

Atmosphere Cal/Val

PREDE~POM:
the Skynet
contribution

M. Campanelli (ISAC -CNR)

International SKYNET DataCenter

some of them co-located with AERONET and PMOD/WMO.

more than 100 sites worldwide located

The moon-network status

Model	Location	Operation time	PI
POM02	Rome - downtown, IT	Since May 2022	Sapienza University
POM01	Rome - Tor-Vergata, IT	Since August 2023	ISAC-CNR
POM02	Baltic sea coast-Zingst, GE	Not yet available	DWD
POM01	Campaigns: Rome, IT Davos, SW Izana, SP	September 2021 October 2021 September 2022	ISAC-CNR
POM02	Valencia, SP	Planned 2024	Univ. Valencia
POM02	Aosta, IT	Planned	ARPA-VDA
10 POM02	Italian Air Force	Planned	Italian Air Force sites
POM01	by PREDE for update	/	ISAC-CNR

Nocturnal aerosol optical depth measurements with modified sky radiometer POM-02 using the moon as a light source

Akihiro Uchiyama¹, Masataka Shiobara², Hiroshi Kobayashi³, Tsuneo Matsunaga¹, Akihiro Yamazaki⁴, Kazunori Inei⁵, Kazuhiro Kawai⁵, and Yoshiaki Watanabe⁵

- Modification of the POM Sun model => change of amplification and position sensor
- After Amplification: good measure at 340 and 380 nm, difficult at 1225, 1627 and 2200 nm
- 4 quadrants photodiode for MPA [$+90^\circ, -90^\circ$]; then by software (Nagasawa 1981) up to 120° => good comparison with SPICE ($<0.01^\circ$ in zen; $<0.04^\circ$ in Az)
- Reflectance from ROLO is considered, not transformed in Irradiance
- Reflectance at wls of POMs are obtained by linear interpolation of the 2 closest ROLO wl (extrapolation for 340 nm)

