# Approach to ALTIUS Ozone Profile Validation

Jean-Christopher Lambert, Daan Hubert, Steven Compernelle, Quentin Errera, José Granville, Tijn Verhoelst, Bjorn Frommknecht, Rob Koopman, Daniel Navarro-Reyes, and Claus Zehner

# Approach to ALTIUS Ozone Profile Validation

1. ALTIUS mission requirements
2. Validation means
3. Heritage systems
4. Phase E1 planning

## Mission and User Requirements

- ALTIUS Mission Requirement Document (MRD)
- Earth Watch mission → user-oriented operational solution
- OPEROZ report
- GCOS Implementation Plan
- CEOS AC-VC interoperability requirements
- Other sources identified

Mission requirement (target / threshold)	Near-real-time (ALT-MRD-PRI-010)	Ozone climatologies (ALT-MRD-PRI-020)	Ozone hole (ALT-MRD-PRI-010)
Altitude range [km]	15-45	20-45	15-45
Vertical resolution [km]*	0.5 / 1	0.5 / 1	1 / 2
Across-track resolution [km]	50 / 100	50 / 100	20 / 100
Along-track sampling [km]	200	200	N.A.
Geographical coverage	global	global	polar
Uncertainty [ppbv]	50 / 100	50 / 100	50 / 100
Uncertainty [%]	5 / 20	3 / 10	10 / 30
Data latency	< 3 hours	4 weeks	4 weeks

Mission requirement (target values)	Mesospheric ozone (ALT-MRD-SEC-010)	3-D tomographic ozone fields (ALT-MRD-SEC-120)
Altitude range [km]	45-100	15-45
Vertical resolution [km]*	1	1
Across-track resolution [km]	50	2
Along-track sampling [km]	200	200
Uncertainty [%]	10	5

\* Resolution requirements are currently under discussion.

Requirement	Middle and lower stratosphere	Upper stratosphere and mesosphere
Frequency	4 hours	daily
Vertical resolution [km]	2	3
Horizontal resolution [km]	200	200
Measurement uncertainty [%]	10	5-20%
Stability per decade [%]	2	2

## Specific Level-2 validation targets

- Validation of geophysical quantity value with production of diagnostic (ex-post) uncertainty estimates
- Validation of prognostic (ex-ante) uncertainty estimates
- Dependence on influence quantities
- Analysis of retrieval diagnostics
- Verification of data Quality Flags

Variable	ALTIUS mode			Range	Rationale
	BL	SO	ST		
Ozone density:					
15-20 km (UTLS)	X	X	X	1-3 10 <sup>12</sup> molec.cm <sup>-3</sup>	Measurand
20-35 km (MS)	X	X	X	2-7 10 <sup>12</sup> molec.cm <sup>-3</sup>	
35-45 km (US)	X	X	X	0.1-1.5 10 <sup>12</sup> molec.cm <sup>-3</sup>	
<b>Influence quantity</b>	<b>BL</b>	<b>SO</b>	<b>ST</b>	<b>Range</b>	<b>Rationale</b>
Temperature	X	X	X	0-50 km profile 180 K (O <sub>3</sub> hole) to 290 K	Major influence quantity, unit conversion
Pressure	X	X	X	0-50 km	Scattering, altitude registration, unit conversion
Cloud top height	X	X	X		Boundary, upwelling radiation
Cloud top albedo	X	X	X		Upwelling radiation
Aerosol height	X	X	X		Boundary, upwelling radiation
Surface albedo	X	X	X	0.05 (ocean) to 0.95 (ice)	Upwelling radiation
Star temperature			X	2300 K to 7000 K (cool) 7000 K to 46,000 K (hot)	Signal-to-noise ratio
Star magnitude			X	-2 (strong) to +4 (weak)	Signal-to-noise ratio
Solar zenith angle	X	X	X	0° - 90° 90° - 108° 108° - 180°	Identifies radiation source, controls radiative transfer
LOS azimuth angle			X	-10° to 10° (back) +10° to +45° (slant) +45° to +90° (side)	Identifies radiation source, controls radiative transfer, determines profile geometry
Obliquity, beta angle		X	X		Determines sensing conditions and resolution
Occultation type		X	X	Rise, set at spacecraft Rise, set at tangent point	Diurnal cycle
<b>Diagnostics</b>	<b>BL</b>	<b>SO</b>	<b>ST</b>	<b>Range</b>	<b>Rationale</b>
Quality flags	X	X	X	For each level and profile	Removal of outliers
Vertical averaging kernel matrix (AK)	X	X	X	Ideally for each retrieval; or at minimum 1 representative matrix per observation mode, latitude zone, month...	Required for information content studies, DFS, vertical resolution, altitude registration...
Error covariance matrix (ECM) or error profile	X	X	X	Ideally for each retrieval; or at minimum 1 representative matrix per observation mode, latitude zone, month...	Significance of (dis)agreement with correlative measurements, validation of reported errors
Chi-square, RMS	X	X	X	With every ozone value / retrieval	Quality indicator for retrieval

