Proba-V QWG #11, 25.-26.06.2020

ProbaV Cloud C2

Validation of cloud detection in different ProbaV resolutions

Kerstin Stelzer, Michael Paperin, Uwe Lange, Carsten Brockmann,
Brockmann Consult

3 Datasets

- 333m
 - Re-use existing dataset from Round Robin, analysis completed
 - 50 000 pixels from 50 products (minus 10 000 pixels used for training)
- 100 m
 - collection and analysis completed
 - 100 000 pixels from 55 products minus 10 000 provided to UVal
 - from this 25% were used for validation
- 1km
 - Collection and analysis completed
 - 26 600 pixels from 81 products

global distribution of reference pixels

333 m

1 km

100 m

333m collection surface characteristics

- **Clouds**

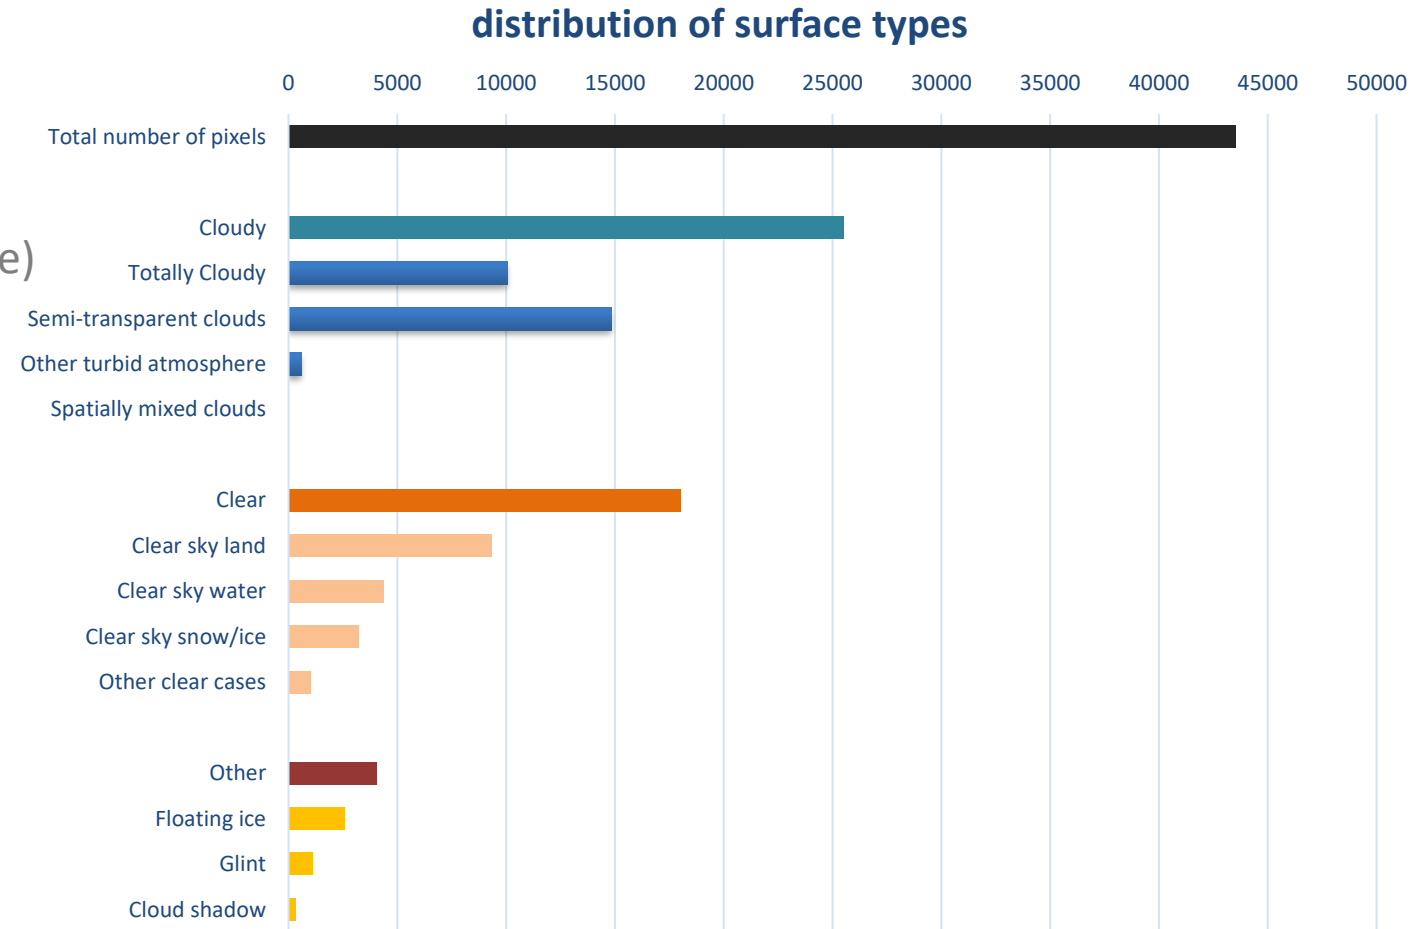

- Totally cloudy (opaque clouds)
- Semi-transparent clouds
- Other turbid atmosphere (e.g. dust, smoke)