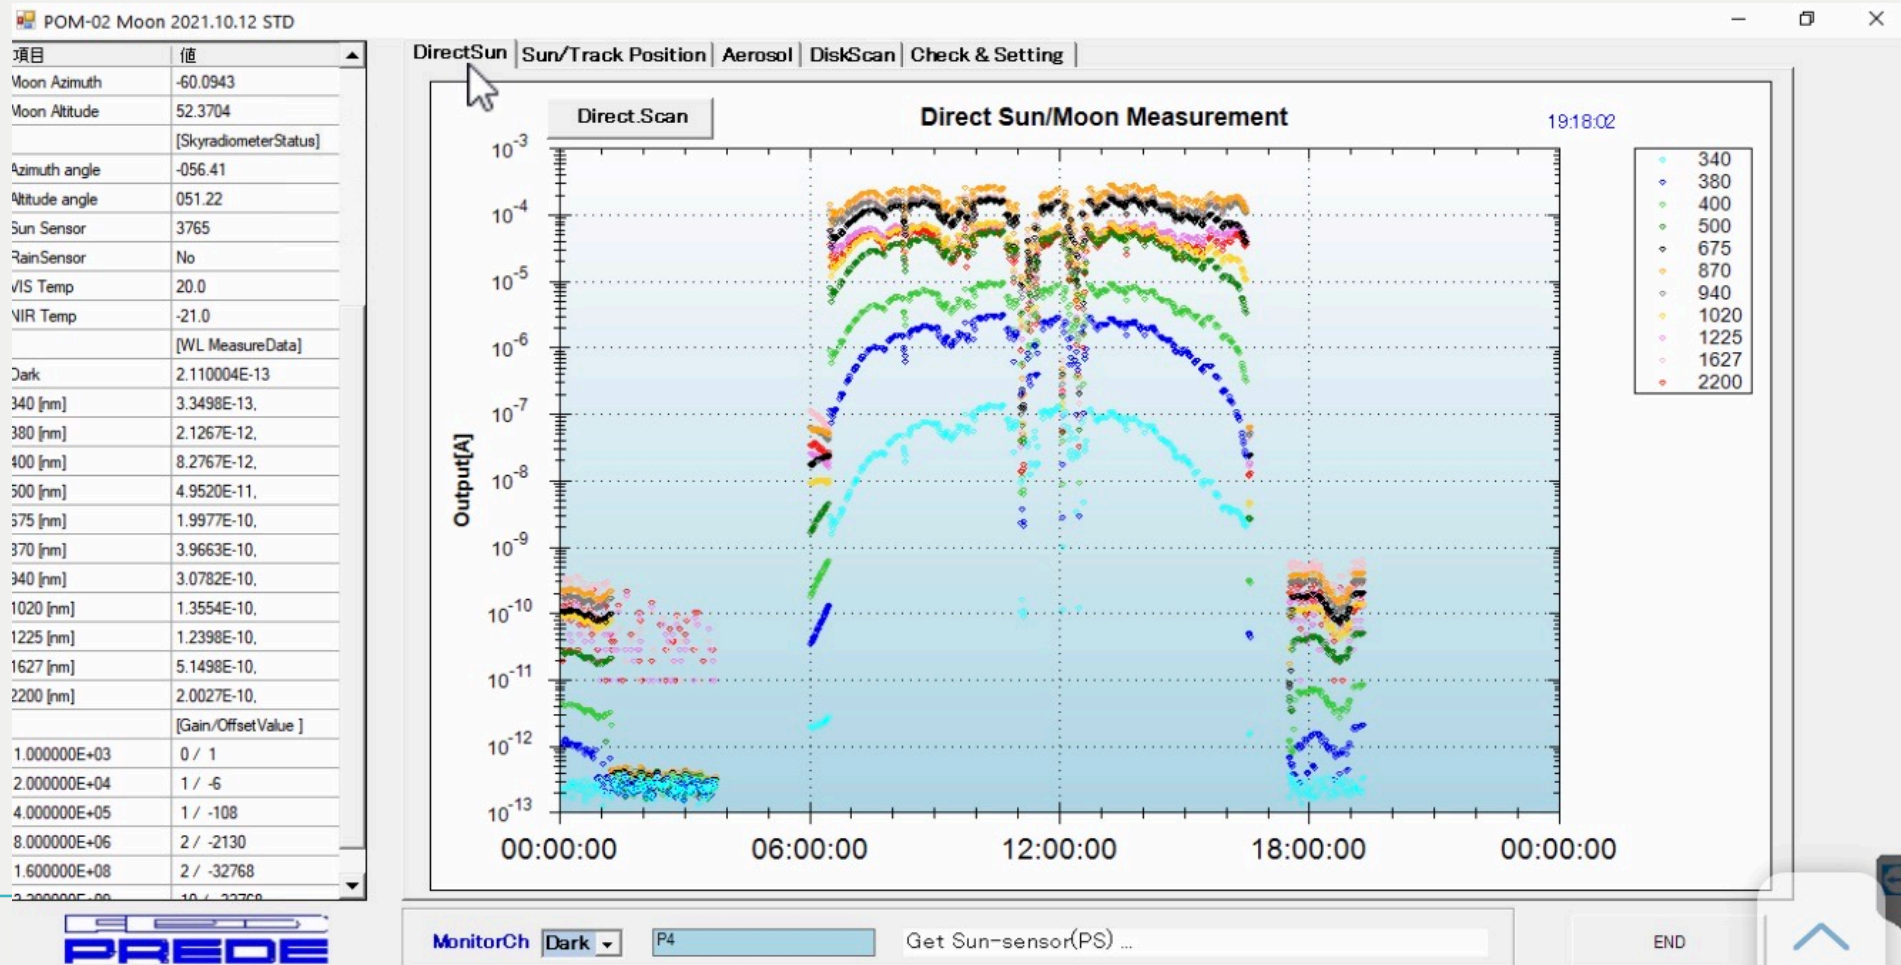

Type of measurements: **Direct Sun**, **Direct Moon**, **Almucantar** and **Principal plane Sun**, **Almucantar Moon**

The measurement of scattered light around the moon is controlled by Prede software

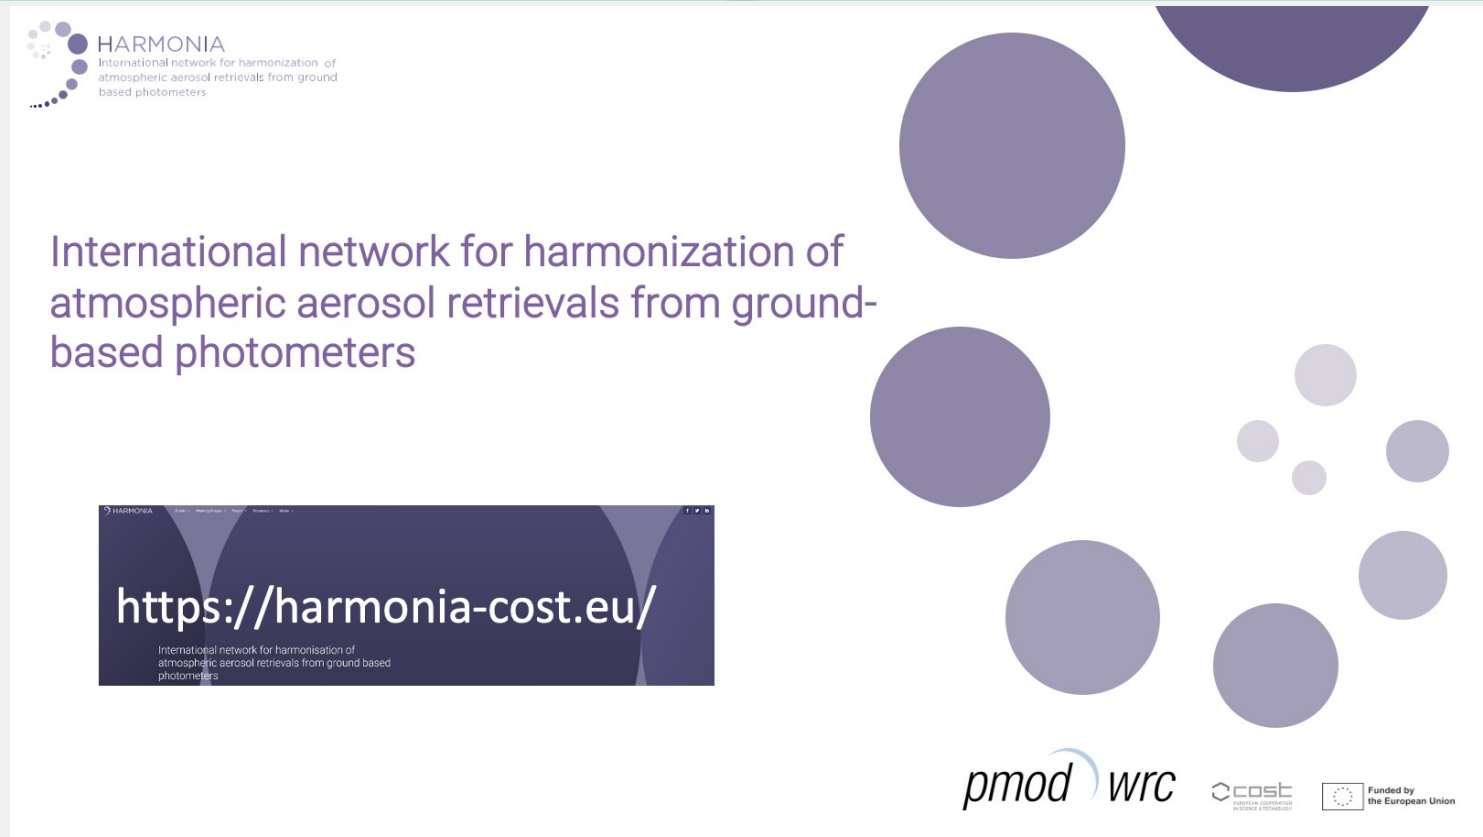

The maximum scattering angle is user definable : default maximum value = 30° .