# ALTIUS Validation Approach

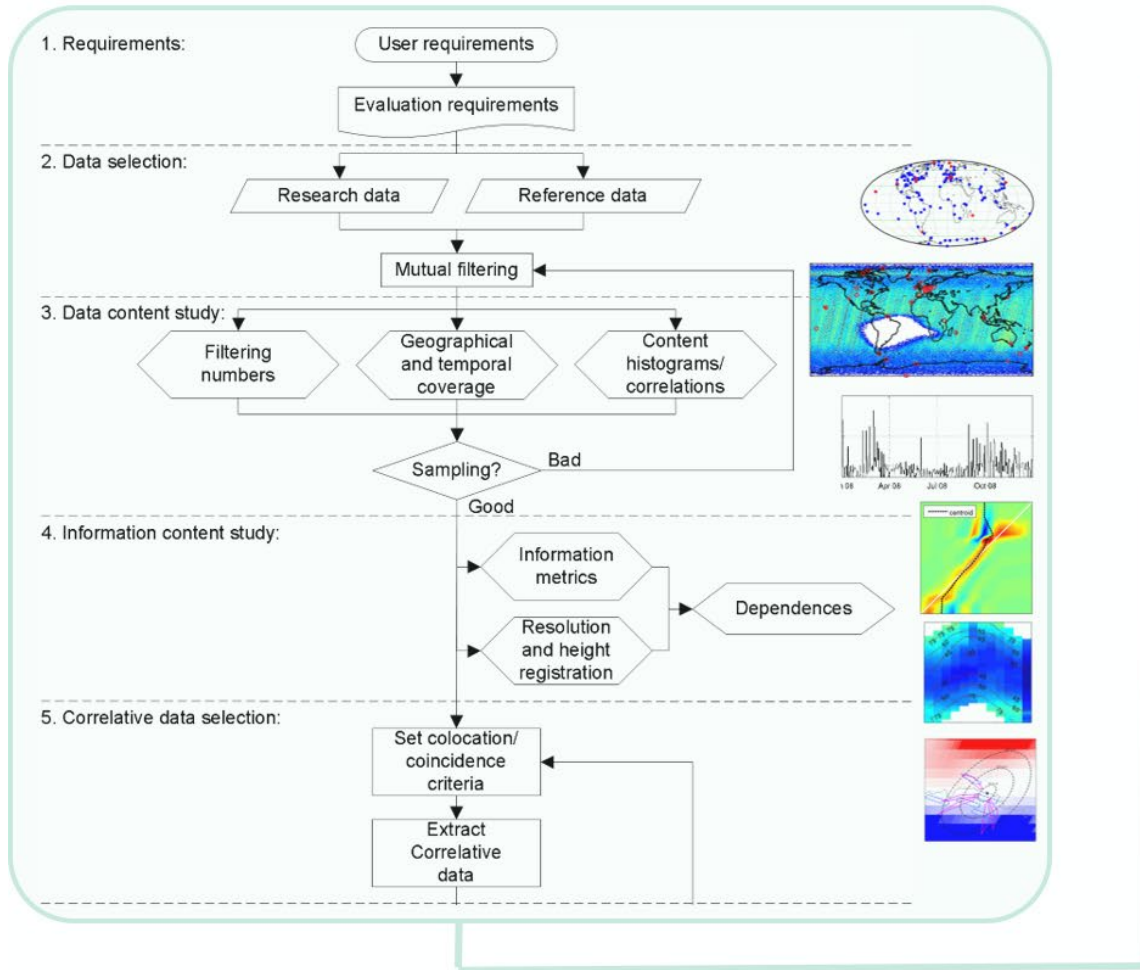

## 45 requirements

- Standards
- Cardinal validation targets
- Mission and user requirements
- Data content and documentation
- Validation approaches
- Data analysis
- Planning and organization
- Tools and services