- **Clear surfaces**

- Clear sky land
- Clear sky water
- Clear sky snow/ice
- Other clear cases

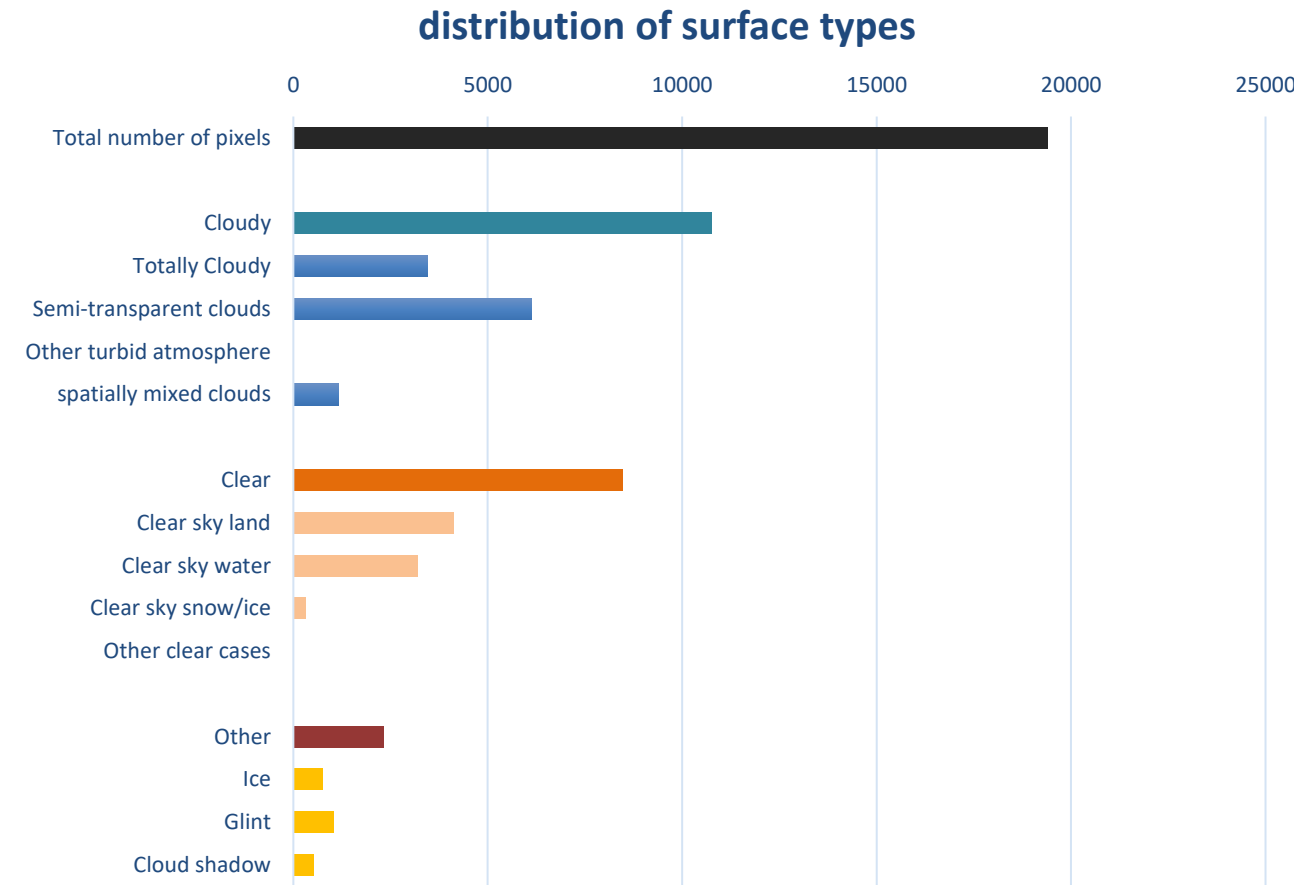

- **Other**

- Floating Ice
- Glint
- Cloud shadow

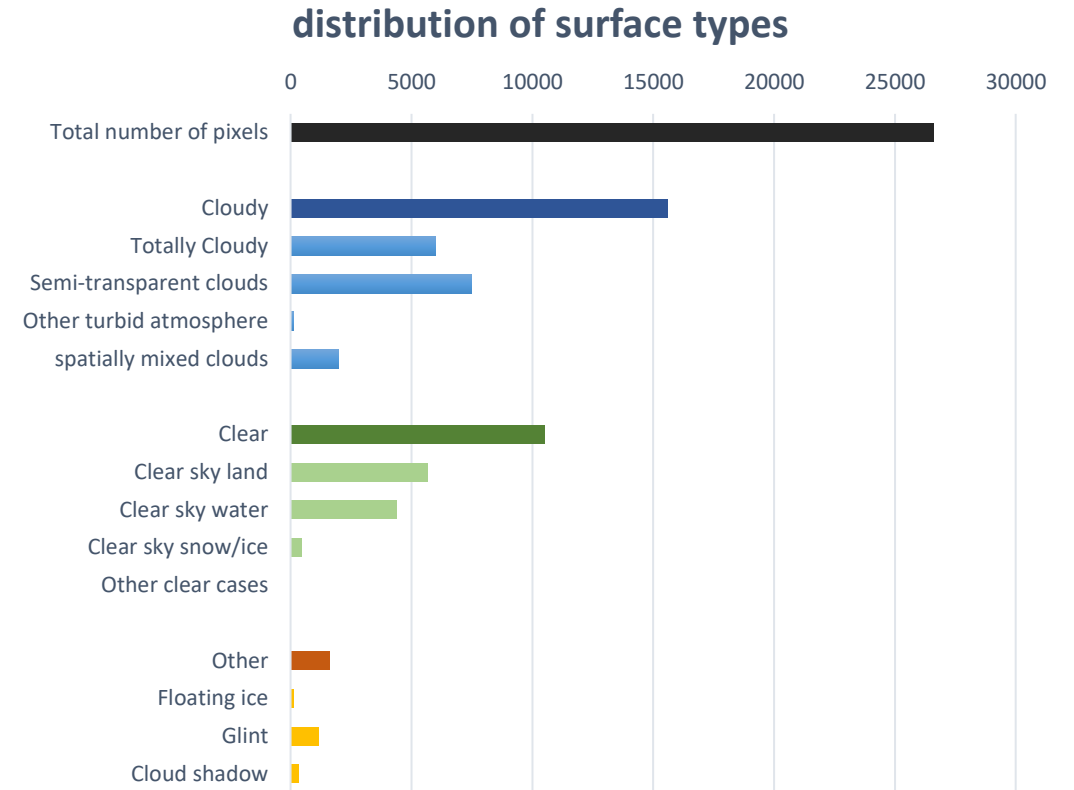

100m Final Collection - Statistics

- **Clouds 56.5%**
 - Totally cloudy (opaque clouds) 18%
 - Semi-transparent clouds 32%
 - Spatially mixed clouds 6.2%
 - Other turbid atmosphere (e.g. dust, smoke) 0.7%
- **Clear surfaces 41.7%**
 - Clear sky land 20.8%
 - Clear sky water 15.9%
 - Clear sky snow/ice 5%
- **Other 1.8%**

1km Final Collection - Statistics

- **Clouds 59%**
 - Totally cloudy (opaque clouds) 22%
 - Semi-transparent clouds 28%
 - Spatially mixed clouds 7.5%
 - Other turbid atmosphere (e.g. dust, smoke) 0.4%
- **Clear surfaces 39%**
 - Clear sky land 21%
 - Clear sky water 16%
 - Clear sky snow/ice 1.2%
- **Other 1.8%**

Visual inspection

- Assessment per randomly selected products
- Development of assessment criteria
 - - Cloud-free pixels are marked as clouds.
 - - Cloudy pixels (except very thin ones) are marked as clear sky.
 - - Well done cloud/snow mask.
 - - Thin and very thin clouds are **not** marked as clouds.
 - - Oversaturated cloud pixels are incorrectly identified as ice.
 - - A clear sky land/sea snow/ice pixels are marked as cloudy.
 - - The dark, melting clear sky ice pixels are **not** marked as such.
 - - Sun glint was incorrectly recognized as cloudy.
 - - Cloud-free salt lake (as well as dry lakes/ivers) pixels are incorrectly marked as cloudy or icy.
 - - Sand storm, dust, aerosols are masked as cloudy.
 - - Spatially-mixed snow covered pixels are **not** recognized as such.
 - - Shadow sizes are defined incorrectly.