Personal communication of Dr. Uchiyama: data up to 5° can be used to remove the scattered light affecting the direct measurement and it may be used to determine the presence or absence of clouds

NOT YET USED

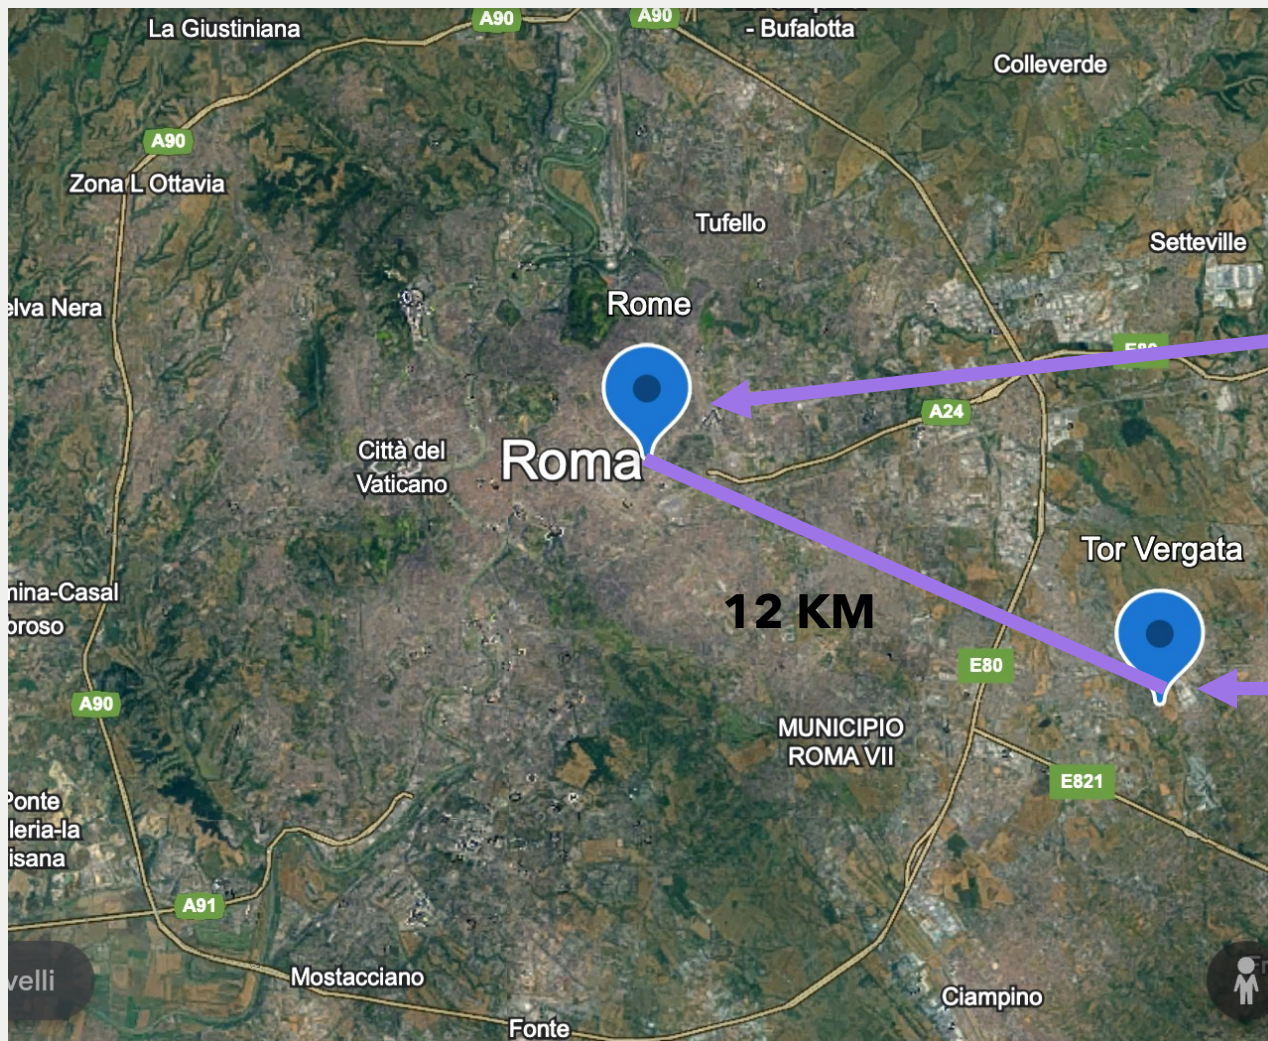

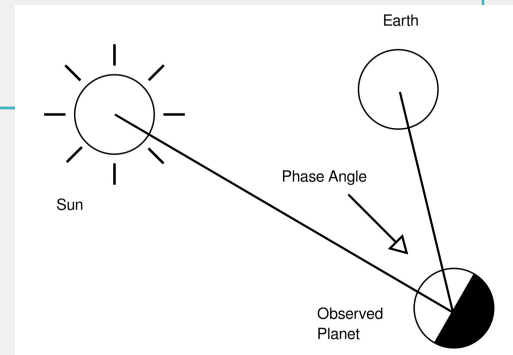

RESULTS from the SKYNET network

The image shows a slide for the HARMONIA project. At the top left is the HARMONIA logo, which consists of a cluster of dots of varying sizes and colors (purple, blue, green) arranged in a semi-circle. To the right of the logo, the text reads: "HARMONIA International network for harmonization of atmospheric aerosol retrievals from ground based photometers". Below this, the full name of the project is repeated: "International network for harmonization of atmospheric aerosol retrievals from ground-based photometers". In the center, there is a screenshot of the project's website, which displays the URL "https://harmonia-cost.eu/" in large white text on a dark blue background. Below the URL, the same project name is written in smaller white text. At the bottom right of the slide, there are three logos: "pmod wrc" in a stylized font, the "cost" logo (Cooperation in Science and Technology), and the "Funded by the European Union" logo with the European Union flag.