Identifier	ALTIUS validation requirement by category	Sections
<b>STANDARDS AND TRACEABILITY</b>		
ALT-CV-REQ-001	ALTIUS Cal/Val activities shall adhere to the general EO data quality strategy established in the QA4EO framework.	4.1
ALT-CV-REQ-002	Traceable Quality Indicators shall be produced to enable users to evaluate readily the fitness-for-purpose of the ALTIUS data.	4.1
ALT-CV-REQ-003	ALTIUS Cal/Val activities shall adopt standards and best practices for terminology.	4.1, 2.3, 2.4
ALT-CV-REQ-004	ALTIUS Cal/Val activities based on data comparisons shall adopt a community endorsed process of generic validation operations.	4.4
ALT-CV-REQ-005	Maturity of the ALTIUS Cal/Val shall be assessed at minimum against the CEOS WGISS Data Management and Stewardship Maturity Matrix for satellite data validation.	4.5
ALT-CV-REQ-006	Traceability of the ALTIUS validation process, methods, tools and data shall be documented.	4.1
ALT-CV-REQ-007	Validation reporting shall include traceability information on the ALTIUS data product, the validation processing, and the validation team(s) issuing the report.	4.1
<b>CARDINAL VALIDATION TARGETS</b>		
ALT-CV-REQ-008	Quality indicators shall be established for Level-2 geophysical quantities (vertical profile of ozone concentration).	4.1, 4.2, 4.3.8, 5.1
ALT-CV-REQ-009	Validity of the ancillary and auxiliary parameters used by the Level-1-to-2 data processors shall be verified.	4.2, 5.1
ALT-CV-REQ-010	Theoretical ex-ante uncertainties associated with the Level-1b and Level-2 data products shall be given quantitative evidence of their validity.	4.2, 4.3.8, 5.1
ALT-CV-REQ-011	Quality flags and of data usage recommendations associated with the data products shall be given evidence of their validity and efficiency.	4.2, 5.1
ALT-CV-REQ-012	Compliance of actual quality of the data product shall be evaluated with respect to mission requirements and core user requirements.	4.2, 5.1
ALT-CV-REQ-013	Compliance of actual quality of the data product shall be evaluated with respect to product specifications.	4.2, 5.1
<b>MISSION AND USER REQUIREMENTS</b>		
ALT-CV-REQ-014	Cal/Val activities shall establish quality indicators enabling to judge the fitness-for-purpose of the ALTIUS data quality comply with product specifications and mission requirements.	3.2, 3.3

# Generic Ozone Profile Validation Protocol

(provides Quality Indicators, includes round-robin function)

