## TABLE OF CONTENTS

<b>7. AATSR PRODUCTS SPECIFICATIONS .....</b>	<b>15</b>
7.1 INSTRUMENT OVERVIEW .....	15
7.2 PRODUCTS OVERVIEW .....	17
7.2.1 Product Grid.....	18
7.3 LEVEL 0 PRODUCTS .....	19
7.3.1 AATSR Level 0 Product.....	19
7.3.1.1 Input Data .....	19
7.3.1.2 Auxiliary Data Used.....	19
7.3.1.3 Processing Performed.....	19
7.3.1.4 Product Structure .....	19
7.4 LEVEL 1B PRODUCTS.....	21
7.4.1 Gridded Brightness Temperature and Reflectance.....	21
7.4.1.1 Input Data .....	21
7.4.1.2 Auxiliary Data Used.....	21
7.4.1.3 Processing Performed.....	22
7.4.1.4 Product Structure .....	22
7.4.1.5 Main Product Header .....	23
7.4.1.6 Specific Product Header .....	23
7.4.1.7 Data Sets.....	30
7.4.1.7.1 Summary Quality ADS (SQADS).....	30
7.4.1.7.2 Grid Pixel Latitude and Longitude and Topographic Corrections ADS (LADS)....	31
7.4.1.7.3 Scan Pixel x and y ADSR .....	32
7.4.1.7.4 Nadir View Solar Angles ADS .....	32
7.4.1.7.5 Forward View Solar Angles ADS .....	33
7.4.1.7.6 Visible Calibration Coefficients ADS .....	33
7.4.1.7.7 Scan and Pixel Number, Nadir View Image ADS.....	33
7.4.1.7.8 Scan and Pixel Number, Forward View Image ADS.....	33
7.4.1.7.9 Brightness Temperature and Reflectance MDSs.....	34
7.4.1.7.10 Confidence Words, Nadir View MDS .....	35
7.4.1.7.11 Confidence Words, Forward View MDS .....	35
7.4.1.7.12 Cloud Flags, Nadir View MDS.....	35
7.4.1.7.13 Cloud Flags, Forward View MDS.....	36
7.4.1.8 Size Estimate.....	36
7.5 LEVEL 2 PRODUCTS .....	39
7.5.1 Gridded Sea Surface Temperature Product.....	39
7.5.1.1 Input Data .....	39
7.5.1.2 Auxiliary Data Used.....	39
7.5.1.3 Processing Performed.....	39
7.5.1.4 Product Structure .....	39
7.5.1.5 Main Product Header .....	40
7.5.1.6 Specific Product Header .....	40
7.5.1.7 Data Sets.....	41
7.5.1.7.1 Summary Quality ADS (SQADS).....	41
7.5.1.7.2 Grid Pixel Latitude and Longitude and Topographic Correction ADS (LADS) ....	42
7.5.1.7.3 Scan Pixel x and y ADS.....	42
7.5.1.7.4 Nadir View Solar Angles ADS .....	42
7.5.1.7.5 Forward View Solar Angles ADS .....	42
7.5.1.7.6 Scan and Pixel Number, Nadir View Image ADS.....	43
7.5.1.7.7 Scan and Pixel Number, Forward View Image ADS.....	43
7.5.1.7.8 Distributed Product MDS.....	43
7.5.1.8 Size Estimate.....	44
7.5.2 AATSR L2P (UPA-L2P-ATS_NR__2P) Product .....	46
7.5.3 AATSR Averaged Surface Temperature (AST) Product .....	47
7.5.3.1 Description.....	47
7.5.3.2 Input Data .....	47

7.5.3.3	Auxiliary Data Used .....	47
7.5.3.4	Processing Performed .....	47
7.5.3.5	Product Structure.....	47
7.5.3.6	Main Product Header .....	48
7.5.3.7	Specific Product Header.....	48
7.5.3.8	Data Sets .....	50
7.5.3.8.1	SST Record, 50km cell MDS .....	50
7.5.3.8.2	SST Record, 17km cell MDS .....	50
7.5.3.8.3	SST Record 10 arc minute cell MDS .....	51
7.5.3.8.4	SST Record 30 arc minute cell MDS .....	51
7.5.3.8.5	LST Record 50km cell MDS .....	52
7.5.3.8.6	LST Record 17km cell MDS .....	52
7.5.3.8.7	LST Record 10 arc minute cell MDS .....	53
7.5.3.8.8	LST Record 30 arc minute cell MDS .....	53
7.5.3.8.9	BT/TOA Land Record, 50km cell MDS.....	53
7.5.3.8.10	BT/TOA Land Record, 17km cell MDS.....	56
7.5.3.8.11	BT/TOA Land Record, 10 arc minute cell MDS .....	59
7.5.3.8.12	BT/TOA Land Record, 30 arc minute cell MDS .....	59
7.5.3.8.13	BT/TOA Sea Record, 50km cell MDS .....	59
7.5.3.8.14	BT/TOA Sea Record, 17km cell MDS .....	62
7.5.3.8.15	BT/TOA Sea Record, 10 arc minute cell MDS .....	63
7.5.3.8.16	BT/TOA Sea Record, 30 arc minute cell MDS .....	64
7.5.3.8.17	Pixel Threshold Failure Flags .....	64
7.5.3.9	Size Estimate .....	65
7.5.4	AATSR Spatially Averaged Surface Temperature (AST) Product for Meteo Users .....	66
7.5.4.1	Description .....	66
7.5.4.2	Input Data.....	66
7.5.4.3	Auxiliary Data Used .....	66
7.5.4.4	Processing Performed .....	66
7.5.4.5	Product Structure.....	66
7.5.4.6	Main Product Header .....	66
7.5.4.7	Specific Product Header.....	66
7.5.4.8	Data Sets .....	67
7.5.4.8.1	SST Record 10 arc minute cell MDS .....	67
7.5.4.9	Size Estimate .....	68
7.5.5	ARC L2P Gridded Sea Surface Temperature Product .....	69
7.5.5.1	Description .....	69
7.5.5.2	Input Data.....	69
7.5.5.3	Auxiliary Data Used .....	69
7.5.5.4	Processing Performed .....	70
7.5.5.5	Product Structure.....	70
7.5.5.5.1	ARC L2P filename convention .....	70
7.5.5.6	ARC L2P Global Attributes.....	71
7.5.5.7	ARC L2P Variable Attributes .....	73
7.5.5.8	ARC L2P File Contents .....	73
7.5.6	ARC L3U Sea Surface Temperature Product .....	75
7.5.6.2	Input Data.....	75
7.5.6.3	Auxiliary Data Used .....	75
7.5.6.4	Processing Performed .....	75
7.5.6.5	Product Structure.....	75
7.5.6.5.1	ARC L3U filename convention .....	75
7.5.6.6	ARC L3U Global Attributes .....	75
7.5.6.7	ARC L3U Variable Attributes .....	77
7.5.6.8	ARC L3U File Contents .....	77
7.6	BROWSE PRODUCT.....	79
7.6.1	Three Band Colour Composite Browse Product .....	79
7.6.1.1	Input Data.....	79
7.6.1.2	Auxiliary Data Used .....	79

7.6.1.3	Processing Performed .....	79
7.6.1.4	Product Structure .....	79
7.6.1.5	Main Product Header .....	79
7.6.1.6	Specific Product Header .....	80
7.6.1.7	Data Sets .....	80
7.6.1.7.1	Summary Quality ADS .....	80
7.6.1.7.2	Geolocation Grid ADS .....	81
7.6.1.7.3	Browse MDS .....	81
7.6.1.8	Size Estimate .....	82
7.7	AUXILIARY DATA FILES .....	83
7.7.1	Level 1B Processor Configuration Data File .....	83
7.7.1.1	Format .....	83
7.7.1.1.1	Processor Configuration Data GADS .....	83
7.7.2	AATSR Instrument Data File .....	85
7.7.2.1	Format .....	86
7.7.2.1.1	General Parameters GADS .....	86
7.7.2.1.2	Master Unpacking Definition Table GADS .....	87
7.7.2.1.3	Conversion Parameters GADS .....	87
7.7.2.1.4	Limits GADS .....	87
7.7.2.1.5	Surveillance Limits GADS .....	88
7.7.2.1.6	Validation Parameters GADS .....	88
7.7.2.3	Visible Calibration Data File .....	88
7.7.2.3.1	Format .....	89
7.7.2.3.1.1	Visible Channel Calibration Parameters GADS .....	89
7.7.2.4	General Calibration Data File .....	90
7.7.2.4.1	Format .....	90
7.7.2.4.1.1	General Parameters GADS .....	91
7.7.2.4.1.2	Temperature to Radiance LUT GADS .....	92
7.7.2.4.1.3	Radiance to Brightness Temperature LUT GADS .....	92
7.7.2.4.1.4	1.6 micron Channel Non-linearity Correction LUT GADS .....	92
7.7.2.5	Level 1b Characterisation Data File .....	92
7.7.2.5.1	Format .....	93
7.7.2.5.1.1	Characterisation GADS .....	93
7.7.2.6	Land-Sea Mask Data Product .....	94
7.7.2.7	Digital Terrain Model Data File .....	94
7.7.2.8	Cloud LUT Data File .....	94
7.7.2.8.1	Format .....	94
7.7.2.8.1.1	1.6 Micron Histogram Test LUT GADS .....	95
7.7.2.8.1.2	11 Micron Spatial Coherence Test LUT GADS .....	96
7.7.2.8.1.3	12 Micron Gross Cloud Test LUT GADS .....	96
7.7.2.8.1.4	12Micron Gross Cloud Test Land Surface LUT GADS .....	97
7.7.2.8.1.5	Thin Cirrus Test LUT GADS .....	97
7.7.2.8.1.6	Medium/High Level Cloud Test LUT GADS .....	97
7.7.2.8.1.7	Fog/Low Stratus Test LUT GADS .....	97
7.7.2.8.1.8	11/12 Micron Nadir/Forward Test LUT GADS .....	98
7.7.2.8.1.9	11/3.7 Micron Nadir/Forward Test LUT GADS .....	98
7.7.2.8.1.10	Infrared Histogram Test LUT GADS .....	98
7.7.2.8.1.11	General parameters for Visible Channel Cloud Tests .....	99
7.7.2.8.1.12	Zone vertices for Visible Channel Cloud Test .....	99
7.7.2.8.1.13	Zone definitions for Visible Channel Cloud Test .....	99
7.7.2.8.1.14	Snow-covered surface test LUT .....	99
7.7.2.9	Browse LUT Data File .....	100
7.7.2.9.1	Format .....	100
7.7.2.9.1.1	Browse Day-Time Colour LUT GADS .....	100
7.7.2.10	Level 2 Processor Configuration Data File .....	100
7.7.2.10.1	Format .....	101
7.7.2.10.1.1	Configuration Data GADS .....	101
7.7.2.11	SST Retrieval Coefficient Data File .....	102

7.7.11.1 Format.....	102
7.7.11.1.1 Across-track Band Mapping LUT GADS.....	102
7.7.11.1.2 SST Retrieval Coefficients GADS .....	102
7.7.11.1.3 Averaged SST Retrieval Coefficients GADS.....	103
7.7.12 AATSR LST Retrieval Coefficients Data Product .....	103
7.7.12.1 Format.....	104
7.7.12.1.1 General Parameters for Land Surface Temperature Retrieval.....	104
7.7.12.1.2 Surface Vegetation Class for Land Surface Temperature Retrieval.....	104
7.7.12.1.3 Vegetation Fraction for Land Surface Temperature Retrieval .....	105
7.7.12.1.4 Climatology Data for Land Surface Temperature Retrieval .....	105
7.7.12.1.5 Topographic Variance flagsfor Land Surface Temperature Retrieval .....	105
7.7.12.1.6 Land Surface Temperature Retrieval Coefficients.....	105
7.7.13 ENVISAT-1 Precision Orbit Data Files .....	105
7.7.14 ENVISAT-1 Attitude File .....	105
7.8 AATSR PRODUCT SUMMARY SHEETS .....	107

## INDEX OF TABLES

## AMENDMENT POLICY

This document shall be amended by releasing a new edition of the document in its entirety. The Amendment Record Sheet below records the history and issue status of this document.

### AMENDMENT RECORD SHEET

ISSUE	REVISION	DATE	CHANGE STATUS	ORIGIN
1	A	12/01/96	Issue 1	
1	B	16/02/96	<p>SCR #16, CR #16 Issue 1, Revision B  <u>Reason for Change:</u>            Updated to reflect information in PO-TN-ESA-GS-0381 and to address RIDs of Feb. 2/96 pertaining to the Level 0 structure.            MPH, SPH, DSD, and DSR structures modified.            Table added showing generalized Level 0 product structure.</p> <p><u>RIDs Addressed:</u>            ESA/0001: FEP header defined            ESA/0002: PF-Host time stamp clarified            ESA/0004: Processing PCD added            ESA/0006: AF PCD ADS and DSD added            ESA/0007: page A-3 updated            ESA/0008: page B-3 updated            ESA/0009: Table 8.1.1 modified            ESA/0011: TBD changed to Range/ Doppler            ESA/0013: FEP header defined            ESA/0014: Table 8.4.7.4-2 corrected            CSF/1: filename in MPH corrected            CSF/2: page A-3 updated            CSF/3: MPH PCD information updated            CSF/5: DSD added to Level 0 SPH            CSF/6: Section on AATSR updated and re-issued            CSF/8: AATSR_O Summary Sheet updated</p>	
1	C	04/04/96	<p>SCR #38, CR #38 Issue 1, Revision C  <u>Reason for Change:</u>            Updated Sections 1-6, 17 and Annex A to reflect changes discussed at the Products Review Meeting #1, March 5-8, 1996, as per action item "AI MDA 6 April 96" from PO-MN-ESA-00416, Pg. 35.</p>	Products Review Meeting #1
2	A	20/05/96	<p>SCR #71, CR #71 Issue 2  <u>Reason for Change:</u>            Separate volume created.            Updated new product information from Document A-3.</p>	
2	B	14/04/97	<p>SCR #145, CR #145 Issue 2, Revision B  <u>Reason for Change:</u>            Updated with information from first issue of IODD.            Differences w.r.t R-39, Issue 1, revision 5:  <ul style="list-style-type: none"> <li>• SPH changed to correct ASCII format.</li> <li>• Stripline continuity counters added to SPH.</li> </ul> </p>

## REGISTER OF CHANGES

**Affected pages:**

Section 7.2	(Page 17)	Edited AATSR L2P details and added ARC L2P and ARC L3U to Table 7.2-1 and Figure 7.2-1 (replaced figure)
Section 7.5	(Page 39)	Updated text regarding L2P products in introduction
Section 7.5.2	(Page 46)	AATSR L2P section mostly removed
Section 7.5.5	(Page 69)	Added new section for ARC L2P
Section 7.5.6	(Page 75)	Added new section for ARC L3U
All sections		Typographic and formatting changes applied in all sections

## 7. AATSR PRODUCTS SPECIFICATIONS

### 7.1 INSTRUMENT OVERVIEW

The Advanced Along Track Scanning Radiometer (AATSR) is an advanced version of the ATSR system operated successfully on ERS-1 and ERS-2. The main objective of the AATSR is the precise measurement of Sea Surface Temperature (SST). The AATSR has a similar performance to the ATSR; the inclusion of three visible channels in addition to the four infrared channels allows it to observe land surface parameters such as temperature and vegetation characteristics. AATSR performs a conical scan with only those parts of the cone that fall inside the 500 km wide ground swath being sampled. The rearward part of the scan cone views the ground at approximately nadir, while the forward part looks at about 47 degrees from nadir. As a result, the AATSR produces two superimposed 500 km wide images, one from the nadir view and one from the forward view. These two views may be combined to correct for atmospheric effects. Spatial resolution is approximately 1 km by 1 km at nadir. On-board calibration sources provide internal references for the data to derive Brightness Temperature values from the radiance measurements.