STSM of **Gaurav Kumar**, PhD student by University of Valencia to CNR, Italy- 2023 and 2024. Implementation of a method for retrieving lunar AOD in different European Skynet Radiometers (ESR) network sites; Near Real-time comparison of nighttime aerosol optical depth (AOD) from Skynet and AERONET systems.

AOD obtained for moon phases greater than 65%

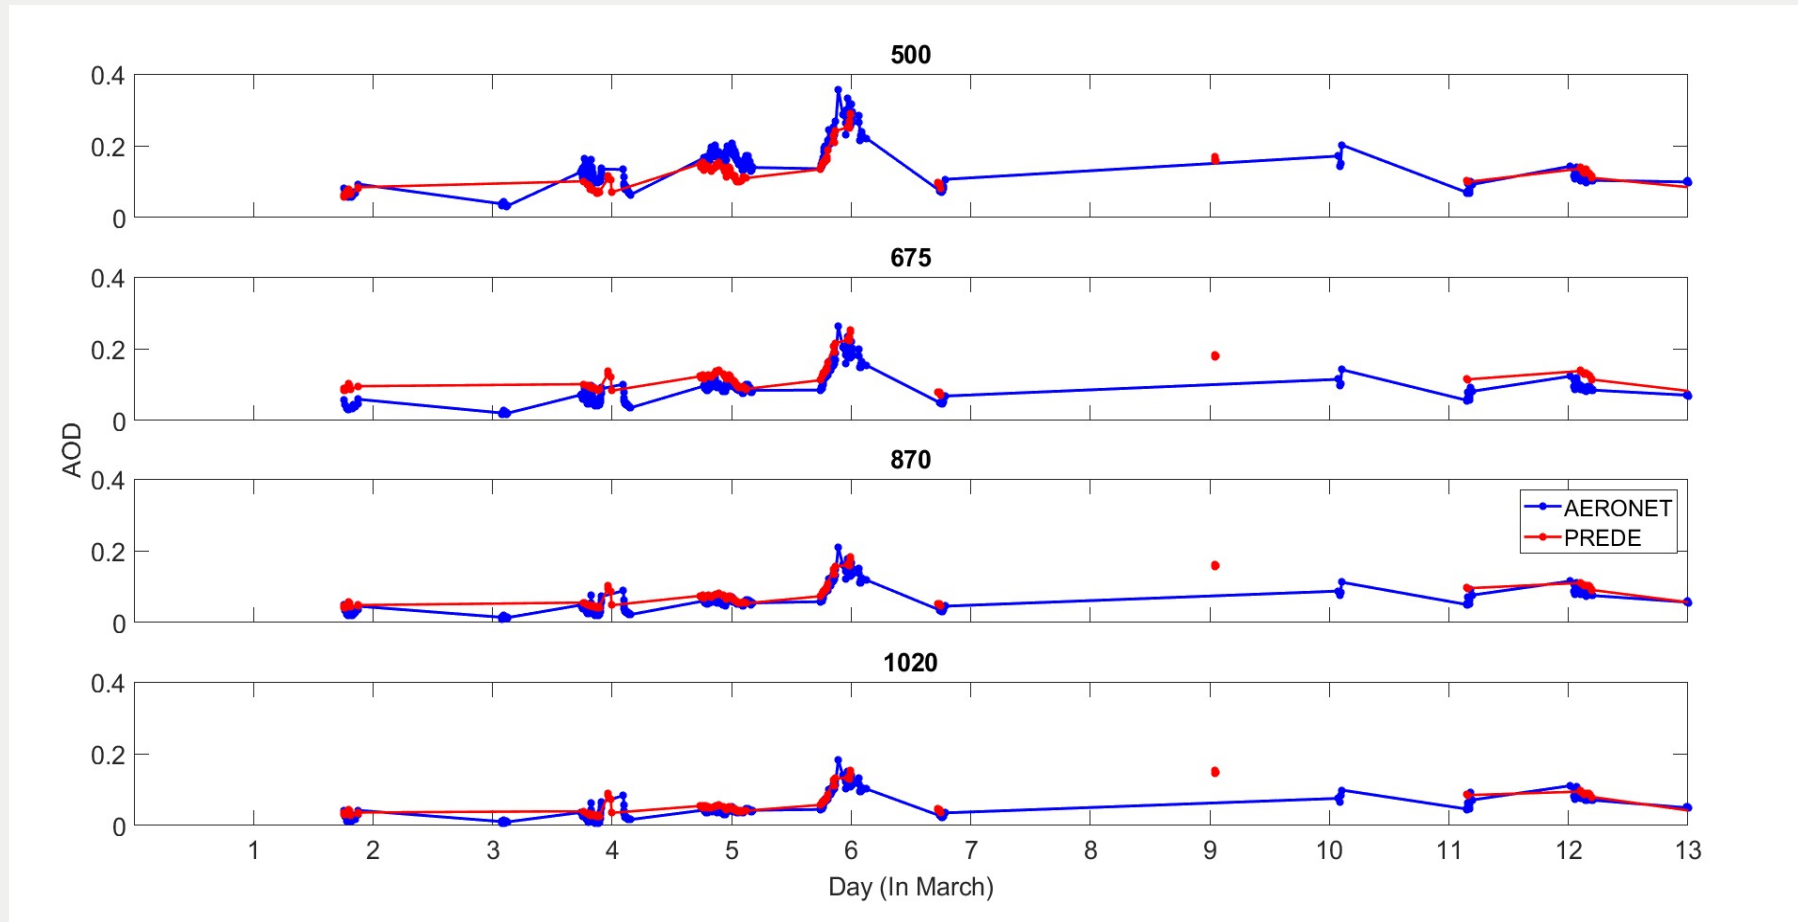

SKYNET - LUNAR POM
AERONET - LUNAR CIMEL
only for QUATRAM
campaign

AERONET - LUNAR CIMEL
F.Barnaba PI

Results

- Preliminary result of comparison of cloud-screened AOD retrieved using Moonrad at the University of Sapienza, Italy and AERONET at Tor Vergata in 2023

2. Study area

Rome, Italy

- Rome metropolitan area
- 41.902°N, 12.516°W
- Altitude 83 m
- Coast located 32 km West
- Urban pollution with marine effect
- Occasional biomass burning effect

Izaña, Spain

- Located in El Teide national park
- 39.92°N, 1.13°W
- Altitude 2300 m
- Pristine environment
- Near dust source region (Sahara).

