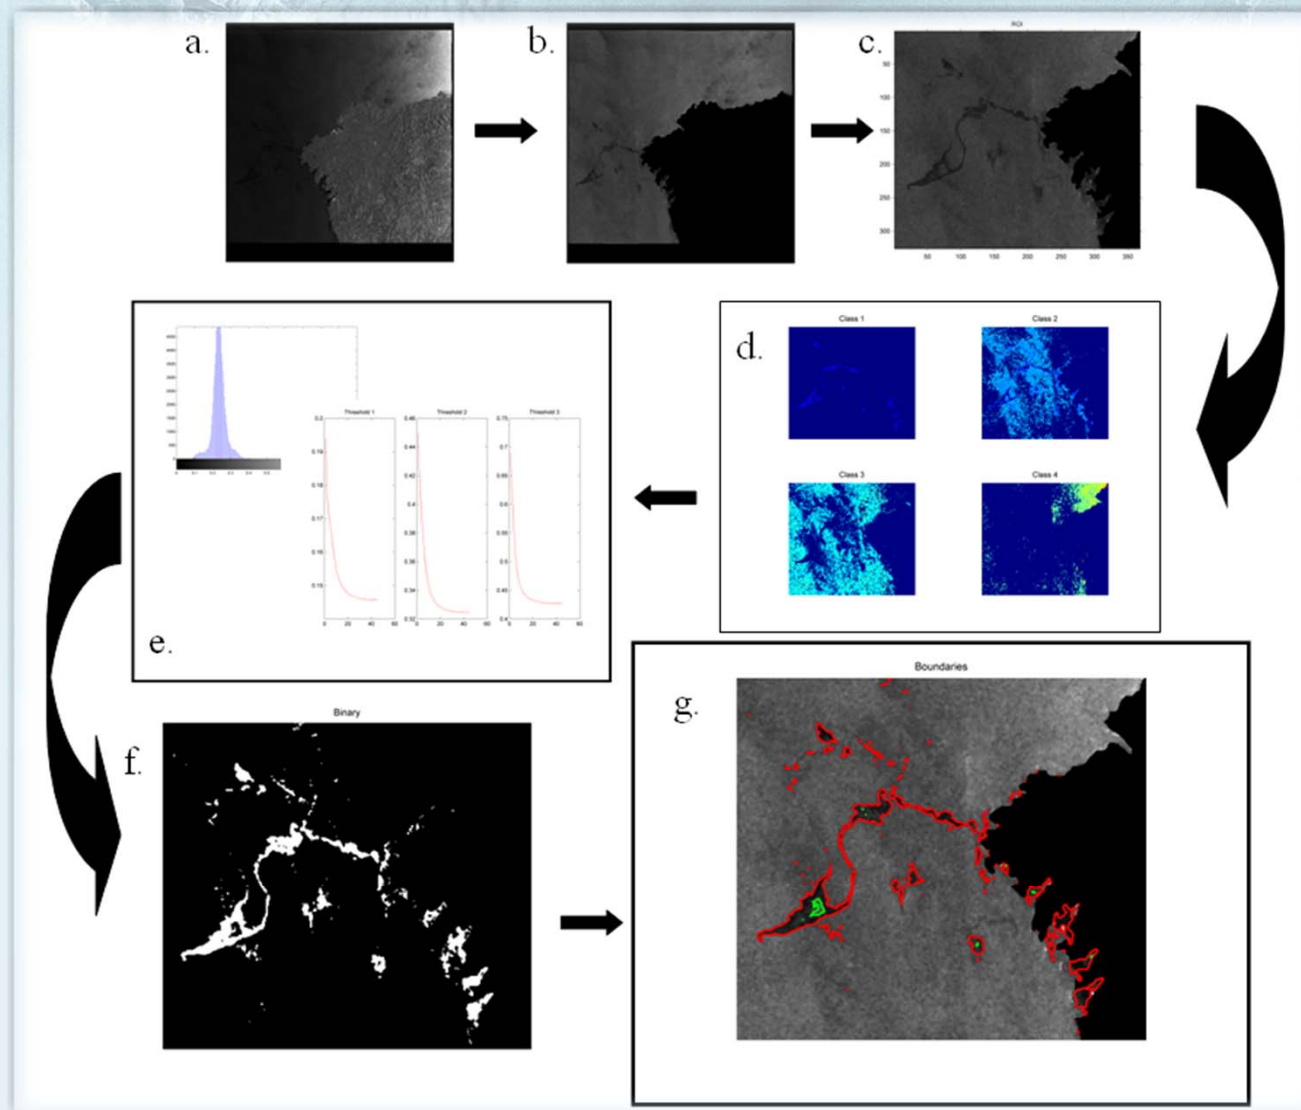

## REMOTE SENSING EXAMPLE (cont.)

Histogram analysis, binarization and slick delimitation in SAR images

## REMOTE SENSING EXAMPLE (cont.)

User defined number  
of classes

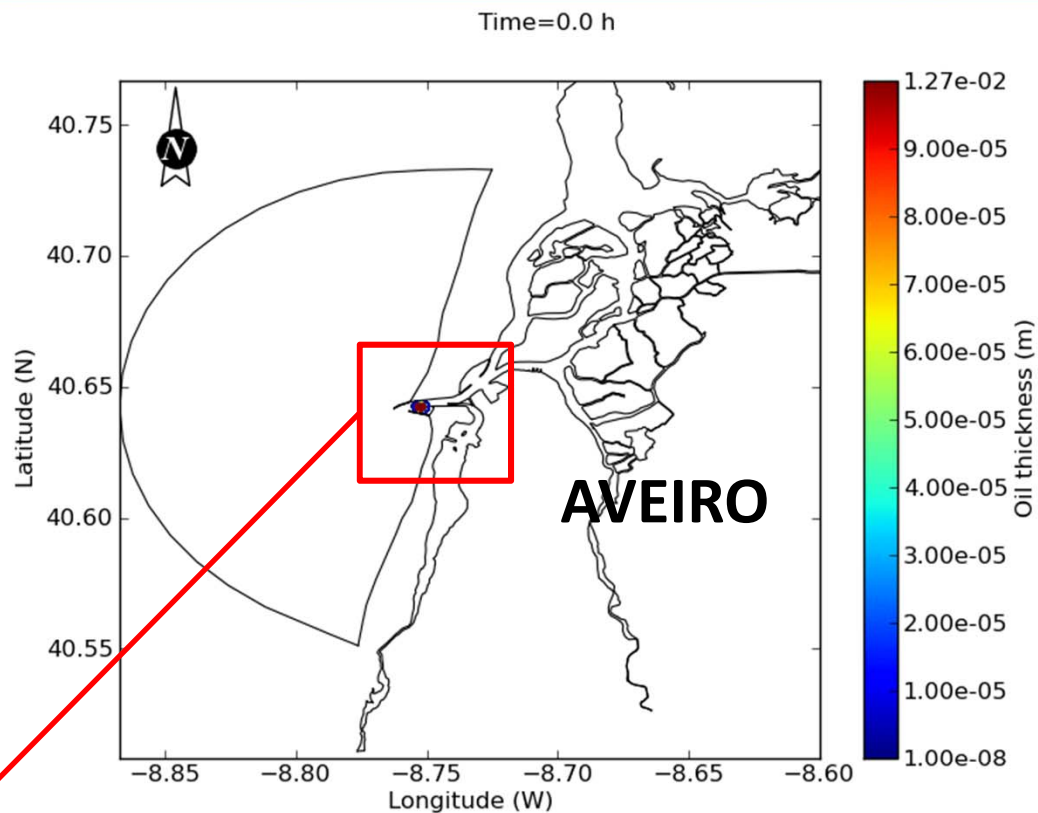

## NUMERICAL MODELLING EXAMPLE

2D coupled (hydrodynamics +  
oil transport and weathering)  
numerical model of the Ria de  
Aveiro, Portugal

Zoom plot  
Aveiro harbour

## CASE STUDY CERCAL

On the 2<sup>nd</sup> of October 1994, the Motor Tanker Cercal grounded and suffered major hull damage at the entrance of Leixões harbour spilling 1258 – 2500 t (82 000 t carried) of Arabian Light crude oil, 20 000 t were recovered. After the grounding, the damaged ship carried on its journey and polluted 45 km of coastline, particularly Lavadores beach

Imagem 1 segmentada

3, 4 or 5 classes?