**Table 7.1-1 AATSR Instrument Characteristics**

GEOMETRIC:	Sensor acquires data from two curved scans: <ul style="list-style-type: none"><li>i) forward curved scan</li><li>ii) nadir curved scan</li></ul> Nominal pixel resolution: 1 km x 1 km at sub-satellite point
RADIOMETRIC:	Absolute SST accuracy is better than 0.5 K averaged over areas of 50 km by 50 km, assuming 20% of pixels are cloud free. For 1 km by 1 km cloud free pixels, relative accuracy is better than 0.1 K
SPECTRAL:	7 spectral channels: <ul style="list-style-type: none"><li>i) 0.555 µm (visible) bandwidth: 20 nm</li><li>ii) 0.659 µm (visible) bandwidth: 20 nm</li><li>iii) 0.865 µm (thermal) bandwidth: 20 nm</li><li>iv) 1.61 µm (near-IR) bandwidth: 60 nm</li><li>v) 3.70 µm (infrared) bandwidth: 390 nm</li><li>vi) 10.85 µm (infrared) bandwidth: 900 nm</li><li>vii) 12.00 µm (infrared) bandwidth: 1000 nm</li></ul>

## 7.2 PRODUCTS OVERVIEW

The AATSR products are summarized in Table 7.2-1 and Figure 7.2-1.

**Table 7.2-1 AATSR Products**

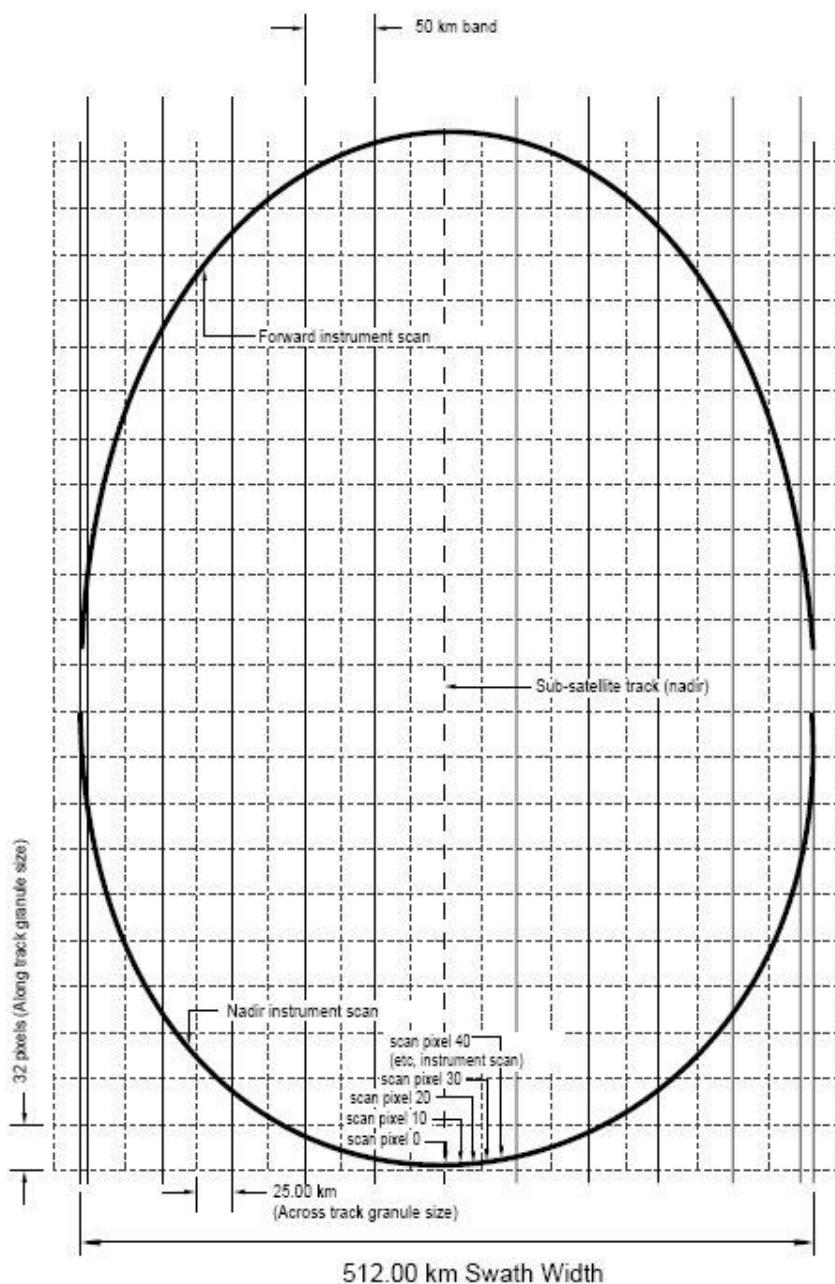

Instrument / mode	Product ID	Description
AATSR	ATS_NL_OP	AATSR Level 0
	ATS_TOA_1P	AATSR Gridded Brightness Temperature and Radiance product. Full Resolution for all channels/both views.
	ATS_NR_2P	AATSR Geophysical Product for Ocean, Land and Atmosphere
	(AATSR L2P)	(AATSR L2P Product generated by the L2P Processor; this product has been replaced by ARC L2P)
	ATS_AR_2P	AATSR Spatially Averaged Sea/Land Geophysical product
	ATS_MET_2P	AATSR Spatially Averaged Sea Surface Temperature for Meteo users.
	ARC L2P	ARC L2P Product generated by the ARC_L2P Processor
	ARC L3U	ARC L3U Product generated by the ARC_L2P Processor
	ATS_AST_BP	AATSR Browse Product (3 colour composite)

**Figure 7.2-1 AATSR Product Tree**

## 7.2.1 Product Grid

The Level 1B and Level 2 MDS records are resampled to a 1 km grid. The philosophy is to migrate each pixel to the nearest grid point, and carry out a cosmetic fill where the density of measured scan pixels is lower than the grid point density. Thus each MDS pixel is a measured scan pixel, but displaced in position. The format of the grid for AATSR products is shown in the figure below. The granule size in azimuth is defined as 32 scan lines. An across track granule size is not needed for AATSR, since child product extraction is limited to full swath extraction, however, a nominal across track granule size of 25 km has been adopted to standardize the positions of annotation data included in the product.

AI-8589-D1R1/KF

**Figure 7.2.1-1 AATSR Product Grid for Level 1B and Level 2 Products (from R-41)**

## 7.3 LEVEL 0 PRODUCTS

AATSR has one Level 0 product.

### 7.3.1 AATSR Level 0 Product

The Level 0 product contains time ordered Annotated Instrument Source Packets. It is archived and is used for all further processing of the data. Until EOM, the NRT version of the product was available 3 hours after data acquisition and the OFL (fully consolidated) version was available within 2 weeks after data acquisition. Detailed description of all Level 0 products is provided in Section 6.1.

#### 7.3.1.1 Input Data

Annotated ISPs as received from the Front End Processor (FEP) plus auxiliary data.

#### 7.3.1.2 Auxiliary Data Used

The Level 0 product requires the following auxiliary information (refer to Volume 6):

- Phase, cycle and orbit number data,
- ID of the systems and subsystem that collect and process the data,
- ENVISAT orbital state vectors,
- Processor Configuration file, which includes PCD error codes and threshold values,
- SBT to UTC conversion data.

#### 7.3.1.3 Processing Performed

Determination of the satellite position and conversion of Satellite Binary Time (SBT) to Universal Time Co-ordinates (UTC) is accomplished using ESA software.

#### 7.3.1.4 Product Structure

As defined in Volume 6. A detailed description of the Instrument Source Packets is provided in Document A-1.

*This page has been left intentionally blank*

## 7.4 LEVEL 1B PRODUCTS

There is one AATSR Level 1B product, the Gridded Brightness Temperature and Reflectance (GBTR) product.

### 7.4.1 Gridded Brightness Temperature and Reflectance

The Level 1B Product consists of TOA radiance measurements and brightness temperatures at full resolution for both the nadir and forward views (7 channels each view, 14 measurements total) of the conical scan. The product has been calibrated for known instrument and atmospheric effects. The Level 1B product is resampled to a fixed grid aligned to the subsatellite track, with both the forward view and the nadir view resampled to the same grid. Surface identification is also performed on a pixel by pixel basis. Pixel types (Land, Sea, Cloud) will be identified using flags. In addition, the localization (Lat. Lon.) and the viewing geometry is provided. The Level 1B product is the base product for all Level 2 processing. The product is produced systematically in strip-line form, from which portions may be extracted using multiples of the 512 km by 512 km minimum scene size. Until EOM, the NRT version was available 3 hours after data acquisition, while an OFL (fully consolidated) version was available within 2 weeks after data acquisition.

#### 7.4.1.1 Input Data

The Level 0 product plus auxiliary data.

#### 7.4.1.2 Auxiliary Data Used

The following auxiliary data files are required for Level 1B processing:

**Table 7.4.1.2-1 Auxiliary Data Files for AATSR Level 1B Processing**

Description	Auxiliary File ID
AATSR Instrument characterization file	ATS_INS_AX
AATSR Level 1B Processing Configuration file	ATS_PC1_AX
Visible Calibration Data file	ATS_VC1_AX
Visible Calibration Drift file: Measured *	ATS_DTM_AX
Visible Calibration Drift file: Extrapolated *	ATS_DTE_AX
General Calibration data file	ATS_GC1_AX
Level 1B Characterization file	ATS_CH1_AX
Land-Sea Mask data file	AUX_LSM_AX
Digital Terrain Model file	AUX_DEM_AX
Cloud LUT Data file	ATS_CL1_AX
Orbit state vectors (one of following)	DOR_NAV_OP AUX_FPO_AX AUX_FRO_AX DOR_POR_AX DOR_VOR_AX

\* Note that these files are not used in the L1B processing per se, but are used in the generation of the visible calibration data files (ATS\_VC1\_AX) and the name of the drift table used is copied from the VC1 file SPH into the L1B headers for traceability. The

extrapolated visible calibration drift files were intended to be used in on-going processing but due to the EOM they never became operational; data from the third reprocessing uses a measured visible calibration drift file.

#### 7.4.1.3 Processing Performed

The major steps involved in Level 1B processing are:

- extraction and validation of source packet data
- calibration of the AATSR visible and infra-red channels
- geolocation of the data
- re-sampling into a rectangular grid of image pixels
- pixel classification
- cloud clearing

#### 7.4.1.4 Product Structure

The high level structure of the Level 1B product is shown below:

**Table 7.4.1.4-1 AATSR Level 1B Product Structure**

<b>MPH</b>
<b>SPH (includes DSDs)</b>

#### 7.4.1.7 Data Sets

The contents of the Data Sets are described in the following sections. Data Sets are in mixed binary format. They may contain ASCII strings, but the ASCII strings are not contained within quotation marks as for the MPH/SPH.

##### 7.4.1.7.1 Summary Quality ADS (SQADS)

This ADS contains product quality information. There is one ADSR per set of 512 scans and the information corresponds to the MDSRs which lie between the time stamp indicated at the start of the ADSR, and the next ADSR time stamp in this ADS. The format of each ADSR is defined in the table below.

**Table 7.4.1.7.1-1 Summary Quality ADSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Attachment flag</b> (set to 1 if all MDSRs corresponding to this ADSR are blank, set to 0 otherwise)	-	1	uc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Image scan number</b>	-	2	us	1
5	<b>Packet Validation during nadir view number of scans null packet</b>	-	2	ss	1

**Table 7.4.1.7.1-1 Summary Quality ADSR**

N	Description	Units	Byte Length	Data Type	Dim.

25	<b>Spare</b>	-	28	uc	28
<b>Size</b>			<b>86</b>		

**7.4.1.7.2 Grid Pixel Latitude and Longitude and Topographic Corrections ADS (LADS)**

This ADS contains grid pixel latitude and longitude. It is composed of several ADSRs, updated at the granule level (32 scans). The format of each ADSR is defined in the table below.

**Table 7.4.1.7.2-1 Grid Pixel Latitude and Longitude and Topographic Corrections ADSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Attachment Flag</b> (set to 1 if all MDSRs corresponding to this ADSR are blank, set to 0 otherwise)	-	1	uc	1
3	<b>Spare</b>	-	3	uc	3

**Table 7.4.1.7.2-1 Grid Pixel Latitude and Longitude and Topographic Corrections ADSR**

N	Description	Units	Byte Length	Data Type	Dim.
4	<b>image scan y coordinate</b>	m	4	sl	1
5	<b>tie point latitudes</b>	10-6 deg	92	sl	23
6	<b>tie point longitudes</b>	10-6 deg	92	sl	23
7	<b>latitude corrections, nadir view</b>	10-6 deg	92	sl	23
8	<b>longitude corrections, nadir view</b>	10-6 deg	92	sl	23
9	<b>latitude corrections, forward view</b>	10-6 deg	92	sl	23
10	<b>longitude corrections, forward view</b>	10-6 deg	92	sl	23
11	<b>Topographic Altitude</b>	metres	46	ss	23
12	<b>Spare</b>	-	8	uc	8
<b>Size</b>			<b>626</b>		

#### 7.4.1.7.3 Scan Pixel x and y ADSR

This ADS contains scan pixel x and y. These are supplied for specialist users who want to know by how much the pixels have been displaced in the regridding. The ADS is composed of several ADSRs updated every 32 scans. The format of each ADSR is defined in the table below.

**Table 7.4.1.7.3-1 Scan Pixel x and y ADSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Scan UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Attachment Flag</b> (always set to zero for this ADS)	-	1	uc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>instrument scan number</b>	-	2	us	1
5	<b>tie pixel x coordinate</b>	m	396	sl	99
6	<b>tie pixel y coordinate</b>	m	396	sl	99
7	<b>Spare</b>	-	20	uc	20
<b>Size</b>			<b>830</b>		

#### 7.4.1.7.4 Nadir View Solar Angles ADS

This ADS contains solar angles. These are not required with great precision, and are therefore calculated only once for each across-track band. (i.e., with an across-track sampling of about 50 km. The ADS contains several ADSRs. The format of each ADSR is defined in the table below.

**Table 7.4.1.7.4-1 Nadir View Solar Angles ADSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Attachment Flag</b> (always set to zero for this ADS)	-	1	uc	1
3	<b>Spare</b>	-	3	uc	3

**Table 7.4.1.7.4-1 Nadir View Solar Angles ADSR**

4	<b>image scan y coordinate</b>	m	4	sl	1
5	<b>tie point solar elevation</b>	mdeg	44	sl	11
6	<b>tie point satellite elevation</b>	mdeg	44	sl	11
7	<b>tie point solar azimuth</b>	mdeg	44	sl	11
8	<b>tie point satellite azimuth</b>	mdeg	44	sl	11
9	<b>Spare</b>	-	20	uc	20
Size			<b>216</b>		

**7.4.1.7.5 Forward View Solar Angles ADS**

Follows identical format to Table 7.4.1.7.4-1, with the data corresponding to the forward scan image.