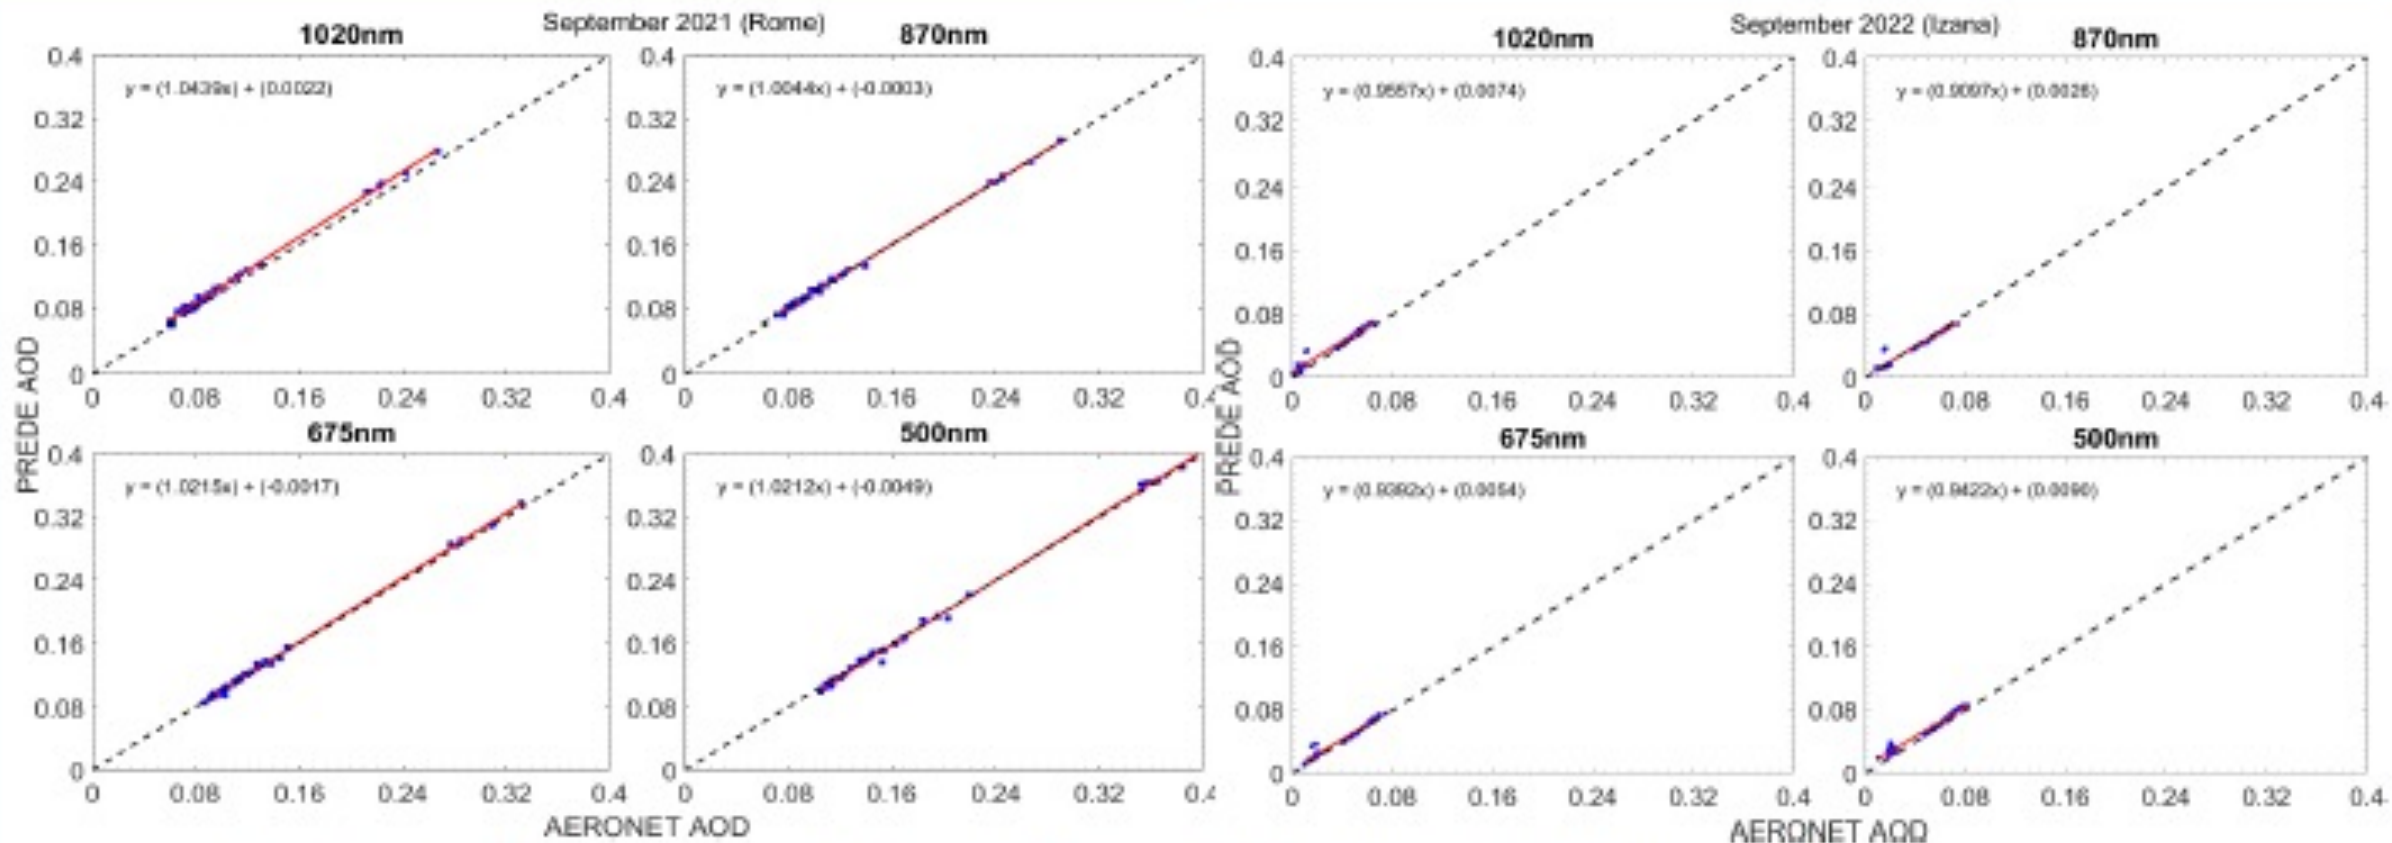

Fig. 2. Scatter plot between AOD from PREDE and AERONET at a) ROME b) Izaña

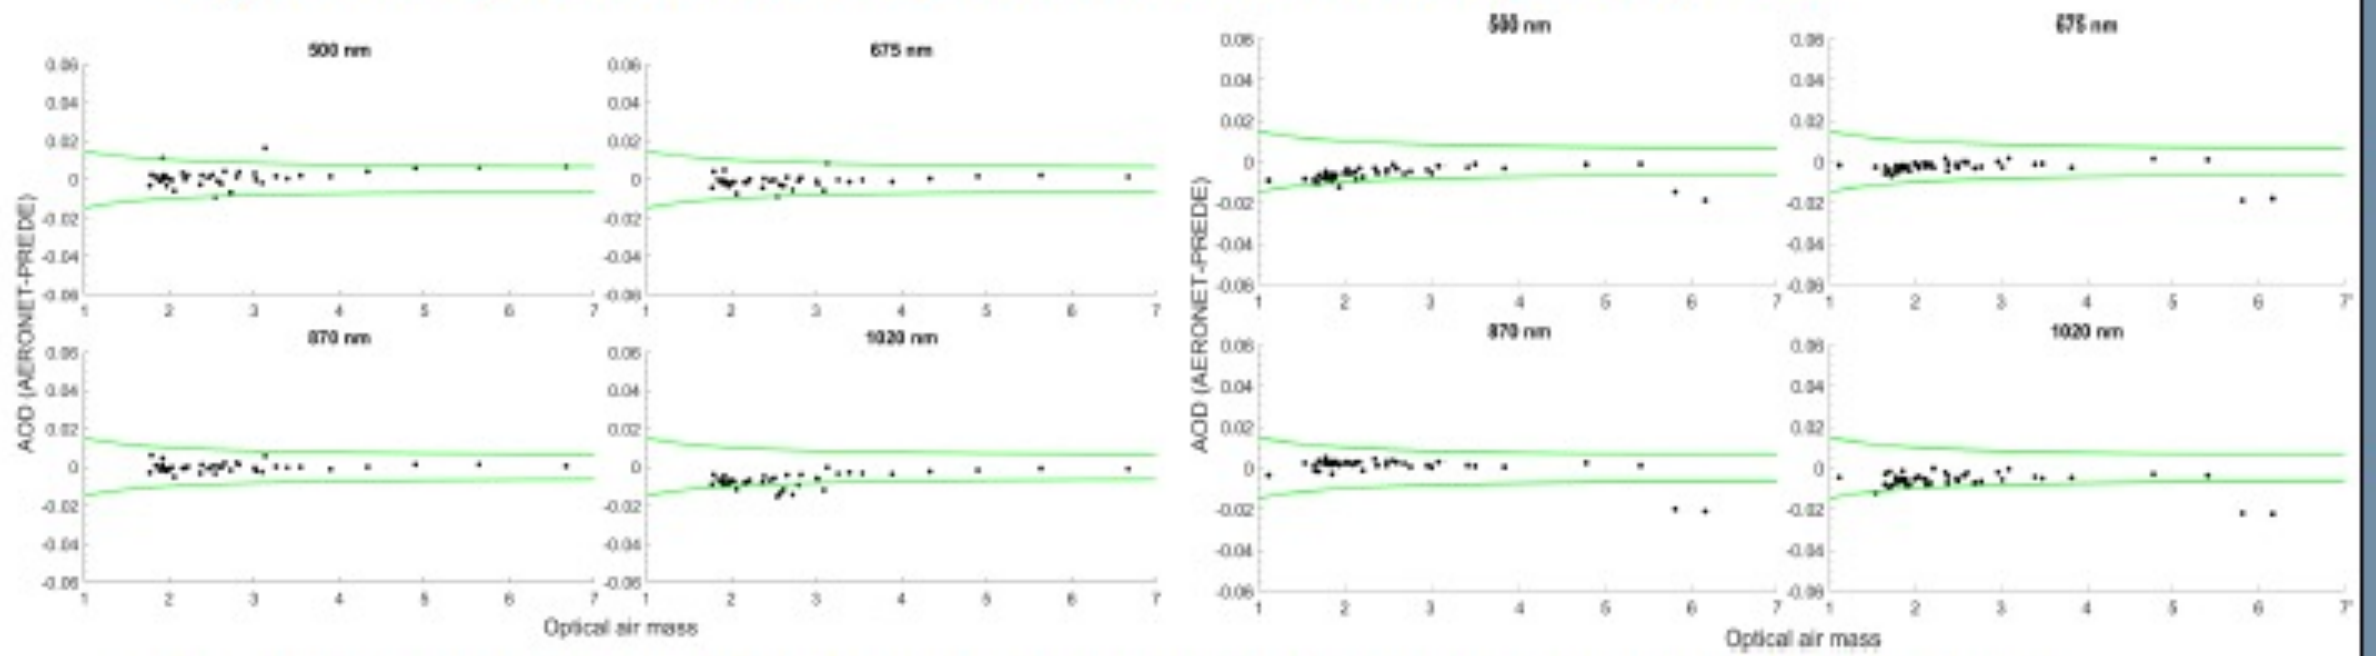

Fig. 3. Scatter plot showing the points within the WMO limits (green line) at a) ROME b) Izaña

Results

- Scatter plot between AERONET and SKYNET (PREDE) at Tor Vergata. The green lines show the WMO limits.