24. PROBAV_L2A_20140321_132915_3_1KM_V103 (East of South America, Brazil)

A good cloud mask.
9,0

Visual inspection

- 1km: 81 products
- 100m: 80 products
- 333m: 22 products

1. PROBAV_L2A_20140321_012314_1_1KM_V103 (Pacific Ocean in the east of Kamchatka Peninsula)
● A well done cloud-, land snow, floating ice mask.

2. The same Fragment.

● Some clear sky land ice pixels are wrongly marked as cloudy.

3. The same Fragment.

● Some clear sky land ice pixels are wrongly marked as cloudy.

4. PROBAV_L2A_20140321_000131_1_1KM_V103 (New Caledonia, Vanuatu, Pacific Ocean)

● A well done cloud mask.

5. The same Fragment.

● Sun glint pixels are wrong recognized as cloudy.

6. PROBAV_L2A_20140321_000656_2_1KM_V103 (East Australia, Pacific Ocean)

● Oversaturated cloud pixels are incorrectly identified as ice.

...

Summary visual inspection

Overall assessment for different **cloud** types
(assessment if clouds are detected as cloud)

<i>Cloud type</i>	<i>Surface</i>	<i>SCMQR 100m</i>	<i>SCMQR 333m</i>	<i>SCMQR 1km</i>
Thick clouds		++	++	++
Small cumulus clouds	over land	+	+	++
	over water	+	+	+
	over water (at sun glint)	+	+	+
Semi-transparent clouds „usual“	over land, water	++	+	++
Sem-transparent clouds „very thin“	over land, water	o		o

Summary visual inspection

Overall assessment for different **surface** types
(assessment if clouds are detected as cloud)

<i>Clouds</i>	<i>Surface</i>	<i>SCMQR 100m</i>	<i>SCMQR 333m</i>	<i>SCMQR 1km</i>
Clouds over land (all cloud types)	over „usual“ land	++	++	++
Clouds	over desert	+	+	++
Clouds	over salt lake	+	+	+
Clouds	over urban area	+	+	+
Clouds	over ice/snow	+	+	+
Clouds over water (all cloud types)	over water	++	++	++
Clouds	over Inland water	++	++	+
Clouds	over floating ice	+	+	+
Clouds	over sun glint	+		+

Summary visual inspection

Overall assessment for clear surfaces
(assessment if clear surfaces are clear)

<i>Clear</i>	<i>Surface</i>	<i>SCMQR 100m</i>	<i>SCMQR 333m</i>	<i>SCMQR 1km</i>
Cloud free over land	over „usual“ land	++	+	++
	over desert	++	+	++
	over salt lake	o	o	o
	over urban area	+	+	+
	over ice/snow	o	+	o
Cloud free over water	over water	++	++	++
	over Inland water	++	++	++
	over floating ice	+	+	o

Summary 100m products

- The masks work very well for “clear” cases
 - approx. 85% of all examined cases
 - opaque and undoubtedly semi-transparent clouds the masks work well
 - for constant snow cover the masks work well.
 - fog is marked as a cloud
- moderately to satisfactorily in the cases of
 - very thin (but still recognizable) semi-transparent
 - spatially mixed clouds
 - for semi-transparent clouds over ice and over desert (less good over deserts)
- least well working (to failing)
 - Dark, slightly melting sea ice is recognized as free water, sometimes as clouds
 - Above cloud-free, dry or salted lakes and over the sun glint areas
 - Spatially mixed snow not recognized as snow
 - Sun glint often flagged as cloud
- No fog or sand dust was found in the example images and could not be assessed
- The presence of <! SM_FLAGS.GOOD_BLUE> -Flag changes the quality for snow and cloud masks, but especially and more often for snow mask so that the rating drops in such situations.
- Cloud shadow
 - appears irregularly and only marks a part of the shaded pixels.

Summary 1km products

- The masks work very well for “clear” cases
 - approx. 85% of all examined cases
 - opaque and undoubtedly semi-transparent clouds the masks work well indeed
 - for constant snow cover the masks work well indeed.
 - fog is marked as a cloud.
- moderately to satisfactorily in the cases of
 - very thin (but still recognizable) semi-transparent
 - spatially mixed clouds
 - for semi-transparent clouds over ice and over desert
 - haze is moderate recognized
 - Aerosols (mostly sand dust but also smoke) are sensibly recognized as cloud
- least well working (to failing)
 - Dark, slightly melting sea ice is recognized as free water.
 - Above cloud-free, dry or salted lakes and over the sun glint areas
- The presence of <! SM_FLAGS.GOOD_BLUE> -Flag changes the quality for snow and cloud masks, but especially and more often for snow mask so that the rating drops in such situations.
- Cloud shadow
 - appears irregularly and only marks a part of the shaded pixels.