**7.4.1.7.6 Visible Calibration Coefficients ADS**

This ADS may contain several time-stamped ADSRs if processing is done in stripline. The format of each ADSR is described in the table below:

**Table 7.4.1.7.6-1 Visible Calibration Coefficients ADSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Time of visible calibration</b>	MJD	12	mjd	1
2	<b>Attachment flag</b> (always set to zero for this ADS)	-	1	uc	1
3-32	<b>As described in Table 7.7.3.1.1-1, fields 3 to 32.</b>	-	141	-	-
Size			<b>154</b>		

**7.4.1.7.7 Scan and Pixel Number, Nadir View Image ADS**

This ADS retains the full 1 km grid sampling, and is provided so that the original scan positions can be recovered if anyone should a user wish to do so. The ADS contains several ADSRs, the format of which is described in the table below.

**Table 7.4.1.7.7-1 Scan and Pixel Number, Nadir View Image ADSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Attachment flag</b> (always set to zero for this ADS)	-	1	uc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>image scan y coordinate</b>	m	4	sl	1
5	<b>instrument scan number</b>	-	1024	us	512
6	<b>pixel number</b>	-	1024	us	512
Size			<b>2068</b>		

**7.4.1.7.8 Scan and Pixel Number, Forward View Image ADS**

Follows identical format to Table 7.4.1.7.7-1 with the data corresponding to the forward scan image.

#### 7.4.1.7.9 Brightness Temperature and Reflectance MDSs

The MDSs which contain the Brightness Temperature and Reflectance data included in the product follow the order listed in the table below. Both forward and nadir views are included in the product.

**Table 7.4.1.7.9-1 AATSR Level-1B MDS List**

MDS
12 micron nadir view BT MDS
11 micron nadir view BT MDS
3.7 micron nadir view BT MDS
1.6 micron nadir view reflectance MDS
0.87 micron nadir view reflectance MDS
0.67 micron nadir view reflectance MDS
0.55 micron nadir view reflectance MDS
12 micron forward view BT MDS
11 micron forward view BT MDS
3.7 micron forward view BT MDS
1.6 micron forward view reflectance MDS
0.87 micron forward view reflectance MDS
0.67 micron forward view reflectance MDS
0.55 micron forward view reflectance MDS

Each MDS is composed of several MDSRs. The format of the MDSRs is the same for all MDSs listed in Table 7.4.1.7.9-1.; the format of each MDSR is defined in the table below

**Table 7.4.1.7.9-2 MDSR for Brightness Temperature and Reflectance MDSs**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> set to -1 if MDSR is invalid (all values are exceptional), set to 0 otherwise	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Image scan y coordinate</b>	m	4	sl	1
5	<b>BT or reflectance for pixel 0 - 511</b> (Units are K/100 for BT, %/100 for reflectance [small negative values may be used to represent channel-specific exceptional values])	K/100 %/100	1024	ss	512
<b>Size</b>			<b>1044</b>		

#### 7.4.1.7.10 Confidence Words, Nadir View MDS

This MDS contains product quality information at the pixel level. The MDS contains several MDSRs. The format of each MDSR is defined in the table below.

<b>Table 7.4.1.7.10-1 Confidence Words, Nadir View MDSR</b>					
<b>N</b>	<b>Description</b>	<b>Units</b>	<b>Byte Length</b>	<b>Data Type</b>	<b>Dim.</b>
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (set to -1 if all values in record are invalid, set to zero otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Image scan y coordinate</b>	m	4	sl	1
5	<b>Confidence words (Table 7.4.1.7.10-2)</b>	flags	1024	us	512
<b>Size</b>			<b>1044</b>		

**Table 7.4.1.7.10-2 GBTR Confidence Flags (nadir or forward view)**

<b>Bit</b>	<b>Meaning if set to 1</b>
0	Blanking Pulse
1	Cosmetic Fill Pixel
2	Entire scan absent from telemetry
3	Pixel absent from telemetry
4	Pixel not decompressed owing to error in packet validation
5	No signal in some channel (zero count)
6	Saturation in some channel (maximum count)
7	Derived radiance of some channel outside range of calibration
8	Calibration Parameters unavailable for pixel
9	Pixel unfilled (cosmetic fill algorithm unable to find nearest neighbour pixel)
10 - 15	Unused

Note: Bits are numbered as per Volume A

#### 7.4.1.7.11 Confidence Words, Forward View MDS

The format of each MDSR in this MDS is identical to that described in Table 7.4.1.7.10-1.

#### 7.4.1.7.12 Cloud Flags, Nadir View MDS

This MDS contains cloud information at the pixel level. The MDS contains several MDSRs. The format of each MDSR is defined in the table below.

<b>Table 7.4.1.7.12-1 Cloud Flags, Nadir View MDSR</b>					
<b>N</b>	<b>Description</b>	<b>Units</b>	<b>Byte Length</b>	<b>Data Type</b>	<b>Dim.</b>
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (set to -1 if all values in record are invalid, set to zero otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>image scan y coordinate</b>	m	4	sl	1

**Table 7.4.1.7.12-1 Cloud Flags, Nadir View MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
5	<b>cloud/land flags (Table 7.4.1.7.12-2)</b>	flags	1024	us	512
Size			<b>1044</b>		

**Table 7.4.1.7.12-2 GBTR Cloud-clearing/Land Flagging Flags (nadir or forward view)**

Bit	Meaning if set to 1
0	Pixel is over land
1	Pixel is cloudy (result of all cloud tests)
2	Sunglint detected in pixel
3	1.6 micron reflectance histogram test shows pixel cloudy (day-time only)
4	1.6 micron spatial coherence test shows pixel cloudy (day-time only)
5	11 micron spatial coherence test shows pixel cloudy
6	12 micron gross cloud test shows pixel cloudy
7	11/12 micron thin cirrus test shows pixel cloudy
8	3.7/12 micron medium/high level test shows pixel cloudy (night-time only)
9	11/3.7 micron fog/low stratus test shows pixel cloudy (night-time only)
10	11/12 micron view-difference test shows pixel cloudy
11	3.7/11 micron view-difference test shows pixel cloudy (night-time only)
12	11/12 micron thermal histogram test shows pixel cloudy
13	Visible channel cloud test shows pixel cloudy
14	NDSI snow flag
15	Unused

Note: Bits are numbered as per Volume A

#### 7.4.1.7.13 Cloud Flags, Forward View MDS

This MDS contains MDSRs which follow the identical format as described in Table 7.4.1.7.12-1.

#### 7.4.1.8 Size Estimate

The following table provides a size estimate for the Level 1B product. The estimated size is based on a nominal product size of one orbit. For equal time interval sampling, one orbit contains 1258 granules and 40256 image scans. Instrument-scan based ADSs are assumed to contain 1288 granules. Note that 1 MByte =  $1 \times 10^6$  bytes.

**Table 7.4.1.8-1 GBTR Product Size**

Description	Record size (byte)	Data Set Size (Mbyte/product)
MPH	1247	0.001247
SPH	12830	0.012830
Summary Quality ADS (every 512 scans)	86	0.0066
Grid pixel latitude and longitude, topographic corrections ADS	626	0.79
Scan pixel x and y ADS	830	0.810
Nadir view solar angles ADS	216	0.27
Forward view solar angles ADS	216	0.27
Visible Calibration Coefficients ADS	154	0.000154
Scan and pixel number, nadir view image ADS	2068	2.66

**Table 7.4.1.8-1 GBTR Product Size**

<b>Description</b>	<b>Record size (byte)</b>	<b>Data Set Size (Mbyte/product)</b>
Scan and pixel number, forward view image ADS	2068	2.66
12 micron nadir view MDS	1044	40.08

## 7.5 LEVEL 2 PRODUCTS

Three Level 2 products are created, a full resolution product, an averaged product, and an averaged product for Meteo users. There are two additional Level 2 products, the ARC L2P and ARC L3U products in netCDF, generated by the ARC\_L2P Processor, which have become available since September 2013. (These replace the previous AATSR L2P product, which was a repackaging of the L2 full resolution gridded SST data into netCDF format with ancillary information.)

### 7.5.1 Gridded Sea Surface Temperature Product

The AATSR Level 2 Gridded Sea Surface Temperature (GSST) product is a full spatial resolution (approximately 1 km by 1 km) product. The dataset is switchable, meaning that the contents of the pixel fields depend on surface type and are a mixture of geophysical product, surface brightness temperature/radiance and TOA brightness temperature/radiance in the case of an unclassified pixel. This product is used for land and ocean studies requiring high resolution localized temperature/radiance data. It is distributed using 512 by 512 km minimum scenes. Until EOM, the NRT version was available 3 hours after data acquisition, while the OFL (fully consolidated) version was available within 2 weeks after data acquisition.

#### 7.5.1.1 Input Data

Level 1B product plus auxiliary data.

#### 7.5.1.2 Auxiliary Data Used

Auxiliary data used to produce the Level 2 GSST product includes:

Table 7.5.1.2-1 Auxiliary Data Files for AATSR Level 2 Processing	
Description	Auxiliary File ID
AATSR Level 2 Processing Configuration file	ATS_PC2_AX
Retrieval Coefficient Data file	ATS_SST_AX
LST Coefficient Data file	ATS_LST_AX

#### 7.5.1.3 Processing Performed

Level 2 GSST processing includes:

- Derivation of Sea Surface Temperature (SST) and other parameters (e.g. NDVI) from the gridded brightness temperatures of the Level 1B product;

#### 7.5.1.4 Product Structure

The high level structure of the Level 2 GSST product is shown below.

Table 7.5.1.4-1 AATSR Level 2 GSST Product Structure

MPH
SPH (includes DSDs)
Summary Quality ADS (SQADS)
Grid pixel latitude and longitude, topographic corrections ADS (LADS)

Scan pixel x and y ADS
Nadir view solar angles ADS
Forward view solar angles ADS
Scan and pixel number, nadir view image ADS
Scan and pixel number, forward view image ADS
Distributed product MDS

### 7.5.1.5 Main Product Header

The Main Product Header is defined in Volume 5.

### 7.5.1.6 Specific Product Header

The content of the Specific Product Header shall be as follows. The SPH is an ASCII header. Refer to Volume 5 for an explanation of ASCII header conventions. The SPH is similar to the SPH of the Level 1B product. Only the DSD list is changed. The format of the SPH is defined in the table below.

Table 7.5.1.6-1 AATSR Level 2 - SPH

N	Description	Units	Byte Length	Data Type	Dim.
1-35	<b>First 35 fields of the Level 1B SPH described in Table 7.4.1.6-1</b>	-	2190	-	-
	<i>DSDs for included data sets</i>				
36	<b>DSD (A) - Summary Quality ADS (SQADS)</b>	-	280	dsd	1
37	<b>DSD (A) - Grid pixel latitude and longitude, topographic corrections ADS (LADS)</b>	-	280	dsd	1
38	<b>DSD (A) - Scan pixel x and y ADS</b>	-	280	dsd	1

### 7.5.1.7 Data Sets

The contents of the Data Sets are described in the following sections. Data Sets are in mixed binary format. They may contain ASCII strings, but the ASCII strings are not contained within quotation marks as for the MPH/SPH.

#### 7.5.1.7.1 Summary Quality ADS (SQADS)

The Summary Quality ADS consists of several ADSRs. There is one ADSR per set of 512 scans, and the information contained applies until the next ADSR. The format of the ADSR is described in the table below.

Table 7.5.1.7.1-1 Summary Quality ADS Format					
N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	mjd	12	mjd	1
2	<b>Attachment Flag</b>	-	1	uc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Image scan number</b>	-	2	us	1
5	<b>Packet Validation during nadir view number of scans null packet</b>	-	2	ss	1
6	<b>Packet Validation during nadir view number of scans failing basic validation</b>	-	2	ss	1
7	<b>Packet Validation during nadir view number of scans failing CRC check</b>	-	2	ss	1
8	<b>Packet Validation during nadir view number of scans showing buffers full</b>	-	2	ss	1

**Table 7.5.1.7.1-1 Summary Quality ADS Format**

<b>N</b>	<b>Description</b>	<b>Units</b>	<b>Byte Length</b>	<b>Data Type</b>	<b>Dim.</b>
9	<b>Packet Validation during nadir view number of scans showing scan jitter</b>	-	2	ss	1
10	<b>Percentage of cloudy pixels</b>	0.01%	2	ss	1
11	<b>Percentage of NDVI invalid</b>	0.01%	2	ss	1
12	<b>Percentage of SST (nadir view) invalid</b>	0.01%	2	ss	1
13	<b>Percentage of SST (dual view) invalid</b>	0.01%	2	ss	1
14	<b>Packet Validation during nadir view number of scans - all other errors</b>	-	2	ss	1
15	<b>Packet Validation during forward view number of scans null packet</b>	-	2	ss	1
16	<b>Packet Validation during forward view number of scans failing basic validation</b>	-	2	ss	1

25	<b>Spare</b>	-	28	uc	28
	<b>Size (in bytes)</b>		<b>86</b>		

### **7.5.1.7.2 Grid Pixel Latitude and Longitude and Topographic Correction ADS (LADS)**

This data set is identical to that of the Level 1B product, and the ADSR is described in Table 7.4.1.7.2-1.

### **7.5.1.7.3 Scan Pixel x and y ADS**

This data set is identical to that of the Level 1B product, and the ADSR is described in Table 7.4.1.7.3-1.

### **7.5.1.7.4 Nadir View Solar Angles ADS**

This data set is identical to that of the Level 1B product, and the ADSR is described in Table 7.4.1.7.4-1.

### **7.5.1.7.5 Forward View Solar Angles ADS**

This data set is identical to that of the Level 1B product, and the ADSR is described in Table 7.4.1.7.4-1.

#### 7.5.1.7.6 Scan and Pixel Number, Nadir View Image ADS

This data set is identical to that of the Level 1B product, and the ADSR is described in Table 7.4.1.7.7-1.

#### 7.5.1.7.7 Scan and Pixel Number, Forward View Image ADS

This data set is identical to that of the Level 1B product, and the ADSR is described in Table 7.4.1.7.7-1.

#### 7.5.1.7.8 Distributed Product MDS

The MDS contains the calculated geophysical parameters. The MDS is composed of one MDSR per scan. The format of each MDSR is common, and is defined in the table below. The contents of each MDSR varies depending on the type of pixels located in the scan.

<b>Table 7.5.1.7.8-1 Distributed Product Record MDS</b>					
<b>N</b>	<b>Description</b>	<b>Units</b>	<b>Byte Length</b>	<b>Data Type</b>	<b>Dim.</b>
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (-1 if all measurement values are invalid, 0 otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>image scan y coordinate</b>	m	4	sl	1
5	<b>confidence words</b> (Defined in Table 7.5.1.7.8-3)	flags	1024	us	512
6	<b>nadir field</b> (Note 1, 2)	K/100	1024	ss	512
7	<b>combined field</b> (Note 1, 3)		1024	ss	512
<b>Size</b>			<b>3092</b>		

**Note 1:** The contents of these MDS fields depend on the setting of the forward and nadir cloud flags and the land flag according to the following table. The units and range of these quantities consequently depend on the flag settings; values quoted are for cloud-free sea data.