Keppens et al., AMT 2015

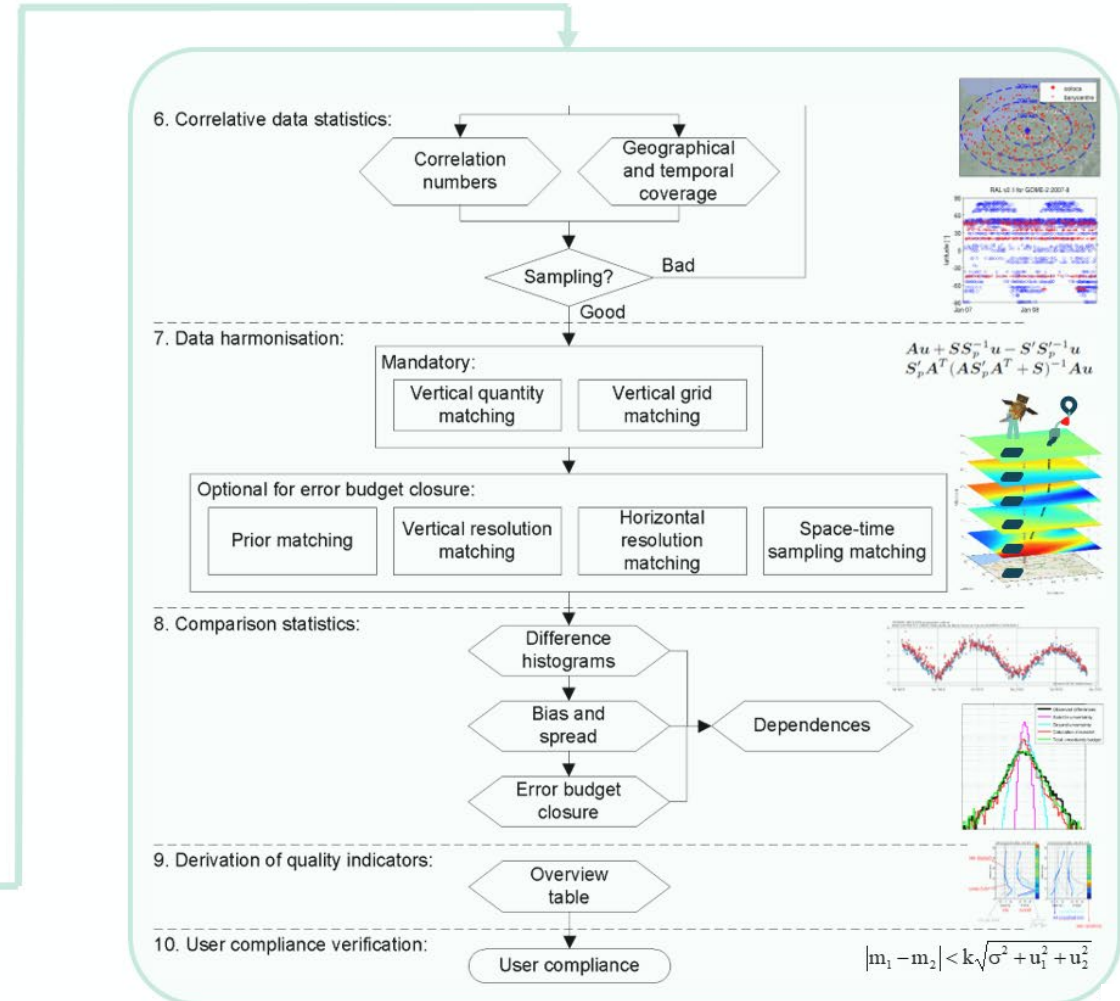

Table 9 – Ground-based capabilities envisaged for ALTIUS Level-2 ozone profile validation during Phase E1.