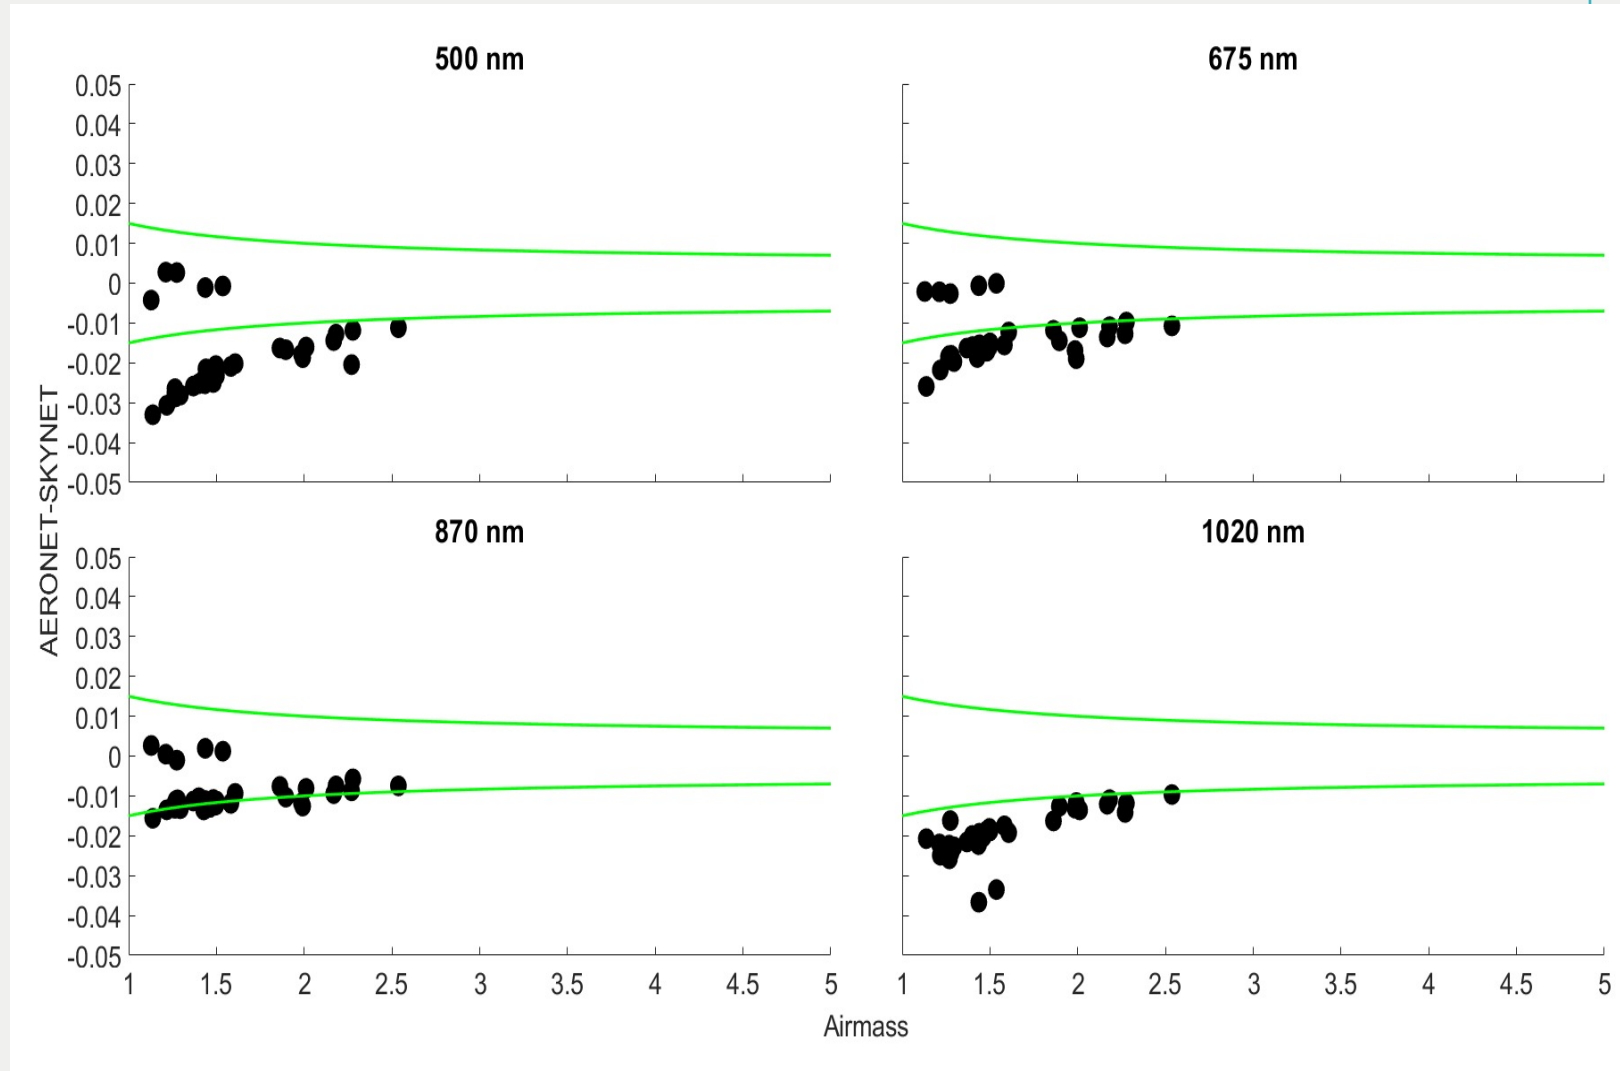

Fig 2

Results

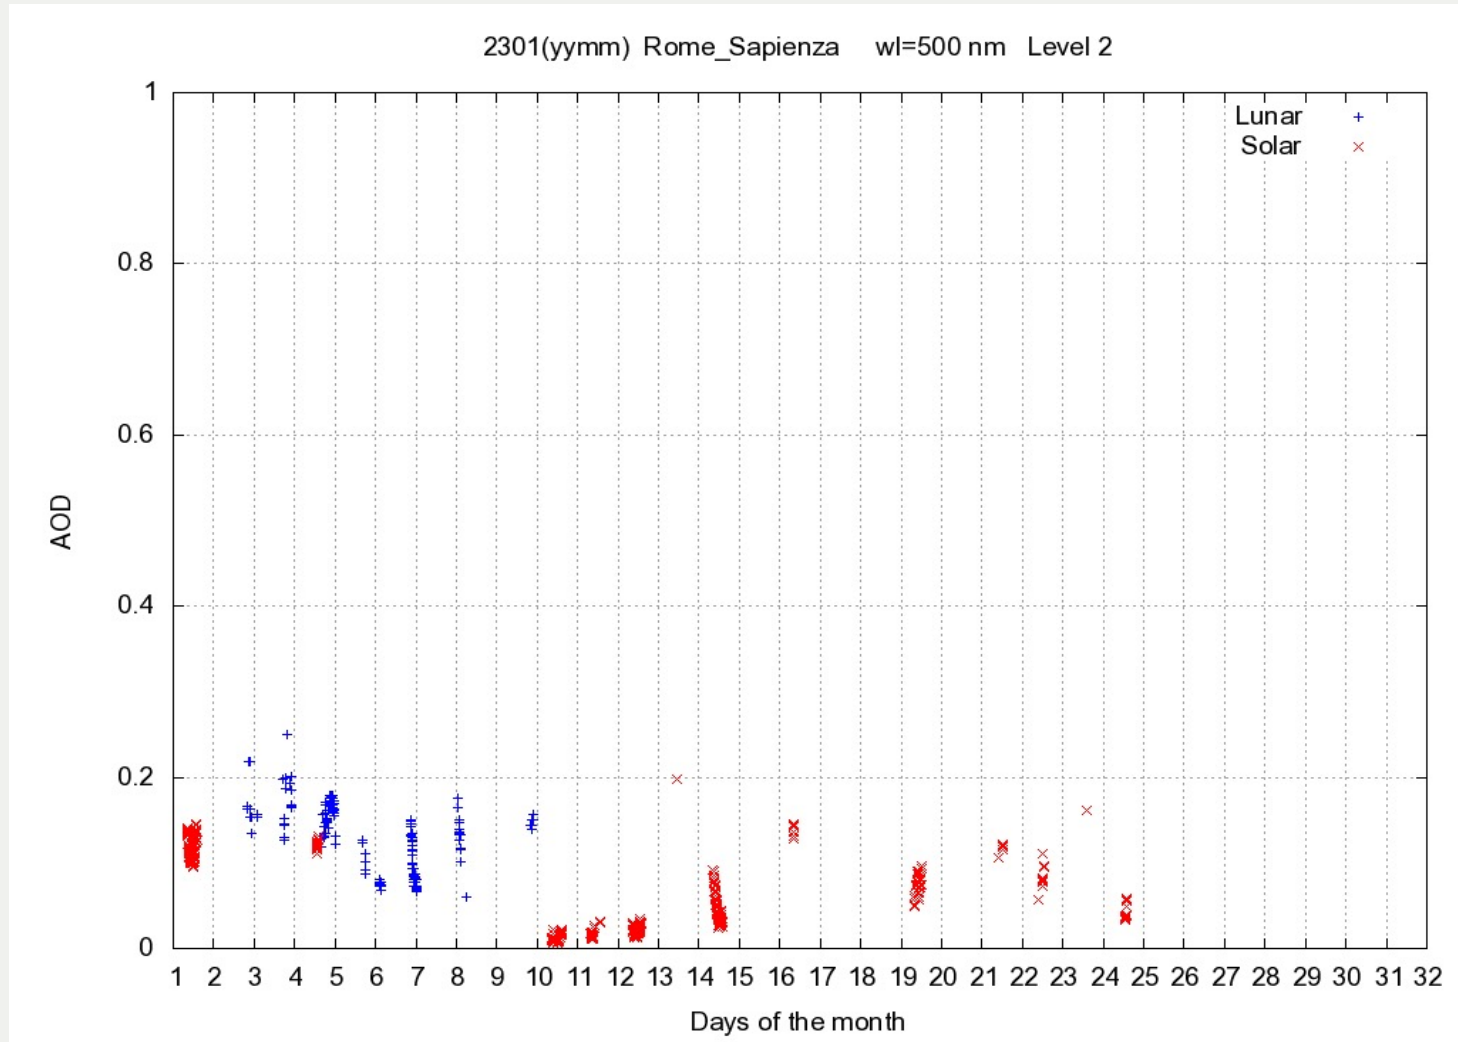

Fig 3

To do in the future

- Improvement of cloud screening algorithm: abnormal values of AOD observed; still using the same cloud screening for sun measurements
- Implementation of the algorithm in more sites.
- Validate and improve the calibration coefficients mentioned in Uchiyama et al 2019.
- Make AOD downloadable from Europe Skynet web page.
- Understand 340 and 380 nm night-time AOD
- Precipitable Water Vapour retrieval