**Note 2:** The range values quoted refer to valid data. If a valid nadir sea surface temperature cannot be derived, the nadir field may contain an exception value. If so, this will refer to the 11 micron channel.

**Note 3:** The NDVI is a dimensionless quantity and is given in the product in units of 0.0001. Thus if the combined field represents a land pixel, its value will be in the range -10000 to +10000. An exception value of -19999 will be used if a valid NDVI cannot be derived.

**Table 7.5.1.7.8-2 GSST Nadir and Combined Field Contents**

<b>Nadir cloud</b>	<b>Forward cloud</b>	<b>Land</b>	<b>Nadir field</b>	<b>Combined field</b>
0	0	0	SST nadir	SST combined
0	1	0	SST nadir	SST combined (see Note 1)
1	0/1	0	Cloud top temp (see Note 2)	Cloud top height (see Note 3)
0/1	0/1	1	Land surface temp	NDVI

**Note 1:** A dual view SST is calculated in this case as if the forward view were cloud-free, but the value is excluded from the smoothing, and the corresponding confidence flag ('dual view SST valid') is not set.

**Note 2:** Placeholder, field currently filled with 11 micron Brightness Temperature nadir data.

**Note 3:** Placeholder, field currently empty.

The content of the confidence flags are defined in the table below.

**Table 7.5.1.7.8-3 GSST Confidence Flags Note: Bits are numbered as per Volume A convention**

Bit	Meaning if set
0	Nadir-only SST is valid
1	Nadir-only SST retrieval includes 3.7 micron channel
2	Dual-view SST is valid
3	Dual-view SST retrieval includes 3.7 micron channel
4	Pixel is over land
5	Nadir-view pixel is cloudy
6	Nadir-view pixel has blanking pulse
7	Nadir-view pixel is cosmetic fill
8	Forward-view pixel is cloudy
9	Forward-view pixel has blanking pulse
10	Forward-view pixel is cosmetic fill
11	One or both views flagged cloudy by 1.6 micron test (daytime only)
12	Cloud flagged by 11 micron/12 micron nadir -forward test
13	One or both views flagged cloudy by infra-red histogram test
14 - 15	Topographic variance flags for LST retrieval

### 7.5.1.8 Size Estimate

The following size estimate assumes 40256 scans per product (i.e., one orbit), and a granule size of 32 scans. Hence, the product contains 1258 granules. Note that  $1 \text{ MByte} = 1 \times 10^6 \text{ bytes}$ .

**Table 7.5.1.8-1 GSST Product Size**

Description	Record size (byte)	Data Set Size (Mbyte/orbit)
MPH	1247	0.001247
SPH	5830	0.005830
Summary Quality ADS (every 512 scans)	86	0.007
Grid pixel latitude and longitude, topographic corrections ADS	626	0.79
Scan pixel x and y ADS	830	1.0
Nadir view solar angles ADS	216	0.27
Forward view solar angles ADS	216	0.27
Scan and pixel number, nadir view image ADS	2068	2.66
Scan and pixel number, forward view image ADS	2068	2.66

**Table 7.5.1.8-1 GSST Product Size**

Description	Record size (byte)	Data Set Size (Mbyte/orbit)
Distributed product record MDS	3092	124.5
<b>Total size of product (Mbyte)</b>		<b>133</b>

### 7.5.2 AATSR L2P (UPA-L2P-ATS\_NR\_\_2P) Product

The AATSR L2P Product (UPA-L2P-ATS\_NR\_\_2P) has been replaced by the ARC L2P product (see section 7.5.5) for the third full reprocessing of AATSR data. Full details of the AATSR L2P product can be viewed in version 4/B of this document.

### 7.5.3 AATSR Averaged Surface Temperature (AST) Product

#### 7.5.3.1 Description

This AATSR Level 2 product is a spatially averaged version of the Geophysical Product. Measurements contained in this product are thus averages of values calculated for the Geophysical Product. Several types of averages are produced: 50 km by 50 km cells, 17 by 17 km cells, 10 arcminute cells, and 30 arcminute cells. These products cover a full orbit and are used for global monitoring. Until EOM, the NRT version of the product was available 3 hours after data acquisition, while the OFL (fully consolidated) product was available within 2 weeks after data acquisition.

#### 7.5.3.2 Input Data

AATSR Level 1B full resolution GBTR product.

#### 7.5.3.3 Auxiliary Data Used

See section 7.5.1.2. No additional files are required.

#### 7.5.3.4 Processing Performed

The algorithm must average the values from the full resolution Geophysical Product.

#### 7.5.3.5 Product Structure

The high level structure of the Level 2 AST product is shown below:

**Table 7.5.3.5-1 AATSR Level 2 AST Product Structure**

MPH
<b>SPH (includes DSDs)</b>
SST Record, 50 kilometre cell MDS
SST Record, 17 kilometre cell MDS

BT/TOA Sea Record, 30 arc minute cell MDS

### 7.5.3.6 Main Product Header

The Main Product Header is defined in Volume 5.

### 7.5.3.7 Specific Product Header

The content of the Specific Product Header shall be as follows. The SPH is an ASCII header. Refer to Volume 5 for an explanation of ASCII header conventions.

The format of the SPH is defined in the table below.

**Table 7.5.3.7-1 AATSR Level 2 AST – SPH**

N	Description	Units	Byte Length	Data Type	Dim.
1-31	First 31 fields of the Level 1B SPH described in Table 7.4.1.6-1	-	1264	-	-

### 7.5.3.8 Data Sets

The contents of the Data Sets are described in the following sections. Data Sets are in mixed binary format. They may contain ASCII strings, but the ASCII strings are not contained within quotation marks as for the MPH/SPH

#### 7.5.3.8.1 SST Record, 50km cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in the table below.

**Table 7.5.3.8.1-1 SST Record, 50km cell MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (-1 if all measurement values are invalid, 0 otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Latitude of 50x50km cell</b>	10-6 deg	4	sl	1
5	<b>Longitude of 50x50km cell</b>	10-6 deg	4	sl	1
6	<b>Mean across-track pixel number</b>	-	2	ss	1
7	<b>mean nadir-only SST in 50x50km cell</b>	K/100	2	ss	1
8	<b>standard deviation of nadir-only SST</b>	K/100	2	ss	1
9	<b>Number of pixels in nadir-only average, 50x50km cell</b>	-	2	us	1
10	<b>mean dual-view SST, 50x50km cell</b>	K/100	2	ss	1
11	<b>standard deviation of dual-view SST</b>	K/100	2	ss	1

15	<b>Percentage cloud-cover, nadir view</b>	%/100	2	ss	1
16	<b>Cloud-top temperature, forward view</b>	K/100	2	ss	1
17	<b>Percentage cloud-cover, forward view</b>	%/100	2	ss	1
<b>Size</b>			<b>50</b>		

#### 7.5.3.8.2 SST Record, 17km cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in the table below.

**Table 7.5.3.8.2-1 SST Record, 17km cell MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (-1 if all measurement values are invalid, 0 otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Latitude of 17x17km cell</b>	10-6	4	sl	1

**Table 7.5.3.8.2-1 SST Record, 17km cell MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
		deg			
5	<b>Longitude of 17x17km cell</b>	10-6deg	4	sl	1
6	<b>Mean across-track pixel number</b>	-	2	ss	1
7	<b>mean nadir-only SST in 17x17km cells</b>	K/100	2	ss	1
8	<b>Number of pixels in nadir-only average, 17x17km cells</b>	-	2	us	1
9	<b>mean dual-view SST in 17x17km cells</b>	K/100	2	ss	1
10	<b>Number of pixels in dual-view average, 17x17km cell</b>	-	2	us	1
11	<b>AST confidence word</b>	flags	4	us	2
Size			<b>38</b>		

### 7.5.3.8.3 SST Record 10 arc minute cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in the table below.

**Table 7.5.3.8.3-1 SST Record, 10 arc minute cell MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (-1 if all measurement values are invalid, 0 otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Latitude of 10 arcmin cell</b>	10-6 deg	4	sl	1
5	<b>Longitude of 10 arcmin cell</b>	10-6deg	4	sl	1
6	<b>Mean across-track pixel number</b>	-	2	ss	1
7	<b>mean nadir-only SST in 10 arcmin cell</b>	K/100	2	ss	1
8	<b>Number of pixels in nadir-only average, 10 arcmin cell</b>	-	2	us	1
9	<b>mean dual-view SST in 10 arcmin cell</b>	K/100	2	ss	1
10	<b>Number of pixels in dual-view average, 10 arcmin cell</b>	-	2	us	1
11	<b>AST confidence word</b>	flags	4	us	2
Size			<b>38</b>		

### 7.5.3.8.4 SST Record 30 arc minute cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in Table 7.5.3.8.1-1 above, with references to "50x50km cell" replaced by "30 arc minute cell".

### 7.5.3.8.5 LST Record 50km cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in the table below.

**Table 7.5.3.8.5-1 LST Record 50km cell MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (-1 if all measurement values are invalid, 0 otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Latitude of 50x50km cell</b>	10-6 deg	4	sl	1
5	<b>Longitude of 50x50km cell</b>	10-6 deg	4	sl	1
6	<b>Mean across-track pixel number</b>	-	2	ss	1
7	<b>mean land surface temperature (ST)</b>	K/100	2	ss	1
8	<b>standard deviation of land ST</b>	K/100	2	ss	1
9	<b>Number of pixels in land surface temperature average, 50x50km cell</b>	-	2	us	1
10	<b>mean NDVI</b>	0.0001	2	ss	1
11	<b>standard deviation of NDVI</b>	0.0001	2	ss	1
12	<b>Number of pixels in NDVI average, 50x50km cell</b>	-	2	us	1
13	<b>AST confidence word</b>	flags	4	us	2
14	<b>Cloud-top temperature, nadir view</b>	K/100	2	ss	1
15	<b>Percentage cloud-cover, nadir view</b>	%/100	2	ss	1
16	<b>Cloud-top temperature, forward view</b>	K/100	2	ss	1
17	<b>Percentage cloud-cover, forward view</b>	%/100	2	ss	1
<b>Size</b>			<b>50</b>		

### 7.5.3.8.6 LST Record 17km cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in the table below.

**Table 7.5.3.8.6-1 LST Record 17km cell MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (-1 if all measurement values are invalid, 0 otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Latitude of 17x17km cell</b>	10-6 deg	4	sl	1
5	<b>Longitude of 17x17km cell</b>	10-6 deg	4	sl	1
6	<b>Mean across-track pixel number</b>	-	2	ss	1
7	<b>mean land ST in 17x17km cells</b>	K/100	2	ss	1
8	<b>Number of pixels in land surface temperature average, 17x17km cells</b>	-	2	us	1
9	<b>mean NDVI in 17x17km cells</b>	0.0001	2	ss	1

**Table 7.5.3.8.6-1 LST Record 17km cell MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
10	<b>Number of pixels in NDVI average, 17x17 km cells</b>	-	2	us	1
11	<b>AST confidence word</b>	flags	4	us	2
	<b>Size</b>		<b>38</b>		

Note: The NDVI is a dimensionless quantity and is expressed here in units of 0.0001. An exception value of -19999 will be used if a valid NDVI cannot be derived.

#### 7.5.3.8.7 LST Record 10 arc minute cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in Table 7.5.3.8.6-1 above, with references to "17x17km cell" replaced with "10 arc minute cell".

#### 7.5.3.8.8 LST Record 30 arc minute cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in Table 7.5.3.8.5-11 above, with references to "50x50km cell" replaced by "30 arc minute cell".

#### 7.5.3.8.9 BT/TOA Land Record, 50km cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in the table below.

**Table 7.5.3.8.9-1 BT/TOA Land Record, 50km cell MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (-1 if all measurement values are invalid, 0 otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3

42	<b>Pixel threshold failure flags for averages, forward view</b>	-	2	us	1
	<b>Size</b>		<b>120</b>		

**7.5.3.8.15 BT/TOA Sea Record, 10 arc minute cell MDS**

The MDS is composed of several MDSRs. The format of each MDSR is defined in Table 7.5.3.8.14-1 above, with references to “17x17km cell” replaced with “10 arc minute cell”.

#### 7.5.3.8.16 BT/TOA Sea Record, 30 arc minute cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in Table 7.5.3.8.13-1 above, with references to “50x50km cell” replaced by “30 arc minute cell”.

#### 7.5.3.8.17 Pixel Threshold Failure Flags

<b>Table 7.5.3.8.17-1 Pixel Threshold Failure Flags (Nadir or Forward View)</b>	
<b>Bit</b>	<b>Meaning if set to 1</b>
0	Number of clear pixels contributing to average is less than threshold, 12 micron channel
1	Number of clear pixels contributing to average is less than threshold, 11 micron channel
2	Number of clear pixels contributing to average is less than threshold, 3.7 micron channel
3	Number of clear pixels contributing to average is less than threshold, 1.6 micron channel
4	Number of clear pixels contributing to average is less than threshold, 0.870 micron channel
5	Number of clear pixels contributing to average is less than threshold, 0.670 micron channel
6	Number of clear pixels contributing to average is less than threshold, 0.555 micron channel
7	Number of cloudy pixels contributing to average is less than threshold, 12 micron channel
8	Number of cloudy pixels contributing to average is less than threshold, 11 micron channel
9	Number of cloudy pixels contributing to average is less than threshold, 3.7 micron channel
10	Number of cloudy pixels contributing to average is less than threshold, 1.6 micron channel
11	Number of cloudy pixels contributing to average is less than threshold, 0.870 micron channel
12	Number of cloudy pixels contributing to average is less than threshold, 0.670 micron channel
13	Number of cloudy pixels contributing to average is less than threshold, 0.555 micron channel
14	View contains day-time data
15	Unused

Note: Bits are numbered as per the convention defined in Volume A.

<b>Table 7.5.3.8.17-2 AST Confidence Word</b>	
<b>Bit</b>	<b>Meaning if set to 1</b>
0-15	Unused
16	Sea MDS: Nadir-only SST retrieval used 3.7 micron channel Land MDS: Reserved
17	Sea MDS: Dual-view SST retrieval used 3.7 micron channel Land MDS: Reserved
18	Nadir view contains day-time data
19	Forward view contains day-time data
20-21	Topographic variance flag for LST calculation
22-31	Unused

Where bit 0 is the least significant bit of the 4 byte structure.

### 7.5.3.9 Size Estimate

The size estimate below is based on the assumptions shown in Table 7.5.3.9-1.

<b>Table 7.5.3.9-1 Number of Cells per AST Product</b>			
<b>Cells Size</b>	<b>Number of Cells across track (512km)</b>	<b>Number of Cells along track (40000km)</b>	<b>Total Number of Cells (40000km)</b>
50 km	11	800	8800
17 km	32	2400	76800
30 mins. (55.56 km)	10	720	7200
10 mins. (18.52 km)	28	2160	60480

Note that the final size estimates for the 10 arc-minute and 30 arc-minute data sets tabulated below are increased by a factor of 40% from their nominal size to allow for the reduction in cell size at high latitudes. The estimates here do not allow for the reduction that would apply if empty records (e.g., Sea MDSRs corresponding to cells that are entirely over land, and vice versa) were eliminated from the product.