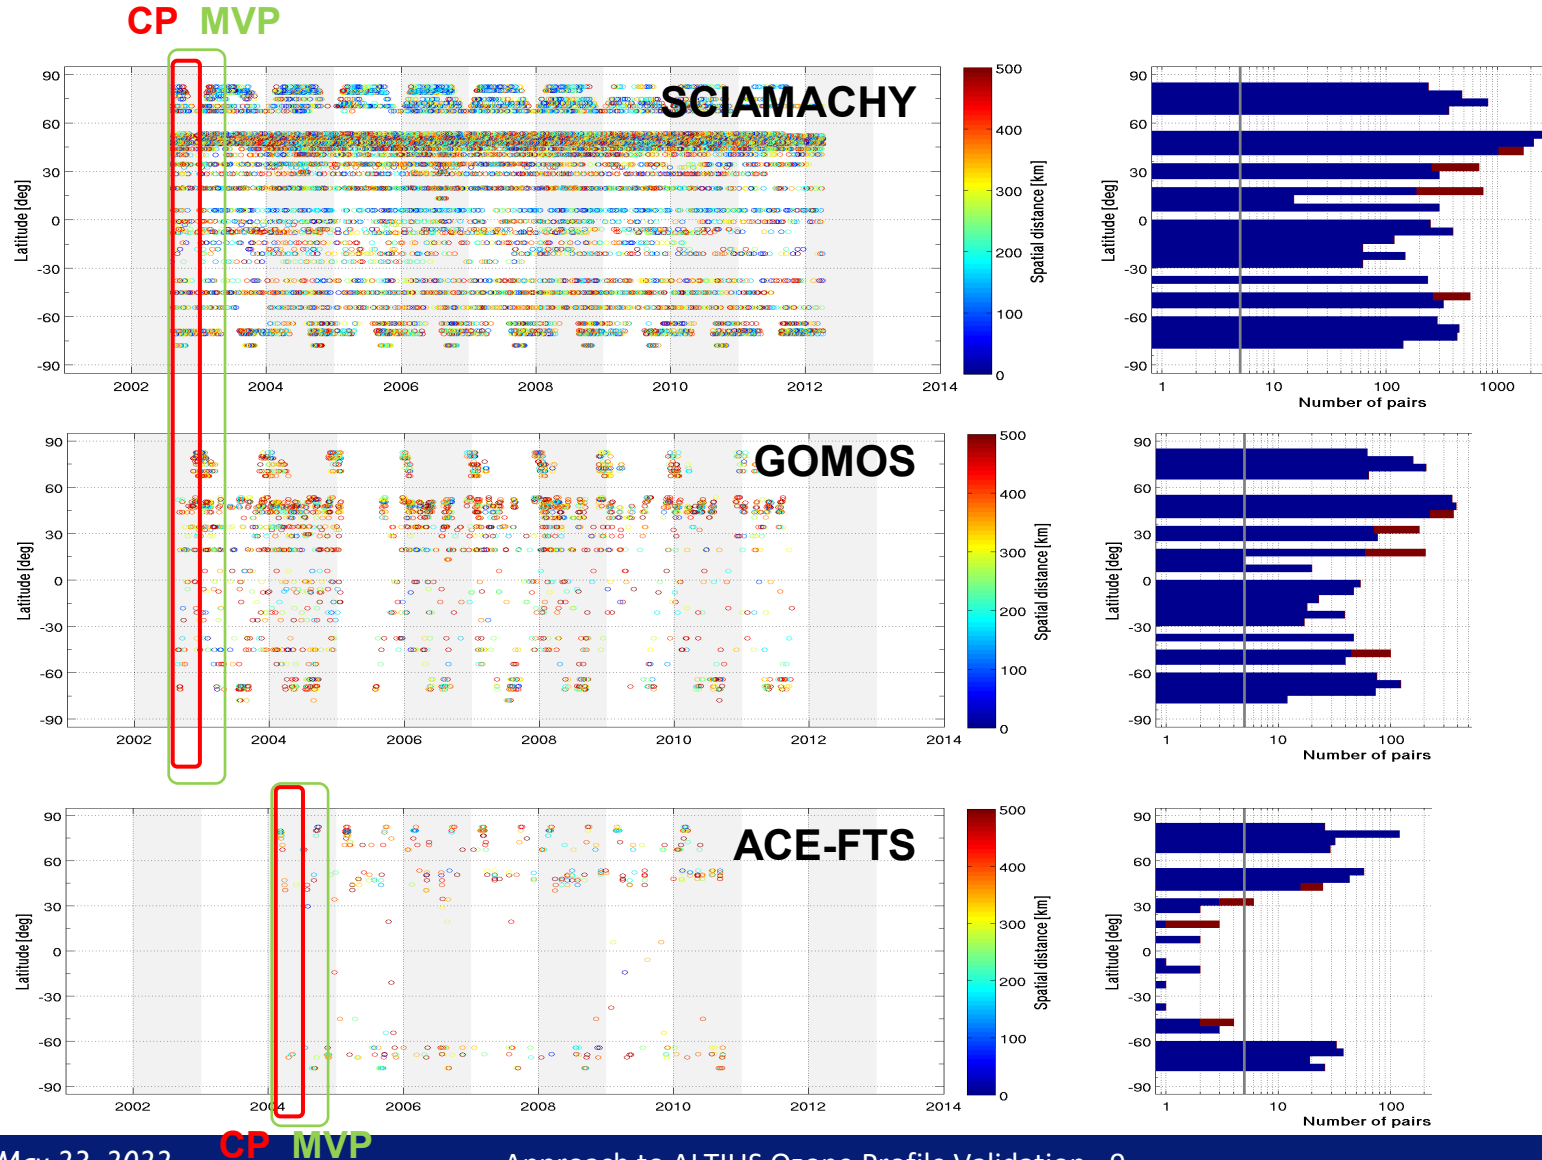

Instrument	Altitude / vert. resolution	Local time	Uncertainty	Comments / Priority
Balloon-borne electrochemical ozonesonde	ground → 30 km / 150 m	mostly daytime, all weather	5%	Best vertical resolution, worldwide coverage / first priority
Differential Absorption Lidar (DIAL)	15 → 50 km / 0.5 km @ 15 km 7 km @ 50 km	night-time, clear weather	2% @ 15-35 km 5-20% @ 35-50 km	Good vertical resolution and stratospheric range, limited geographical coverage, clear weather night-time only / first priority
Millimetre Wave Radiometer (MWR)	20 → 65 km / 8 km @ 20-40 km 19 km @ 60 km	day and night, all weather	6-9% @ 20-54 km 11% @ 64 km	Low vertical resolution and poor geographical coverage, but very dense day-and-night coverage, demonstrated for trend studies / mid-term priority, high priority for mesospheric ozone

# Comparisons to ground-based monitoring networks

# Cross-validation with other satellites

Comparison with Limb, Solar occultation and Nadir sounders

- Several approaches, including comparisons of pairs, of zonal means, and using ground-based network data as a transfer standard
- Detection of features not accessible from the ground and by point-like FRMs
- Compliance with CEOS interoperability requirements
- Cross-validation with alternative ALTIUS L2 retrievals