## CASE STUDY CERCAL

04.10.1994

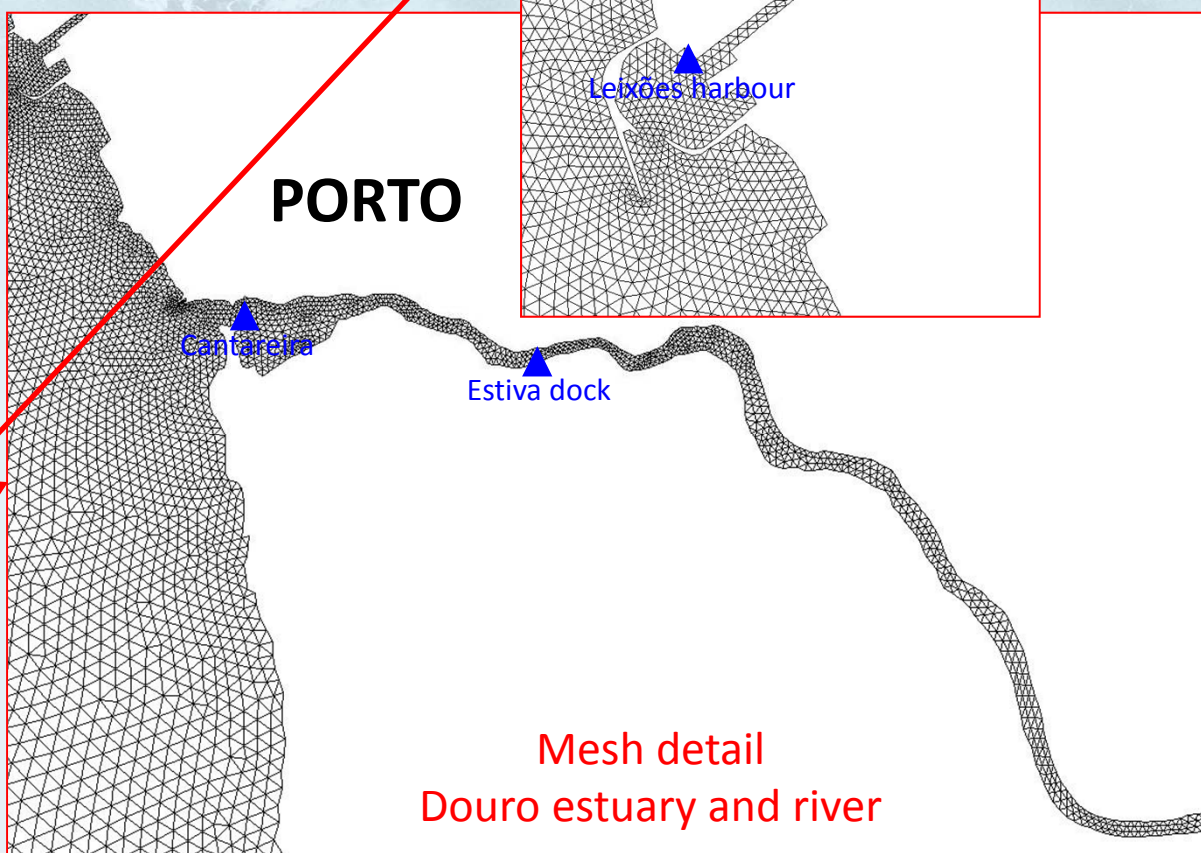

## CASE STUDY CERCAL (cont.)

Current developments on the hydrodynamic modelling

Unstructured mesh for the NW Iberian coast

▲ Tidal stations used for model calibration

Mesh detail  
Leixões harbour

Leixões harbour

PORTO

Cantareira

Estiva dock

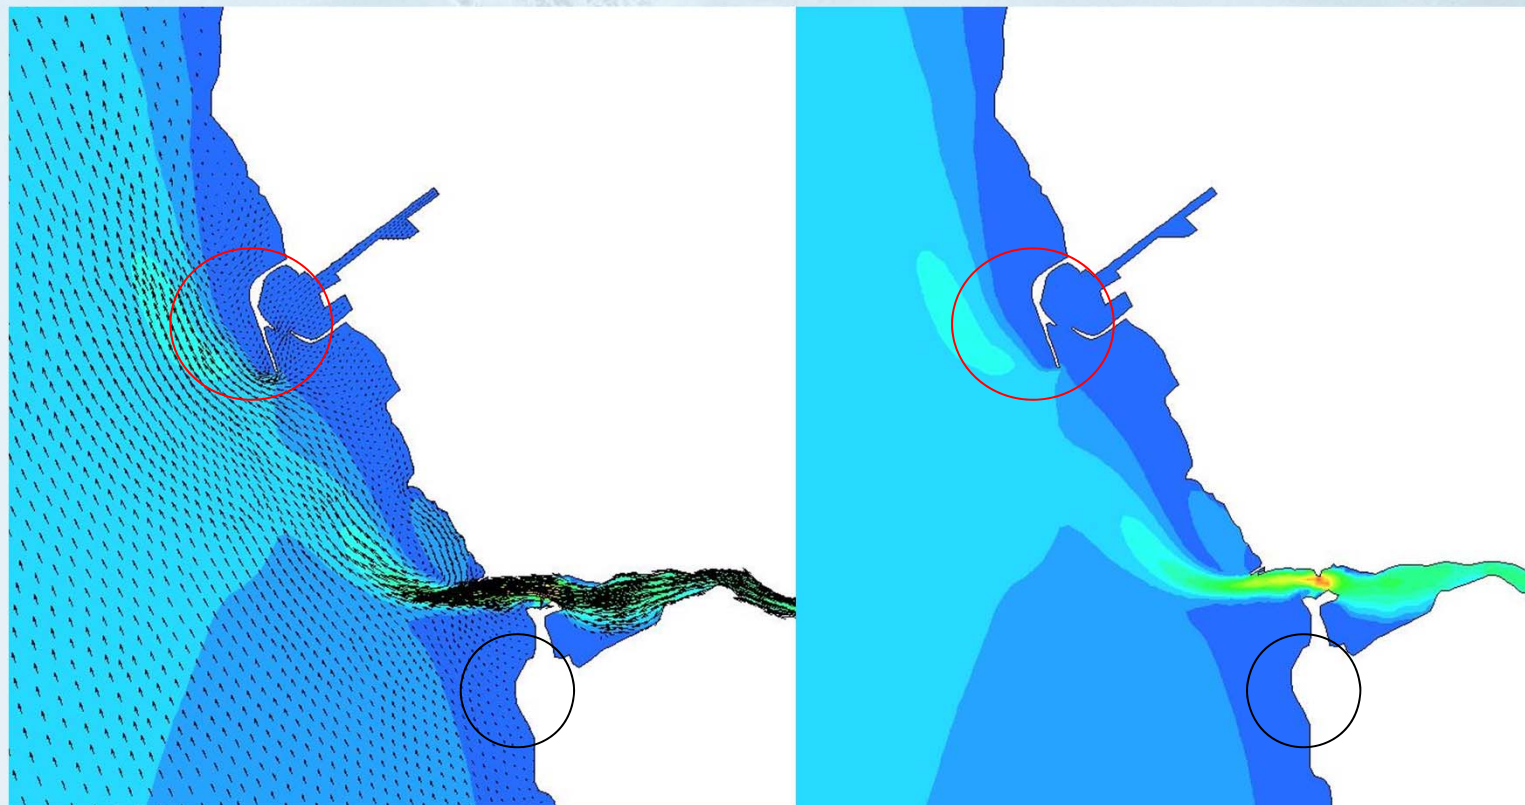

Mesh detail  
Douro estuary and river

## CASE STUDY CERCAL (cont.)

Preliminary velocity fields and velocity magnitudes during the accident

Red circles representing the accident location

Black circles representing the most impacted area, Lavadores beach

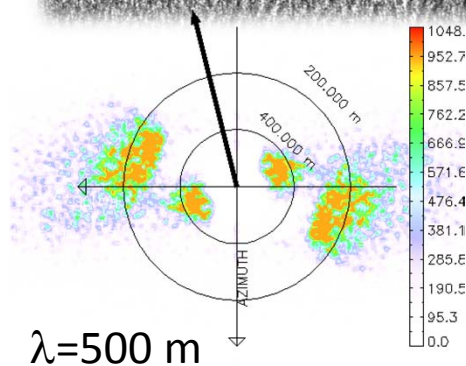

## CASE STUDY CERCAL (cont.)

Preliminary velocity fields one month after the accident

# CASE STUDY CERCAL (10.11.1994 11:21 UT)

one month after the accident

## SOME THEORY

## River plumes may generate nonlinear internal waves

10.04.2010 10:56 UTC

Rio Minho

Is the river outflow supercritical at some stage?

The present work has been conducted under an FCT/MCTES (PIDDAC) Portuguese funded project entitled PAC:MAN – “Pollution accidents in coastal areas: a Risk management system” (PTDC/AAC-AMB/113469/2008)