<b>Table 7.5.3.9-2 AST Product Size</b>		
<b>Description</b>	<b>Record size (byte)</b>	<b>Data Set Size (Mbyte/ orbit)</b>
MPH	1247	0.001
SPH	7195	0.007
SST Record, 50 kilometre cell MDS	50	0.420
SST Record, 17 kilometre cell MDS	38	2.783
SST Record, 10 arc minute cell MDS	38	3.068
SST Record, 30 arc minute cell MDS	50	0.481
LST Record, 50 kilometre cell MDS	50	0.420
LST Record, 17 kilometre cell MDS	38	2.783
LST Record, 10 arc minute cell MDS	38	3.068
LST Record, 30 arc minute cell MDS	50	0.481
BT/TOA Land Record, 50 kilometre cell MDS	250	2.098
BT/TOA Land Record, 17 kilometre cell MDS	138	10.107
BT/TOA Land Record, 10 arc minute cell MDS	138	11.143
BT/TOA Land Record, 30 arc minute cell MDS	250	2.403
BT/TOA Sea Record, 50 kilometre cell MDS	234	1.964
BT/TOA Sea Record, 17 kilometre cell MDS	122	8.936
BT/TOA Sea Record, 10 arc minute cell MDS	122	9.851
BT/TOA Sea Record, 30 arc minute cell MDS	234	2.249
<b>Total size of product (MByte)</b>		<b>62.263</b>

## 7.5.4 AATSR Spatially Averaged Surface Temperature (AST) Product for Meteo Users

### 7.5.4.1 Description

This AATSR product is extracted from the AST product described in the previous section. It is intended for use by Meteo users.

### 7.5.4.2 Input Data

AATSR Level 2 AST product.

### 7.5.4.3 Auxiliary Data Used

See section 7.5.1.2. No additional files are required.

### 7.5.4.4 Processing Performed

The product is extracted from the ATS\_AR\_\_2P product.

### 7.5.4.5 Product Structure

The high level structure of the Level 2 AST product is shown below.

**Table 7.5.4.5-1 AATSR ATS\_MET\_2P Product Structure**

<b>MPH</b>
SPH (includes DSDs)
SST Record, 10 arc minute cell MDS

### 7.5.4.6 Main Product Header

The Main Product Header is defined in Volume 5.

### 7.5.4.7 Specific Product Header

The content of the Specific Product Header shall be as follows. The SPH is an ASCII header. Refer to Volume 5 for an explanation of ASCII header conventions.

The format of the SPH is defined in the table below.

**Table 7.5.4.7-1 AATSR ATS\_MET\_2P - SPH**

N	Description	Units	Byte Length	Data Type	Dim.
1-31	First 31 fields of the Level 1B SPH described in Table 7.4.1.6-1	-	1264	-	-
32	Spare	-	50	uc	50
	newline character	terminator	1	uc	1
	DSDs for included data sets				
33	DSD (M) - SST Record, 10 arc minute cell MDS	-	280	dsd	1
34	DSD Spare (279 blank space characters followed	-	280	dsd_sp	1

Table 7.5.4.7-1 AATSR ATS\_MET\_2P - SPH

N	Description	Units	Byte Length	Data Type	Dim.
	<b>by 1 newline character)</b>				
	<i>DSDs for referenced files</i>				
35	<b>DSD (R) - Level 1B data file from which this product was produced</b>	-	280	dsd	1
36	<b>DSD (R) - AATSR Level 2 Processing Configuration file</b>	-	280	dsd	1
37	<b>DSD (R) - Retrieval Coeff. Data file</b>	-	280	dsd	1
38	<b>DSD (R) - LST Coeff. Data file</b>	-	280	dsd	1
	<b>size (in bytes)</b>		<b>2995</b>		

In each DSD of the SPH, the field DS\_NAME is filled as described in the table below.

Table 7.5.4.7-2 AATSR Level-2 Meteo DS\_NAME

DSD	DS_NAME
<b>DSD (M) - SST Record, 10 arc minute cell MDS</b>	SEA_ST_10_MIN_CELL_MDS
<i>DSDs for referenced files</i>	
<b>DSD (R) - Level 1B data file from which this product was created</b>	LEVEL_1B_PRODUCT
<b>DSD (R) - AATSR Level 2 Processing Configuration file</b>	PROCESSING_PARAMS_L2_FILE
<b>DSD (R) - Retrieval Coeff. Data file</b>	RETRIEVAL_COEFS_DATA_FILE
<b>DSD (R) - LST Coeff. Data file</b>	LST_COEFS_DATA_FILE

## 7.5.4.8 Data Sets

The contents of the Data Sets are described in the following sections. Data Sets are in mixed binary format. They may contain ASCII strings, but the ASCII strings are not contained within quotation marks as for the MPH/SPH.

### 7.5.4.8.1 SST Record 10 arc minute cell MDS

The MDS is composed of several MDSRs. The format of each MDSR is defined in the table below.

Table 7.5.4.8.1-1 SST Record, 10 arc minute cell MDSR

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> (-1 if all measurement values are invalid, 0 otherwise)	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>Latitude of 10 arcmin cell</b>	10-6 deg	4	sl	1
5	<b>Longitude of 10 arcmin cell</b>	10-6deg	4	sl	1
6	<b>Spatially averaged 12 micron BT of all clear pixels in 10 arcmin cell</b>	K/1000	4	sl	1

**Table 7.5.4.8.1-1 SST Record, 10 arc minute cell MDSR**

N	Description	Units	Byte Length	Data Type	Dim.
7	Spatially averaged 11 micron BT of all clear pixels in 10 arcmin cell	K/1000	4	sl	1
8	Spatially averaged 3.7 micron BT of all clear pixels in 10 arcmin cell	K/1000	4	sl	1
9	Spatially averaged 12 micron BT of all clear pixels in 10 arcmin cell	K/1000	4	sl	1
10	Spatially averaged 11 micron BT of all clear pixels in 10 arcmin cell	K/1000	4	sl	1
11	Spatially averaged 3.7 micron BT of all clear pixels in 10 arcmin cell	K/1000	4	sl	1
12	Mean across-track pixel number	-	2	ss	1
13	mean nadir-only SST in 10 arcmin cell	K/100	2	ss	1
14	Number of pixels in nadir-only average, 10 arcmin cell	-	2	us	1
15	mean dual-view SST in 10 arcmin cell	K/100	2	ss	1
16	Number of pixels in dual-view average, 10 arcmin cell	-	2	us	1
17	AST confidence word	flags	4	us	2
Size			<b>62</b>		

#### 7.5.4.9 Size Estimate

The size estimate below is based on the assumptions shown in Table 7.5.3.9-1.

**Table 7.5.4.9-1 ATS\_MET\_2P Product Size**

Description	Record size (byte)	Data Set Size (Mbyte/ orbit)
MPH	1247	0.001
SPH	2995	0.003
SST Record, 10 arc minute cell MDS	62	5.006
<b>Total size of product (Mbyte)</b>		<b>5.010</b>

## 7.5.5 ARC L2P Gridded Sea Surface Temperature Product

### 7.5.5.1 Description

The ARC L2P Product (ENVISAT.UPA-L2P) is generated by the ARC\_L2P Processor, which is based on the processor developed by the ATSR Reprocessing for Climate (ARC) project<sup>2</sup>. Details on the product are given in the ARC\_L2P Product Description document<sup>3</sup>.

The ARC L2P product contains full resolution dual-view Sea Surface Temperature (SST) values; these SST were generated using the ARC SST retrieval and cloud screening which differ from the methods used to produce the SST within the AATSR Level 2 Gridded Surface Temperature (ATS\_NR\_\_2P) products. In addition to SST, the ARC L2P products contain the ATSR Saharan Dust Index (ASDI) and the clear-sky probability estimated by the ARC cloud detection algorithm.

### 7.5.5.2 Input Data

Level 1B product plus auxiliary data.

### 7.5.5.3 Auxiliary Data Used

The auxiliary data used in the ARC\_L2P processor comprise:

- ECMWF-interim wind speed
- ECMWF-interim total column water vapour
- ECMWF-interim sea-ice fraction (for filling auxiliary field in output product)

The ARC processing also uses the RTTOV model and the following auxiliary data are required as inputs for this:

- Atmospheric temperature profile
- Atmospheric water vapour profile
- Log surface pressure
- Sea surface temperature
- Mean sea level pressure
- 10m wind U-component
- 10m wind V-component
- 2m air temperature
- 2m dew point temperature
- Skin temperature

---

#### 7.5.5.4 Processing Performed

The processing performed by the ARC\_L2P processor consists of:

- The derivation of Sea Surface Temperature (SST) and other parameters (e.g. uncertainties, cloud probability, ATSR Saharan Dust Index) from the gridded brightness temperatures of the Level 1B product.

#### 7.5.5.5 Product Structure

The ARC L2P products are produced in NetCDF-4 format, compliant with both the Climate and Forecast (CF) conventions v1.4 and the GHRSST Data Specification (GDS), version 2.0 revision 5<sup>4</sup>.

The netCDF data format is extremely flexible, self-describing, in the sense that each variable in the file has an associated description of what it represents, including physical units if appropriate, and that each value can be located in space (relative to earth-based coordinates) and time (NetCDF Climate and Forecast (CF) Metadata Conventions, Version 1.0-beta5, 2003). NetCDF files include: dimensions, variables, data, and global attributes (for an illustration of this format [click here](#)).

The following web reference documents are applicable to GDS netCDF file formats:

- |                     |   |
|---------------------|---|
| netCDF:             | <a href="http://www.unidata.ucar.edu/packages/netcdf/">http://www.unidata.ucar.edu/packages/netcdf/</a>                                   |
| CF conventions:     | <a href="http://www.cgd.ucar.edu/cms/eaton/cf-metadata/CF-working.html">http://www.cgd.ucar.edu/cms/eaton/cf-metadata/CF-working.html</a> |
| COARDS conventions: | <a href="http://ferret.wrc.noaa.gov/noaa_coop/coop_cdf_profile.html">http://ferret.wrc.noaa.gov/noaa_coop/coop_cdf_profile.html</a>       |
| UDUNITS:            | <a href="http://www.unidata.ucar.edu/packages/udunits/">http://www.unidata.ucar.edu/packages/udunits/</a>                                 |

CF NetCDF data files components are:

- Dimensions,
- Variables,
- Variable Attributes,
- Global Attributes,
- Data.

In the following paragraphs the ARC L2P product components are described with reference to the GDS L2P product format; for the handling of netCDF data files, users are referred to the above web reference documents.

##### 7.5.5.1 ARC L2P filename convention

ARC L2P products follow the GDS 2.0 filename convention which is:

```
{datetime}-{RDAC}-{level}_GHRSST-{SST type}-{product}-{extra info}-v{GDS
version}-fv{file version}.nc
```

Where the variable components denoted with braces, {...}, are summarised in Table 7.5.5.1. For ARC L2P products several of these fields are fixed and the filenaming convention can be simplified to:

```
{datetime}-UPA-{level}_GHRSST-SSTskin-ARC-{extra info}-v02.0-fv01.0.nc
```

---

<sup>4</sup> GHRSST Data Specification (GDS): <https://www.ghrsst.org/documents/q/category/gds-documents/operational/>

**Table 7.5.5.5-1 ARC L2P filename components**

<b>Element</b>	<b>Content</b>	<b>Description</b>
{datetime}	yyyymmddHHMMSS	Identifying date and time for the file in UTC. The time corresponds to the first data in the file
{RDAC}	UPA	The RDAC where the file was created (United Kingdom Multi-Mission Processing and Archiving Facility)
{level}	L2P	Processing level code for file
{SST type}	SSTskin	Type of SST data included in file
{product}	ARC	GHRSST product identifier
{extra info}	ATSR1 ATSR2 AATSR	Used to indicate the source instrument for the data
{GDS version}	02.0	GDS version number used to generate file
{file version}	01.0	File version number

### 7.5.5.6 ARC L2P Global Attributes

ARC L2P products include both global and variable metadata. Global metadata describes the whole file with information such as title, creation date, and the source instrument for the data. Details of the global attributes are given in Table 7.5.5.6-1.

**Table 7.5.5.6-1 ARC L2P global metadata**

<b>Attribute</b>	<b>Content</b>	<b>Description</b>
Conventions	CF-1.4	A text string identifying the netCDF conventions used for the file.
title	Sea Surface Temperature from {atsr}	The title of the dataset. {atsr} is one of ATSR1, ATSR2, or AATSR
summary	This netCDF file contains...	A brief summary of the dataset
references	Embry, O., Merchant...	Published references for the dataset.

time_coverage_duration	PT1H43M40S	Period covered by this product

### 7.5.5.7 ARC L2P Variable Attributes

ARC L2P variable metadata contain information on how a particular variable in the file should be interpreted. This includes both scale and offset values used by data reading software, and titles and comments for human interpretation of the data. Details of the variable attributes are given in Table 7.5.5.7-1.

**Table 7.5.5.7-1 ARC L2P variable metadata**

Attribute	Description
long_name	A free-text descriptive name for the variable
standard_name	The standard name for the variable as defined by CF conventions
references	Published or web-based reference describing the methods used to generate the variable
comment	Other information about the variable or methods used to generate it
units	Text description of the units the data is stored in.
_FillValue	A value used to indicate array elements which contain invalid or missing data
scale_factor	Used to pack data into a smaller datatype. The original data can be recovered using: $\text{value} = \text{scale\_factor} * \text{packed\_data} + \text{add\_offset}$
add_offset	
valid_min	The minimum valid value for the variable
valid_max	The maximum valid value for the variable

### 7.5.5.8 ARC L2P File Contents

ARC L2P products contain SSTs on the 512-km wide swath used by the ATSR instruments. Each SST in the ARC L2P corresponds to a pixel in the source L1B file and is supplied with a probability of being clear as determined by the Bayesian cloud detection algorithm. The variables in an ARC L2P file are given in Table 7.5.5.8-1.

**Table 7.5.5.8-1 ARC L2P variables**

Variable	Description
time	Reference time of the file. Gives the reference time of the file in seconds since 1981-01-01 00:00:00
sst_dtime	Time difference from reference time. Observation time is calculated as time+sst_dtime
lat	Latitude coordinates
lon	Longitude coordinates
sea_surface_temperature	Sea surface skin temperature
solar zenith angle	Solar zenith angle at SST observation
sses_bias	(unused)
sses_standard_deviation	Estimated retrieval uncertainty
synoptically_correlated_uncertainty	Component of uncertainty that is correlated over synoptic scales
radiometric_uncertainty	Component of uncertainty that is due to

Variable	Description
	radiometric noise
I2p_flags	GHRSSST I2P flag variable. Used to flag land pixels and use of D2/D3 retrieval
quality_level	GHRSSST quality level indicator
aerosol_dynamic_indicator	ATSR Saharan Dust Index
probability_clear	Probability of pixel being clear as estimated by Bayesian cloud detection
dt_analysis	(unused)
wind_speed	ECMWF-interim wind speed at time of observation
sea_ice_fraction	ECMWF-interim sea-ice fraction at time of observation

## 7.5.6 ARC L3U Sea Surface Temperature Product

### 7.5.6.1 Description

The ARC L3U Product (ENVISAT.UPA-L3U) is derived from the ARC L2P product (ENVISAT.UPA-L2P) and uses the ARC\_L2P processor, detailed in section 7.5.5. The ARC L3U product differs from the ARC L2P product in that it contains SSTs on a global 0.1 degree grid: 3600 x 1800 cells, instead of at full resolution and contains data only if the quality level is equal to 5. Each SST in the L3U file corresponds to an average of several pixels in the source L1B product. These SST use the ARC SST retrieval and cloud screening. In addition to SST, the ARC L3U products contain the ATSR Saharan Dust Index (ASDI) and the clear-sky probability estimated by the ARC cloud detection algorithm. The ARC L3U product is provided in NetCDF-4 format following GHRSST Data Specifications (GDS) v2.