	SOUNDER	MISSION	2000s	2010s	2020s	2030s
Occ	ACE FTS	SCISAT-1	[Red bar]			
	ACE MAESTRO	SCISAT-1	[Blue bar]			
	SAGE III	ISS	[Blue bar]			
	AIUS	Gaofen-5	[Red bar]			
Limb	SMR	Odin	[Green bar]			
	OSIRIS	Odin	[Blue bar]			
	SABER	TIMED	[Red bar]			
	MLS	EOS Aura	[Green bar]			
	OMPS Limb	Suomi-NPP	[Purple bar]			
	SAGE III	ISS	[Blue bar]			
	ALTIUS	ESA EWP	[Blue bar]			
	OMPS Limb	JPSS-2	[Purple bar]			

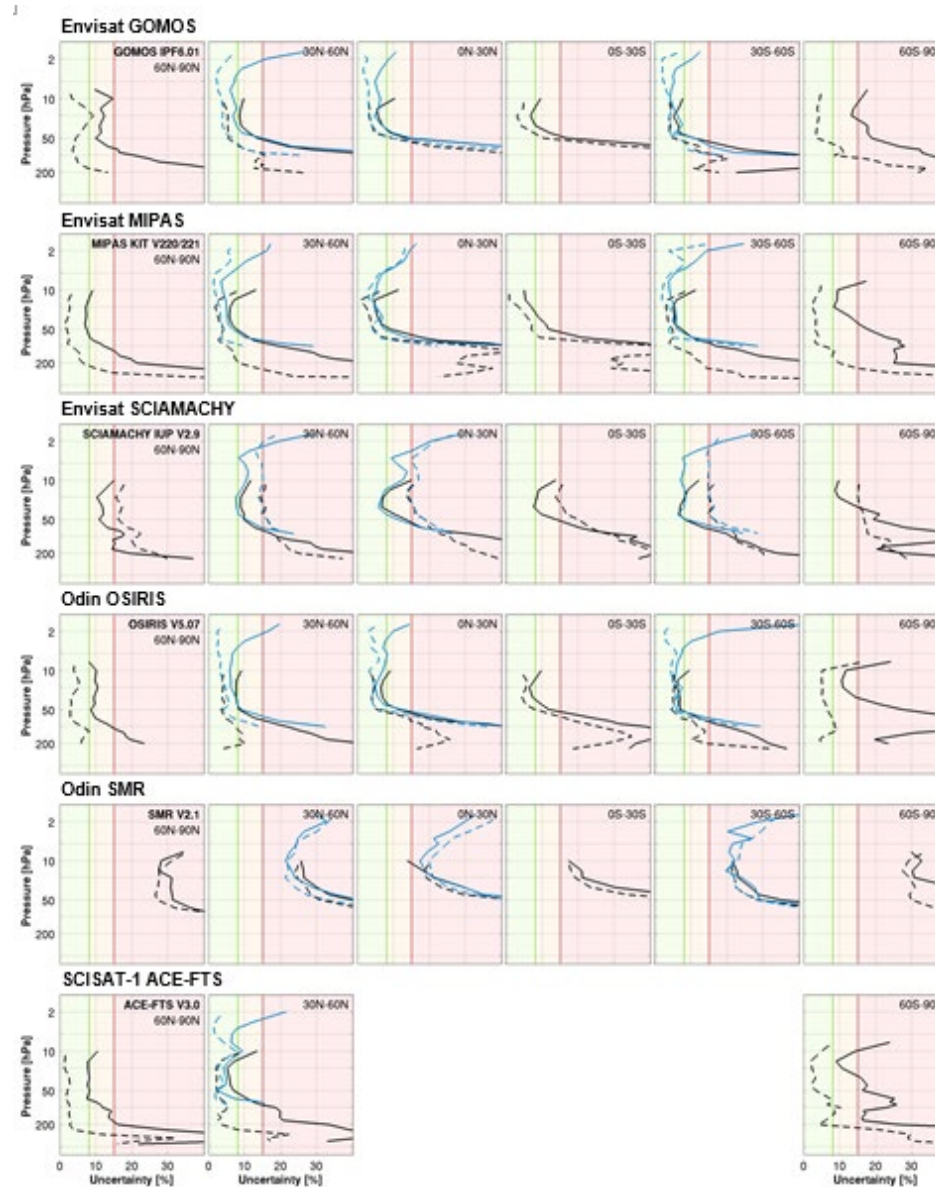

Spectral range: UV/VIS (Purple), UV to NIR (Blue), VIS/IR (Dark Blue), IR (Red), MW (Green)