### 7.5.6.2 Input Data

The ARC L2P product (ENVISAT.UPA-L2P)

### 7.5.6.3 Auxiliary Data Used

Refer to section 7.5.5.3.

### 7.5.6.4 Processing Performed

Refer to section 7.5.5.4.

### 7.5.6.5 Product Structure

Refer to section 7.5.5.5.

#### 7.5.6.5.1 ARC L3U filename convention

Refer to section 7.5.5.5.1 but note that “L2P” is replaced by “L3U”.

### 7.5.6.6 ARC L3U Global Attributes

ARC L3U products include both global and variable metadata. Global metadata describes the whole file with information such as title, creation date, and the source instrument for the data. Details of the ARC L3U global attributes are given in Table 7.5.6.6-1.

Table 7.5.6.6-1 ARC L3U global metadata

Attribute	Content	Description

### 7.5.6.7 ARC L3U Variable Attributes

ARC L3U variable metadata contain information on how a particular variable in the file should be interpreted. This includes both scale and offset values used by data reading software, and titles and comments for human interpretation of the data. Details of the ARC L3U variable attributes are given in Table 7.5.6.7-1.

**Table 7.5.6.7-1 ARC L3U variable metadata**

Attribute	Description
long_name	A free-text descriptive name for the variable
standard_name	The standard name for the variable as defined by CF conventions
references	Published or web-based reference describing the methods used to generate the variable
comment	Other information about the variable or methods used to generate it
units	Text description of the units the data is stored in.
_FillValue	A value used to indicate array elements which contain invalid or missing data
scale_factor	Used to pack data into a smaller datatype. The original data can be recovered using: value = scale_factor * packed_data + add_offset
add_offset	
valid_min	The minimum valid value for the variable
valid_max	The maximum valid value for the variable

### 7.5.6.8 ARC L3U File Contents

ARC L3U files contain SSTs on a global 0.1° grid: 3600 x 1800 cells. Each SST in the L3U file corresponds to an average of several pixels in the source L1B file. The variables in a L3U file are given in Table 7.5.6.8-1.

**Table 7.5.6.8-1 ARC L3U variables**

Variable	Description
time	Reference time of the file. Gives the reference time of the file in seconds since 1981-01-01 00:00:00
sst_dtime	Time difference from reference time. Observation time is calculated as time+sst_dtime
lat	Latitude coordinates
lon	Longitude coordinates
sea_surface_temperature	Sea surface skin temperature
solar zenith angle	Solar zenith angle at SST observation
sses_bias	(unused)
sses_standard_deviation	Estimated retrieval uncertainty
synoptically_correlated_uncertainty	Component of uncertainty that is correlated over synoptic scales
radiometric_uncertainty	Component of uncertainty that is due to radiometric noise
I2p_flags	GHRSSST I2P flag variable. Used to flag land pixels and use of D2/D3 retrieval
quality_level	GHRSSST quality level indicator. Only quality_level 5 pixels are included in ARC L3U products
aerosol_dynamic_indicator	ATSR Saharan Dust Index
probability_clear	Probability of pixel being clear as estimated by Bayesian cloud detection
dt_analysis	(unused)
wind_speed	ECMWF-interim wind speed at time of observation
sea_ice_fraction	ECMWF-interim sea-ice fraction at time of observation
or_number_of_pixels	Number of pixels from the ARC L2P contributing to the SST value

## 7.6 BROWSE PRODUCT

A single Browse product is produced for AATSR.

### 7.6.1 Three Band Colour Composite Browse Product

The browse product is generated systematically from the Level 1B product for all data acquired, and is a three band colour composite product. The three bands are selected to best show the features of the image and vary between daylight and night scenes. The browse product covers a full orbit. A geolocation grid is provided as part of the product. The primary application of the browse product is for on-line viewing by users to aid in ordering. The pixel spacing is 4 km by 4 km.

#### 7.6.1.1 Input Data

Level 1B data plus auxiliary data.

#### 7.6.1.2 Auxiliary Data Used

The only additional Auxiliary Data required to produce the Browse Product is the Browse LUT auxiliary data file (ATS\_BRW\_AX).

#### 7.6.1.3 Processing Performed

The algorithms used to generate the Browse Product perform the following steps:

- sub-sample the Level 1B product;
- choose best three bands for viewing;
- apply contrast enhancement techniques if required.

#### 7.6.1.4 Product Structure

The high level structure of the Browse product is shown below.

**Table 7.6.1.4-1 AATSR Browse Product Structure**

MPH
<b>SPH (includes DSDs)</b>
Summary Quality ADS
Grid pixel latitude and longitude, topographic corrections ADS
Browse MDS

#### 7.6.1.5 Main Product Header

The Main Product Header is defined in Volume 5.

### 7.6.1.6 Specific Product Header

The SPH is identical to the Level 1B product SPH, but with a different DSD list. The format is defined in the table below.

**Table 7.6.1.6-1 AATSR Browse - SPH**

N	Description	Units	Byte Length	Data Type	Dim.
1-35	<b>First 35 fields of the Level 1B SPH described in Table 7.4.1.6-1</b>		2190	-	-
	<i>DSDs for included data sets</i>				
36	<b>DSD (A) - Summary Quality ADS</b>		280	dsd	1
37	<b>DSD (A) - Grid pixel latitude and longitude, topographic corrections ADS</b>		280	dsd	1
38	<b>DSD (M) - Browse MDS</b>		280	dsd	1
39	<b>DSD Spare (279 blank space characters followed by 1 newline character)</b>		280	dsd_sp	1
	<i>DSDs for referenced files</i>				
40	<b>DSD (R) - Level 1B data file from which this browse product was created</b>		280	dsd	1
41	<b>DSD (R) - Browse Data file used to create this product</b>		280	dsd	1
42	<b>DSD Spare (279 blank space characters followed by 1 newline character)</b>		280	dsd_sp	1
	<b>size (in bytes)</b>		<b>4150</b>		

In each DSD of the SPH, the field DS\_NAME is filled as described in the table below.

**Table 7.6.1.6-2 AATSR Browse DS\_NAME**

DSD	DS_NAME
<b>DSD(A) - Summary Quality ADS (SQADS)</b>	SUMMARY_QUALITY_ADS
<b>DSD(A) - Grid pixel latitude and longitude, topographic corrections ADS (LADS)</b>	GEOLOCATION_ADS
<b>DSD (M) - Browse MDS</b>	BROWSE_MDS
<i>DSDs for referenced files</i>	
<b>DSD (R) - Level 1B data file from which this product was created</b>	LEVEL_1B_PRODUCT
<b>DSD (R) - Browse Data file used to create this product</b>	BROWSE_LUT_DATA_FILE

### 7.6.1.7 Data Sets

The contents of the Data Sets are described in the following sections. Data Sets are in mixed binary format. They may contain ASCII strings, but the ASCII strings are not contained within quotation marks as for the MPH/SPH.

#### 7.6.1.7.1 Summary Quality ADS

This ADS is extracted from the Level 1B product and follows the format defined in Table 7.4.1.7.1-1.

### 7.6.1.7.2 Geolocation Grid ADS

The geolocation grid ADS for the browse product contains tie points which can be used to provide geolocation information useful for display purposes. It consists of one ADSR per granule (32 scans = 8 browse product lines). The format of each ADSR is defined below.

Table 7.6.1.7.2-1 Browse Grid Pixel Latitude and Longitude ADSR					
N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Attachment flag</b> (set to 1 if all MDSRs corresponding to this ADSR are zero. Set to 0 otherwise)	-	1	uc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>image scan y coordinate</b>	m	4	sl	1
5	<b>tie point latitudes</b>	10-6 deg	92	sl	23
6	<b>tie point longitudes</b>	10-6 deg	92	sl	23
Size			<b>204</b>		

### 7.6.1.7.3 Browse MDS<sup>5</sup>

The browse MDS contains R,G, B values used for display of the browse image. The RGB values are interleaved by pixel (i.e. each pixel coded with 3 consecutive values: R, G, B) to follow standard computer image formats. The format of each MDSR is defined below.

Table 7.6.1.7.3-1 MDS Record					
N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Nadir UTC time in MJD format</b>	MJD	12	mjd	1
2	<b>Record Quality Indicator</b> -1 if all data values are zero, 0 otherwise	-	1	sc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>image scan y coordinate</b>	m	4	sl	1
5	<b>Red, Green, Blue channel intensity for pixel 1- 128</b>	intensity	384	uc	3* 128
Size			<b>404</b>		

<sup>5</sup> Changed from product described in R-41 to match the format of the MERIS browse product.

### 7.6.1.8 Size Estimate

The size estimate assumes there are 40256 MDSRs in the original Level 1B product. Therefore there are 10064 MDSRs in the browse product. There are 1258 ADSRs for both the SQ ADS and the Geolocation ADS (i.e., granule spacing not changed from Level 1B product).

<b>Table 7.6.1.8-1 Browse Product Size Estimate</b>		
Description	Record size (byte)	Data Set Size (Mbyte/ product)
MPH	1247	0.001247
SPH	4150	0.00415
SQ ADS	86	0.11
Geolocation ADS	204	0.257
MDS	404	4.066
<b>TOTAL</b>		<b>5 MB</b>

## 7.7 AUXILIARY DATA FILES

The following sections provide definitions of the auxiliary data files used in AATSR processing.

### 7.7.1 Level 1B Processor Configuration Data File

This file contains parameters used to configure the processor for Level 1B processing.

- FILE ID: ATS\_PC1\_AX
- TYPE: Auxiliary
- USE: Level 1B processing
- UPDATED: Infrequently.
- SIZE: MPH(1247 bytes) + SPH(378 bytes) + GADS(232 bytes)

#### 7.7.1.1 Format

The high level breakdown of the file is shown below.

**Table 7.7.1.1-1 Schematic Structure of the Level 1B Processor Configuration File**

MPH
SPH - standard Auxiliary Data SPH as described in Volume 16 with 1 DSD: <i>DSD for the Processor Configuration GADS</i>
Processor Configuration GADS

#### 7.7.1.1.1 Processor Configuration Data GADS

The format of the GADS is defined below.

**Table 7.7.1.1.1-1 Processor Configuration Data GADS**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>blanking pulse calibration code</b> <b>blanking_pulse_calibration_flag</b>	-	4	sl	1
2	<b>Number of scans in calibration period</b>	-	4	sl	1
3	<b>Reserved for visible calibration option code</b>	-	4	sl	1

## 7.7.2 AATSR Instrument Data File

- FILE ID: ATS\_INS\_AX
- TYPE: Auxiliary
- USE: Level 1B processing
- UPDATED: Infrequently.
- SIZE: MPH(1247 bytes) + SPH(1778 bytes) + GADS(approx. 201 kBytes)

### 7.7.2.1 Format

The high level breakdown of the file is shown below.

**Table 7.7.2.1-1 Schematic Structure of the Instrument Data File**

MPH
<b>SPH - standard Auxiliary Data SPH as described in Volume 16 with 6 DSDs:</b>
<i>DSD for the General Parameters GADS</i>
<i>DSD for the MUDT GADS</i>
<i>DSD for Conversion Parameters GADS</i>
<i>DSD for Limits GADS</i>
<i>DSD for Surveillance Limits GADS</i>
<i>DSD for Validation Parameters GADS</i>
<b>General Parameters GADS</b>
<b>Master Unpacking Definition Table GADS</b>
<b>Conversion Parameters GADS</b>
<b>Limits GADS</b>
<b>Surveillance Limits GADS</b>
<b>Validation Parameters GADS</b>

#### 7.7.2.1.1 General Parameters GADS

The format of this GADS is shown below.

**Table 7.7.2.1.1-1 General Parameters for Unpacking Source Packet Auxiliary Data GADS**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>aux_tot:</b> Total number of auxiliary data items in MUDT	-	4	sl	1
2	<b>aux_val_tot:</b> Total number of sets of auxiliary limits data items	-	4	sl	1
3	<b>n_conv:</b> Total number of auxiliary items for conversion	-	4	sl	1
4	<b>n_surv_tot:</b> Total number of surveillance limit specifications	-	4	sl	1
5	<b>Spare</b>	-	12	uc	12
<b>Size</b>			<b>28</b>		

### 7.7.2.1.2 Master Unpacking Definition Table GADS

The GADS consists of several records, 1 record for each auxiliary data item within the source packet. The format of the GADS record is shown below. All auxiliary data, the data item identifiers, their unpacking and conversion parameters will be defined in the detailed AATSR Telemetry Specifications, from which the total number of auxiliary data items will also be derived. This is expected to be less than 1000.

**Table 7.7.2.1.2-1 Master Unpacking Definition Table (MUDT) GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>auxiliary item identifier</b>	-	5	uc	5
2	<b>word number in packet containing auxiliary item</b>	-	2	us	1
3	<b>mask to extract auxiliary item from word</b>	-	2	ss	1
4	<b>shift to normalise</b>	-	2	us	1
<b>Size</b>			<b>11</b>		

### 7.7.2.1.3 Conversion Parameters GADS

The GADS consists of several records, 1 record for each auxiliary data item within the source packet. The format of each GADS record is defined below. A maximum of 1000 records are expected.

**Table 7.7.2.1.3-1 Conversion Parameters GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>auxiliary item identifier</b>	-	5	uc	5
2	<b>function identifier</b>	-	3	uc	3
3	<b>parameter list</b> (Note 1)	variable	160	do	20
<b>Size</b>			<b>168</b>		

**Note 1:** The type of these fields depends on the context. In the majority of cases the definition “do” (double float) is appropriate, but in certain cases the fields have to be interpreted as ASCII strings (“8\*uc”) in accordance with the processing model.

### 7.7.2.1.4 Limits GADS

This GADS contains parameters used to check the non-converted auxiliary data values. The GADS consists of several records, 1 record for each auxiliary data item within the source packet. The format of each GADS record is defined below. A maximum of 1000 records are expected.

**Table 7.7.2.1.4-1 Limits GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>auxiliary identifier limits</b>	-	5	uc	5
2	<b>aux validation lower limit</b>	-	2	us	1
3	<b>aux validation upper limit</b>	-	2	us	1
<b>Size</b>			<b>9</b>		

### 7.7.2.1.5 Surveillance Limits GADS

This GADS contains parameters used for checks on converted auxiliary items. The GADS consists of several records, 1 record for each auxiliary data item within the source packet. The format of each GADS record is defined below. A maximum of 1000 records are expected.

**Table 7.7.2.1.5-1 Surveillance Limits GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>surveillance limit auxiliary identifiers</b>	-	5	uc	5
2	<b>surveillance lower limit</b>	-	4	fl	1
3	<b>surveillance upper limit</b>	-	4	fl	1
Size			<b>13</b>		

### 7.7.2.1.6 Validation Parameters GADS

This GADS provides information for specialised checks of converted auxiliary items. The format of the GADS is shown below.

**Table 7.7.2.1.6-1 Validation Parameters GADS**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>prt_mean_difference</b>	Deg K	8	do	1
2	<b>max_hbb_prt_mean_diff</b>	Deg K	8	do	1
3	<b>max_cbb_prt_mean_diff</b>	Deg K	8	do	1
4	<b>scp2_6_temp_diff</b>	Deg K	8	do	1
5	<b>scp7_10_temp_diff</b>	Deg K	8	do	1
6	<b>prt8_fixed_val</b>	Digitised counts	2	ss	1
7	<b>prt8_variance</b>	Digitised counts	2	ss	1
Size			<b>44</b>		

## 7.7.3 Visible Calibration Data File

- FILE ID: ATS\_VC1\_AX
- TYPE: Auxiliary
- USE: Level 1B processing
- UPDATED: Daily / orbital
- SIZE: MPH(1247 bytes) + SPH(658 bytes) + GADS(154 bytes)

### 7.7.3.1 Format

The high level breakdown of the file is shown below.

**Table 7.7.3.1-1 Schematic Structure of the Visible Calibration Data File**

MPH
<b>SPH - standard Auxiliary Data SPH as described in Volume 16 with 2 DSDs:</b>
<i>DSD for the Visible channel calibration parameters GADS</i>
<i>DSD (R) for the visible calibration drift table</i>
<b>Visible channel calibration parameters GADS</b>

#### 7.7.3.1.1 Visible Channel Calibration Parameters GADS

The format of the GADS is defined in the table below.

**Table 7.7.3.1.1-1 Visible Channel Calibration Parameters GADS**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>Time of cal in MJD format</b>	MJD	12	mjd	1
2	<b>Attachment flag (always set to zero)</b>	-	1	uc	1
3	<b>Spare</b>	-	3	uc	3
4	<b>1.6 micron slope</b>	-	4	fl	1
5	<b>0.870 micron slope</b>	-	4	fl	1
6	<b>0.670 micron slope</b>	-	4	fl	1
7	<b>0.555 micron slope</b>	-	4	fl	1

29	<b>-X BB Pixel Noise (0.67 micron)</b>	-	4	fl	1
30	<b>-X BB Pixel Noise (0.55 micron)</b>	-	4	fl	1
31	<b>(Reserved for parity indicator)</b>	-	2	ss	1
32	<b>Spare</b>	-	20	uc	20
<b>Size</b>			<b>154</b>		

## 7.7.4 General Calibration Data File

- FILE ID: ATS\_GC1\_AX
- TYPE: Auxiliary
- USE: Level 1B processing
- UPDATED: Infrequently.
- SIZE: MPH(1247 bytes) + SPH(1218 bytes) + GADS(approx. 226 kbytes)

### 7.7.4.1 Format

The high level breakdown of the file is shown below.

**Table 7.7.4.1-1 Schematic Structure of the General Calibration Data File**

MPH
<b>SPH - standard Auxiliary Data SPH as described in Volume 16 with 4 DSDs:</b>
<i>DSD for the General Parameters GADS</i>
<i>DSD for the Temperature to Radiance LUT GADS</i>
<i>DSD for the Radiance to Brightness Temperature LUT GADS</i>
<i>DSD for the 1.6 micron Channel Non-linearity Correction LUT GADS</i>
<b>General Parameters GADS</b>
<b>Temperature to Radiance LUT GADS</b>
<b>Radiance to Brightness Temperature LUT GADS</b>
<b>1.6 micron Channel Non-linearity Correction LUT GADS</b>

## 7.7.4.1.1 General Parameters GADS

The format of the General Parameters GADS is defined below.

**Table 7.7.4.1.1-1 General Parameters for Infrared Channel Calibration**

N	Description	Units	Byte Length	Data Type	Dim.
1	Emissivity factor for MXBB, 12 micron channel		8	do	1
2	Emissivity factor for MXBB, 11 micron channel		8	do	1
3	Emissivity factor for MXBB, 3.7 micron channel		8	do	1
4	Emissivity factor for PXBB, 12 micron channel		8	do	1
5	Emissivity factor for PXBB, 11 micron channel		8	do	1
6	Emissivity factor for PXBB, 3.7 micron channel		8	do	1
7	Number of entries in Temperature to Radiance LUT or size_of_LUT	-	2	ss	1
8	Increment in Temperature to Radiance LUT	K	8	do	1
9	First value in Temperature to Radiance LUT	K	8	do	1
10	Last value in Temperature to Radiance LUT	K	8	do	1
11	Number of entries in 12 micron Radiance to Brightness Temperature LUT	-	2	ss	1
12	Increment in 12 micron Radiance to Brightness Temperature LUT	Wcm-2 sr-1	8	do	1
13	First value in 12 micron Radiance to Brightness Temperature LUT	Wcm-2 sr-1	8	do	1
14	Last value in 12 micron Radiance to Brightness Temperature LUT	Wcm-2 sr-1	8	do	1
15	Number of entries in 11 micron Radiance to Brightness Temperature LUT	-	2	ss	1
16	Increment in 11 micron Radiance to Brightness Temperature LUT	Wcm-2 sr-1	8	do	1
17	First value in 11 micron Radiance to Brightness Temperature LUT	Wcm-2 sr-1	8	do	1
18	Last value in 11micron Radiance to Brightness Temperature LUT	Wcm-2 sr-1	8	do	1

20	Increment in 3.7 micron Radiance to Brightness Temperature LUT	Wcm-2 sr-1	8	do	1
21	First value in 3.7 micron Radiance to Brightness Temperature LUT	Wcm-2 sr-1	8	do	1
22	Last value in 3.7 micron Radiance to Brightness Temperature LUT	Wcm-2 sr-1	8	do	1
23	Number of entries in 1.6 micron Channel Non-linearity Correction LUT	-	2	ss	1
24	Increment in 1.6 micron Channel Nonlinearity Correction LUT	-	8	do	1
25	First value in 1.6 micron Channel Nonlinearity Correction LUT	-	8	do	1
26	Last value in 1.6 micron Channel Nonlinearity Correction LUT	-	8	do	1
27	Spare	-	20	uc	20
Size			198		

#### 7.7.4.1.2 Temperature to Radiance LUT GADS

There are expected to be 4000 records in this GADS. The format of each GADS record is defined below.

**Table 7.7.4.1.2-1 Temperature to Radiance LUT GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	temperature	K	8	do	1
2	radiance_lut [12 micron]	Wcm-2 sr-1	8	do	1
3	radiance_lut [11 micron]	Wcm-2 sr-1	8	do	1
4	radiance_lut [3.7 micron]	Wcm-2 sr-1	8	do	1
Size			<b>32</b>		

#### 7.7.4.1.3 Radiance to Brightness Temperature LUT GADS

There are expected to be 4000 records in this GADS. The format of each GADS record is defined below.

**Table 7.7.4.1.3-1 Radiance To Brightness Temperature LUT**

N	Description	Units	Byte Length	Data Type	Dim.
1	temperature_lut [12 micron]	K	8	do	1
2	temperature_lut [11 micron]	K	8	do	1
3	temperature_lut [3.7 micron]	K	8	do	1
Size			<b>24</b>		

#### 7.7.4.1.4 1.6 micron Channel Non-linearity Correction LUT GADS

There are expected to be 101 records in this GADS. The format of each GADS record is defined below.

**Table 7.7.4.1.4-11.6 micron Channel Non-linearity Correction LUT**

N	Description	Units	Byte Length	Data Type	Dim.
1	Uncorrected count table entry	-	8	do	1
2	Corrected count table entry	-	8	do	1
Size			<b>16</b>		

### 7.7.5 Level 1b Characterisation Data File

- FILE ID: ATS\_CH1\_AX
- TYPE: Auxiliary
- USE: Level 1B processing
- UPDATED: Infrequently.
- SIZE: MPH(1247 bytes) + SPH(378 bytes) + GADS(176 bytes)

### 7.7.5.1 Format

The high level breakdown of the file is shown below.

**Table 7.7.5.1-1 Schematic Structure of the Level 1B Characterisation File**

<b>MPH</b>
<b>SPH - standard Auxiliary Data SPH as described in Volume 16 with 1 DSD:</b> <i>DSD for the Characterisation GADS</i>
<b>Characterisation GADS</b>

#### 7.7.5.1.1 Characterisation GADS

The GADS is defined in the table below.

**Table 7.7.5.1.1-1 Characterisation GADS**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>cone angle</b>	radians	4	fl	1
2	<b>mirror offset angle</b>	radians	4	fl	1
3	<b>x misalignment correction</b>	radians	4	fl	1
4	<b>y misalignment correction</b>	radians	4	fl	1
5	<b>z misalignment correction</b>	radians	4	fl	1
6	<b>AOCS parameter Cx</b>	deg.	8	do	1
7	<b>AOCS parameter Cy</b>	deg.	8	do	1

**7.7.8.1.3 12 Micron Gross Cloud Test LUT GADS**

The GADS contains one record for each latitude index  $i = 0, \dots, 179$  and for each month  $j = 0, \dots, 11$ ). The format of each GADS record is defined below.

**Table 7.7.8.1.3-1 12 Micron Gross Cloud Test LUT GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>12 micron threshold nadir</b>	K/100	2	ss	1
2	<b>12 micron threshold forward</b>	K/100	2	ss	1
	<b>Size</b>		<b>4</b>		

#### 7.7.8.1.4 12Micron Gross Cloud Test Land Surface LUT GADS

The GADS contains one record for each latitude index  $i = 0, \dots, 179$  and for each month  $j = 0, \dots, 11$ ). The format of each GADS record is defined below.

**Table 7.7.8.1.4-112 Micron Gross Cloud Test Land Surface LUT GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>12 micron land threshold nadir</b>	K/100	2	ss	1
2	<b>12 micron land threshold forward</b>	K/100	2	ss	1
Size			<b>4</b>		

#### 7.7.8.1.5 Thin Cirrus Test LUT GADS

This GADS contains one record for each temperature level  $i = 0, \dots, 60$  and for each across-track band  $j = 5, \dots, 9$ ). The format of each GADS record is shown below.

**Table 7.7.8.1.5-1 Thin Cirrus Test LUT GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>nadir_threshold[i][j]</b>	K/100	2	ss	1
2	<b>frwrd_threshold[i][j]</b>	K/100	2	ss	1
Size			<b>4</b>		

#### 7.7.8.1.6 Medium/High Level Cloud Test LUT GADS

This GADS contains one record for each temperature level  $i = 0, \dots, 120$ . The format of the GADS record is defined in the table below.

**Table 7.7.8.1.6-1 Medium/High Level Cloud Test LUT GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>med_high_level_threshold[i], nadir</b>	K/100	2	ss	1
2	<b>med_high_level_threshold[i], forward</b>	K/100	2	ss	1
Size			<b>4</b>		

#### 7.7.8.1.7 Fog/Low Stratus Test LUT GADS

This GADS contains one record for each across-track band  $j = 5, \dots, 9$ . The format of the GADS record defined in the table below.

**Table 7.7.8.1.7-1 Fog/Low Stratus Test LUT**

N	Description	Units	Byte Length	Data Type	Dim.
1	<b>fog_threshold[j], nadir</b>	K/100	2	ss	1
2	<b>fog_threshold[j], forward</b>	K/100	2	ss	1
Size			<b>4</b>		

### 7.7.8.1.8 11/12 Micron Nadir/Forward Test LUT GADS

The format of the GADS is defined below.

**Table 7.7.8.1.8-1 11/12 Micron Nadir/Forward Test LUT GADS**

N	Description	Units	Byte Length	Data Type	Dim.
1	view_diff_slope[j] (For each across-track band j = 5,...9)	-	20	fl	5
2	view_diff_offset[j] (For each across-track band j = 5,...9)	-	20	fl	5
3	ir11_ir12_view_diff_thresh	K/100	2	ss	1
Size			<b>42</b>		

### 7.7.8.1.9 11/3.7 Micron Nadir/Forward Test LUT GADS

The format of the GADS is defined below.

**Table 7.7.8.1.9-1 11/3.7 Micron Nadir/Forward Test LUT GADS**

N	Description	Units	Byte Length	Data Type	Dim.
1	constant coefficient a0[j] (For each across-track band j = 5,...9)	-	20	fl	5
2	linear coefficient a1[j] (For each across-track band j = 5,...9)	-	20	fl	5
3	quadratic coefficient a2[j] (For each across-track band j = 5,...9)	-	20	fl	5
4	ir37_ir11_view_diff_thresh	K/100	2	ss	1
Size			<b>62</b>		

### 7.7.8.1.10 Infrared Histogram Test LUT GADS

The format of the GADS is defined below.

**Table 7.7.8.1.10-1 Infrared Histogram Test LUT GADS**

N	Description	Units	Byte Length	Data Type	Dim.
1	min_for_ir11_ir12_histogram	TBD	2	ss	1

## 7.7.11 SST Retrieval Coefficient Data File

- FILE ID: ATS\_SST\_AX
- TYPE: Auxiliary
- USE: Level 2 processing
- UPDATED: Infrequently.
- SIZE: MPH(1247 bytes) + SPH(938 bytes) + GADS( 19376 bytes)

### 7.7.11.1 Format

The high level breakdown of the file is shown below.

**Table 7.7.11.1-1 Schematic Structure of the SST Retrieval Coefficients Data File**

MPH
SPH - standard Auxiliary Data SPH as described in Volume 16 with 3 DSDs:
DSD for the Across-track Band Mapping Look-up Table GADS
DSD for the SST Retrieval Coefficients GADS
DSD for the Averaged SST Retrieval Coefficients GADS
Across-track Band Mapping LUT GADS
SST Retrieval Coefficients GADS
Averaged SST Retrieval Coefficients GADS

#### 7.7.11.1.1 Across-track Band Mapping LUT GADS

The GADS contains one entry for each value of the pixel index  $j = 0, 511$ . The format of the GADS record is defined in the table below.

**Table 7.7.11.1.1-1 Across-track Band Mapping Look-up Table GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	pixel index (j)	-	2	ss	1
2	Across-track band index (map index)	-	2	ss	1
	Size		4		

#### 7.7.11.1.2 SST Retrieval Coefficients GADS

This GADS contains several (15) GADS records. The coefficient values to be contained in this table will be determined by numerical modelling when the frequency responses of the infrared channels have been characterised.

The GADS contains one record each latitude zone  $i = 1,2,3$ , and for each cross-track band  $j = 0, ..,37$ ). The format of the GADS record is defined in the table below.