# Cross-validation with other satellites

- Compliance with GCOS & Ozone\_cci+ CRG requirements
- Compliance with CEOS interoperability requirements

# Analysis of information content and other diagnostics

Combination of data comparisons and of information content analysis

Example: Sentinel-5p TROPOMI ozone profile validation:

- DFS ~ 6 pieces of independent information
- Sensitivity ~0.5 at surface, ~1.5 peak in UTLS
- Vertical resolution ~10-15 km, 7 km @ 35 km
- Altitude registration ~-10 km offset (towards surface) in troposphere, max. +2 km offset in middle stratosphere
- Increased sensitivity and better resolution at high SZA
- Data outliers over high surface albedo

Courtesy A. Keppens *et al.* (BIRA-IASB, S5P MPC)

# Modelling support

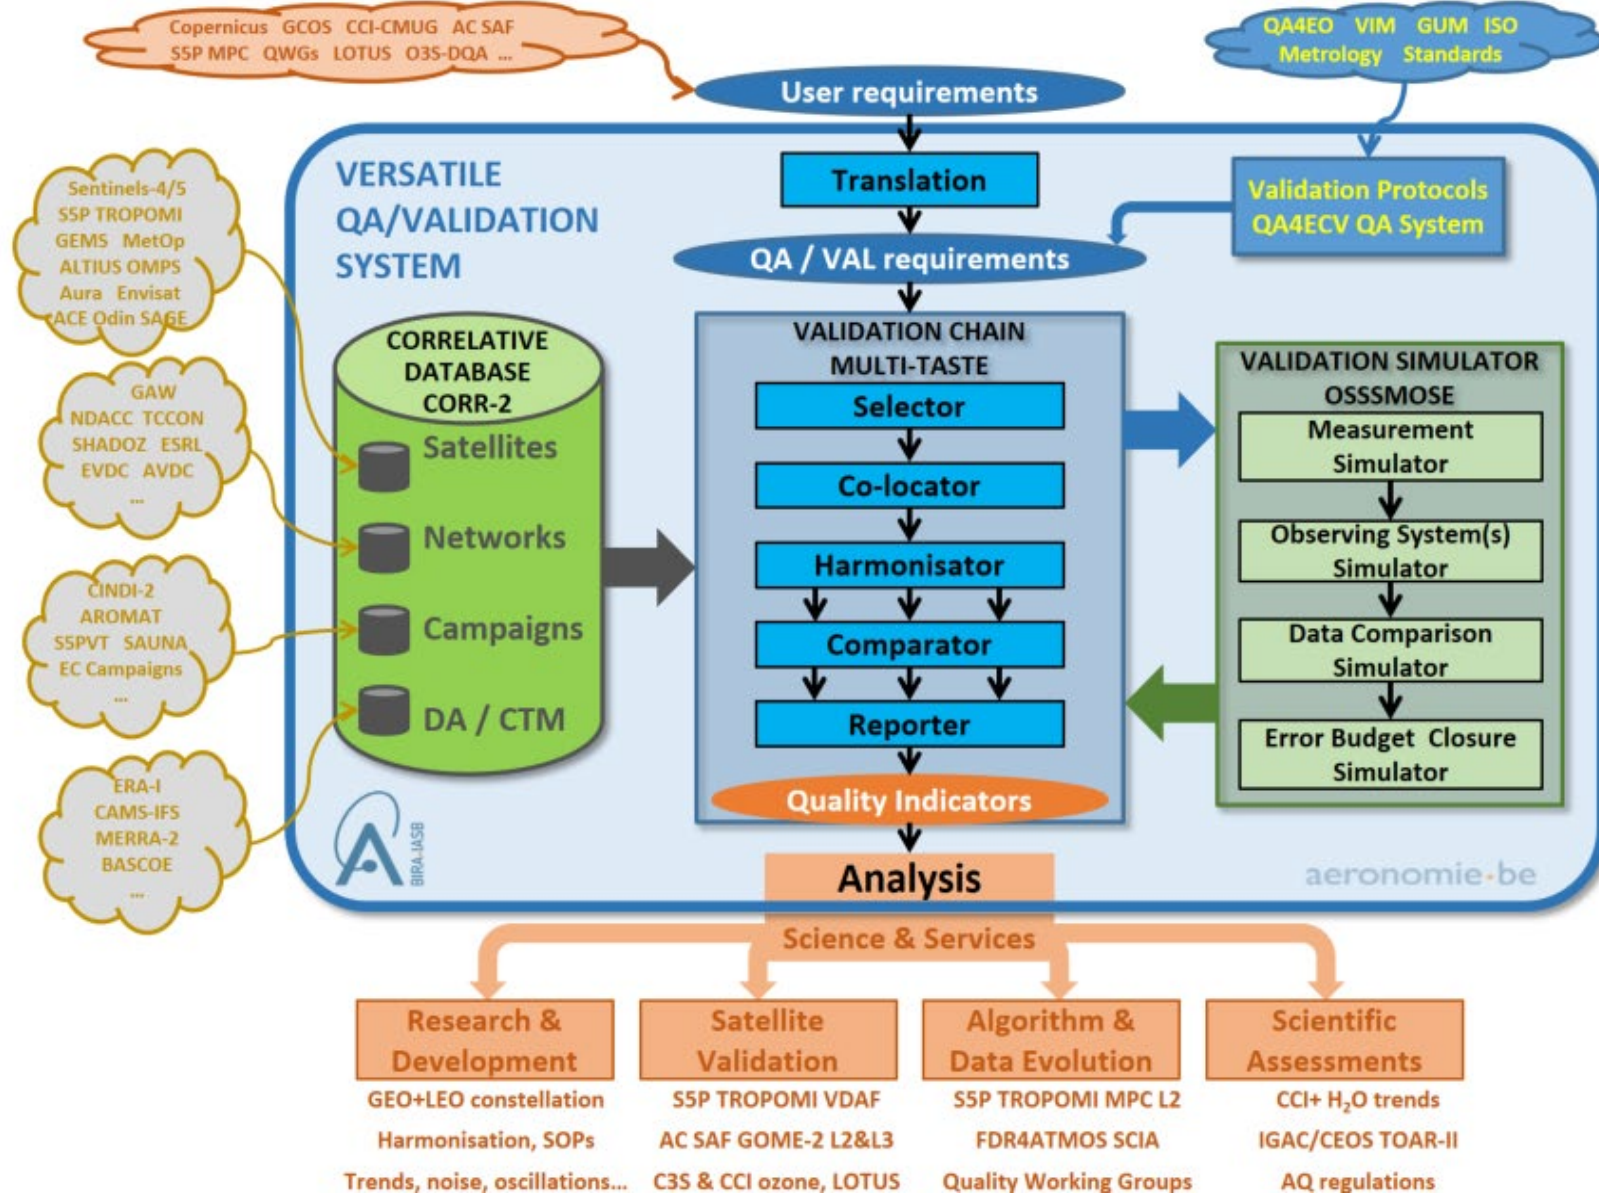

Early involvement of BASCOE 4D-var data assimilation system (Belgium), ECCO (Canada) modelling, and ECMWF (CAMS-IFS), preferably in parallel to FRM-based comparisons and satellite cross-validation:

- to get complementary insight into ALTIUS data quality
- to detect features not accessible by data comparisons
- to assess ALTIUS products readiness for data assimilation and applications.