**Table 7.7.11.1.2-1 SST Retrieval Coefficients GADS Record**

N	Description	Units	Byte Length	Data Type	Dim.
1	a[i][j][0]	K/100	4	fl	1
2	a[i][j]1	-	4	fl	1

N	Description	Units	Byte Length	Data Type	Dim.
3	a[i][j][2]	-	4	fl	1
4	b[i][j][0]	K/100	4	fl	1
5	b[i][j][1]	-	4	fl	1
6	b[i][j][2]	-	4	fl	1
7	b[i][j][3]	-	4	fl	1
8	c[i][j][0]	K/100	4	fl	1
9	c[i][j][1]	-	4	fl	1
10	c[i][j][2]	-	4	fl	1
11	c[i][j][3]	-	4	fl	1
12	c[i][j][4]	-	4	fl	1
13	d[i][j][0]	K/100	4	fl	1
14	d[i][j][1]	-	4	fl	1
15	d[i][j][2]	-	4	fl	1
16	d[i][j][3]	-	4	fl	1
17	d[i][j][4]	-	4	fl	1
18	d[i][j][5]	-	4	fl	1
19	d[i][j][6]	-	4	fl	1
Size			<b>76</b>		

#### 7.7.11.1.3 Averaged SST Retrieval Coefficients GADS

This GADS contains several (15) GADS records. The coefficient values to be contained in this table will be determined by numerical modelling when the frequency responses of the infrared channels have been characterised.

The GADS contains one record each latitude zone i = 1,2,3, and for each cross-track band j = 5, ..,9).

The format of the GADS record is identical to that described above in Table 7.7.11.1.2-1.

#### 7.7.12 AATSR LST Retrieval Coefficients Data Product

- FILE ID: ATS\_LST\_AX
- TYPE: Auxiliary
- USE: Level 2 processing
- UPDATED: Infrequently.
- SIZE: MPH(1247 bytes) + SPH( 1778 bytes) + GADS( 13479188 )

### 7.7.12.1 Format

The high level breakdown of the file is shown below.

**Table 7.7.12.1-1 Schematic Structure of the LST retrieval coefficients data product**

MPH
SPH - standard Auxiliary Data SPH as described in Volume 16 with 6 DSDs:
<i>DSD for the General Parameters GADS</i>
<i>DSD for the Surface Vegetation Class GADS</i>
<i>DSD for the Vegetation Fraction GADS</i>
<i>DSD for the Climatology Data GADS</i>
<i>DSD for the Topographic Variance Flags GADS</i>
<i>DSD for the LST Retrieval Coefficients GADS</i>
<b>General Parameters GADS</b>
<b>Surface Vegetation Class GADS</b>
<b>Vegetation Fraction GADS</b>
<b>Climatology Data GADS</b>
<b>Topographic Variance Flags GADS</b>
<b>LST Retrieval Coefficients GADS</b>

#### 7.7.12.1.1 General Parameters for Land Surface Temperature Retrieval.

**Table 7.7.12.1.1-1 General Parameters for Land Surface Temperature Retrieval**

N	Description	Units	Byte Length	Data Type	Dim
1	<b>D: Water vapour factor for LST retrieval</b>	-	4	fl	1
2	<b>M: Angle factor for LST retrieval</b>	-	2	ss	1
3	<b>N_CLASS: Number of veg. classes for LST</b>	-	2	ss	1
4	<b>Spare</b>	-	12	ss	1
<b>Size</b>			<b>20</b>		

#### 7.7.12.1.2 Surface Vegetation Class for Land Surface Temperature Retrieval.

File contains one record for each parallel of latitude i=0, ..., 359

**Table 7.7.12.1.2-1 Vegetation Fraction for Land Surface Temperature Retrieval**

N	Description	Units	Byte Length	Data Type	Dim
1 ... 720	<b>Vegetation class index [360][720]</b>	-	1440	ss	2
<b>Size</b>			<b>1440</b>		

### 7.7.12.1.3 Vegetation Fraction for Land Surface Temperature Retrieval

File contains one record for each parallel of latitude i=0, ..., 359 and for each month m=0, ..., 11

**Table 7.7.12.1.3-1 Vegetation Fraction for Land Surface Temperature Retrieval**

N	Description	Units	Byte Length	Data Type	Dim
1 ... 720	<b>Vegetation Fraction[12][360][720]</b>	0.001	1440	ss	2
Size			<b>1440</b>		

### 7.7.12.1.4 Climatology Data for Land Surface Temperature Retrieval

File contains one record for each parallel of latitude i=0, ..., 359 and for each month m=0, ..., 11

**Table 7.7.12.1.4-1 Climatology Data for Land Surface Temperature Retrieval**

N	Description	Units	Byte Length	Data Type	Dim
1... 720	<b>Precipitable water[12][360][720]</b>	0.01 mm	1440	ss	2
Size			<b>1440</b>		

### 7.7.12.1.5 Topographic Variance flagsfor Land Surface Temperature Retrieval

File contains one record for each parallel of latitude i=0, ..., 359

**Table 7.7.12.1.5-1 Topographic Variance for Land Surface Temperature Retrieval**

N	Description	Units	Byte Length	Data Type	Dim
1... 720	<b>Topographic variance flags [360][720]</b>	-	1440	ss	2
Size			<b>1440</b>		

### 7.7.12.1.6 Land Surface Temperature Retrieval Coefficients

**Table 7.7.12.1.6-1 Land Surface Temperature Retrieval coefficients**

N	Description	Units	Byte Length	Data Type	Dim
1	<b>LST Coefficient A0 (day-time)</b>	K/100	4	fl	1
2	<b>LST Coefficient A1(day-time)</b>	-	4	fl	1
3	<b>LST Coefficient A2 (day-time)</b>	-	4	fl	1

Size			<b>24</b>		

## 7.7.13 ENVISAT-1 Precision Orbit Data Files

Both DORIS and FOS orbit state vector files may be used during processing. Refer to Volume 9 and Volume 16, respectively.

### 7.7.14 ENVISAT-1 Attitude File

Refer to Volume 16.

*This page has been left intentionally blank*

## 7.8 AATSR PRODUCT SUMMARY SHEETS

The information presented on the following pages is a record of the data stored in the Data Dictionary Tool (DDT) Product Summary Sheets. The DDT contains data formats and descriptions for all products produced by the ENVISAT PDS.

### AATSR Level 0

<b>PRODUCT ID</b>	ATS_NL_0P
<b>PRODUCT NAME</b>	AATSR Level 0
<b>DESCRIPTION</b>	This product contains time ordered, annotated, Instrument Source Packets from the AATSR sensor.
<b>APPLICATIONS</b>	Archived product forming basis for all higher level processing
<b>DELIVERY TIME</b>	This product is available for internal PDS use within 3 hours of data take from the PDHS. This product is available from the LRAC starting 2 weeks after data take.
<b>COVERAGE</b>	512 km by 40 000 km
<b>THROUGHPUT</b>	1 product per orbit. Satellite data generation at 651 kbps
<b>PRODUCT SIZE</b>	max. 488.25 Mbytes per product NOTE: Size assumes a nominal 100 minutes x 651 kbps, and assumes a negligible size for header information.
<b>GEOMETRICAL SAMPLING</b>	N/A
<b>GEOMETRIC RESOLUTION</b>	N/A
<b>GEOMETRIC ACCURACY</b>	N/A
<b>RADIOMETRIC RESOLUTION</b>	N/A, Coded on 12 bits for all 7 channels
<b>RADIOMETRIC ACCURACY</b>	N/A
<b>AUXILIARY DATA</b>	Orbit state vectors, SBT/UTC time conversion parameters
<b>ALGORITHMS USED</b>	Satellite Positioning, UTC Time Conversion
<b>NOTES</b>	produced systematically

## AATSR Gridded brightness temperature and reflectance

<b>PRODUCT ID</b>	ATS_TOA_1P
<b>PRODUCT NAME</b>	AATSR Gridded brightness temperature and reflectance
<b>DESCRIPTION</b>	The product contains geolocated, radiometrically and geometrically corrected brightness temperature/radiance images. The images are oriented in the along track /across track directions. Both the forward and nadir views are represented in the product (7 forward and 7 nadir) but the two views are 'co-located' as a result of geometric correction. The pixels are classified based on contents and so indicated by a flag for each pixel.
<b>APPLICATIONS</b>	Engineering foundation product enabling the derivation (via higher level processing) of sea surface temperature, land, and cloud parameters.
<b>DELIVERY TIME</b>	NRT product is available within 3 hours of sensor data take from the PDHS. OFL product is available from the LRAC starting 2 weeks after data take.
<b>COVERAGE</b>	512 km by 40 000 km of coverage
<b>THROUGHPUT</b>	1 product per orbit (100 minutes)
<b>PRODUCT SIZE</b>	max. 764 MB / product
<b>GEOMETRICAL SAMPLING</b>	Resampled to approx. 1km by 1km along track
<b>GEOMETRIC RESOLUTION</b>	Information not available
<b>GEOMETRIC ACCURACY</b>	Information not available
<b>RADIOMETRIC RESOLUTION</b>	Information not available. Coded on 16 bits/sample
<b>RADIOMETRIC ACCURACY</b>	For VIS/NIR: 5% relative to sun; For IR: < 0.1 K
<b>AUXILIARY DATA</b>	Orbit State Vectors; SBT/UTC time conversion parameters; SQ ADS; grid pixel lat/long ADS; scan pixel x/y ADS; Nadir view solar angles ADS; Forward view solar angles ADS; Visible calibration coef. ADS; scan and pixel number ADSs (forward and nadir views)
<b>ALGORITHMS USED</b>	Extraction and validation of source packets; Calibration of the AATSR visible and IR channels; Geolocation of the data; resampling to a rectangular grid of image pixels; pixel classification; Cloud clearing
<b>NOTES</b>	Produced systematically from Level 0 product. On demand disseminations of multiple of minimum scene size of 512 km by 512 km.

## **AATSR geophysical product (full resolution)**

<b>PRODUCT ID</b>	ATS_NR_2P
<b>PRODUCT NAME</b>	AATSR geophysical product (full resolution)
<b>DESCRIPTION</b>	This product contains the values various geophysical parameters for each pixel, dependent on the classification of the pixel. Parameters include SST over oceans, NVI over land, Cloud Top Temp. for cloud pixels, and Brightness Temp for unclassified pixels.
<b>APPLICATIONS</b>	Measurement of geophysical parameters
<b>DELIVERY TIME</b>	NRT product available in PDHS within 3 hours of data take. OFL product available from the PAC starting 2 weeks after data take.
<b>COVERAGE</b>	512 km by 40000 km
<b>THROUGHPUT</b>	1 product per orbit (approx. 100 minutes)
<b>PRODUCT SIZE</b>	max. 133 MB / product
<b>GEOMETRICAL SAMPLING</b>	1km by 1km cells (nominal)
<b>GEOMETRIC RESOLUTION</b>	Info. not available
<b>GEOMETRIC ACCURACY</b>	Info. not available
<b>RADIOMETRIC RESOLUTION</b>	Coded on 16 bits/sample, dependent on gain and channel
<b>RADIOMETRIC ACCURACY</b>	For VIS/NIR: 5% relative to sun; For IR: < 0.1 K
<b>AUXILIARY DATA</b>	Orbit State Vectors; SBT/UTC time conversion parameters; Summary Quality ADS (SQ ADS); Grid pixel lat/long ADS; scan pixel x/y ADS; Nadir view solar angles ADS; Forward view solar angles ADS; scan and pixel number ADSs (nadir and forward views)
<b>ALGORITHMS USED</b>	Derivation of geophysical parameters from the Level 1B product
<b>NOTES</b>	Produced systematically from Level 1B product. On demand disseminations of multiple of minimum scene size of 512 km by 512 km.

## AATSR averaged geophysical product

<b>PRODUCT ID</b>	ATS_AR_2P
<b>PRODUCT NAME</b>	AATSR averaged geophysical product
<b>DESCRIPTION</b>	This is the global monitoring product for climatology applications. Contains average measurements for 50 km, 17 km 30 arc minutes, and 10 arc minute cells.
<b>APPLICATIONS</b>	Global monitoring for oceanography, meteorology and climatology.
<b>DELIVERY TIME</b>	NRT product available in PDHS from 3 hours after data take. OFL product available from the PAC starting 2 weeks after data take.
<b>COVERAGE</b>	512 by 40 000 km
<b>THROUGHPUT</b>	1 product per orbit (100 minutes)
<b>PRODUCT SIZE</b>	max. 56MB/product
<b>GEOMETRICAL SAMPLING</b>	50 km by 50 km, 17 km by 17 km, 30 arc minute by 30 arc minute, and 10 arc minute by 10 arc minute.
<b>GEOMETRIC RESOLUTION</b>	info. not available
<b>GEOMETRIC ACCURACY</b>	info. not available
<b>RADIOMETRIC RESOLUTION</b>	0.01 deg. for SST
<b>RADIOMETRIC ACCURACY</b>	0.5 K for SST
<b>AUXILIARY DATA</b>	Orbit State Vectors; SBT/UTC time conversion parameters;
<b>ALGORITHMS USED</b>	Spatial averaging of Level 2 geophysical parameters; calculation of other statistics.
<b>NOTES</b>	Produced systematically from Level 2 geophysical product.

## **AATSR Spatially Averaged Sea surface Temperature for Meteo Users**

<b>PRODUCT ID</b>	ATS_MET_2P
<b>PRODUCT NAME</b>	AATSR Spatially Averaged Sea surface Temperature for Meteo Users
<b>DESCRIPTION</b>	This product contains spatially averaged sea surface temperatures extracted from the ATS_AR__2P product.
<b>APPLICATIONS</b>	This product is intended for Meteo users.
<b>DELIVERY TIME</b>	NRT only
<b>COVERAGE</b>	full orbit/product
<b>THROUGHPUT</b>	1 product per orbit
<b>PRODUCT SIZE</b>	3.22 MB/product
<b>GEOMETRICAL SAMPLING</b>	10 arc-minute averaging
<b>GEOMETRIC RESOLUTION</b>	Info. not available
<b>GEOMETRIC ACCURACY</b>	Info. not available
<b>RADIOMETRIC RESOLUTION</b>	Info. not available
<b>RADIOMETRIC ACCURACY</b>	Info. not available
<b>AUXILIARY DATA</b>	Orbit State Vectors; SBT/UTC time conversion parameters;
<b>ALGORITHMS USED</b>	Extraction from ATS_AR__2P
<b>NOTES</b>	Produced systematically.

## AATSR browse image

<b>PRODUCT ID</b>	ATS_AST_BP
<b>PRODUCT NAME</b>	AATSR browse image
<b>DESCRIPTION</b>	3 band colour product derived from Level 1B data. Three bands will be chosen to form a colour composite image. Choice of bands may vary between night and daylight images. Samples are taken every 4 km by 4km.
<b>APPLICATIONS</b>	Aids user selection of products
<b>DELIVERY TIME</b>	NRT product available to users from the PDHS within 3 hours of data take.
<b>COVERAGE</b>	512 km by 40 000 km
<b>THROUGHPUT</b>	1 product per orbit (100 minutes).
<b>PRODUCT SIZE</b>	max 5 MB/product
<b>GEOMETRICAL SAMPLING</b>	4 km by 4 km subsampling
<b>GEOMETRIC RESOLUTION</b>	N/A
<b>GEOMETRIC ACCURACY</b>	N/A
<b>RADIOMETRIC RESOLUTION</b>	N/A
<b>RADIOMETRIC ACCURACY</b>	N/A
<b>AUXILIARY DATA</b>	Orbit State Vectors; SBT/UTC time conversion parameters; SQ ADS (extracted from Level 1B product); Grid pixel lat/long ADS (extracted from Level 1B product).
<b>ALGORITHMS USED</b>	sub-sample the Level 1B product; choose best three bands for viewing;
<b>NOTES</b>	The browse is produced from the Level 1B product for all data acquired