Assessment of co-location mismatch uncertainties and of their impact on comparison results using metrology simulator OSSSMOSE

# Multi-TASTE :

# Multi-platform QA/Validation Expert System

# Pathfinder: the ESA/Copernicus Sentinel-5p MPC Routine Operations Validation Service

- **Monitoring of S5P products health**
- **Maintenance of S5P data quality documentation**
- **In-depth validation and support to L1/L2 algorithm evolution**
- **Synthesis with S5PVT results, ECMWF/CAMS, peer-reviewed literature...**

## Maintenance of Quality Indicators

Product ID	Stream	Product	Bias	Dispersion	Special features
L2_O3	NRTI	O <sub>3</sub> column	0.8%	2.5%	Larger dispersion over snow/ice due to coarse surface albedo climatology (up to but excluding v02.03a, which has a dynamic surface albedo determination). Some increase in overall bias (+0.7%) since v2.2.1 (5 July 2021) is possible.
	OFFL	O <sub>3</sub> column	0.3%	2%	Some increase in overall bias (+1.5%) since v2.2.1 (5 July 2021) is possible.
L2_O3_TCL	OFFL	O <sub>3</sub> tropospheric column (CCD)	+16%	25%	Geographical imprints of sampling-related biases. Seasonal change of the bias. More elevated positive bias during biomass burning conditions in Northern Hemisphere.
	NRTI	NO <sub>2</sub> troposphere NO <sub>2</sub> stratosphere NO <sub>2</sub> total	-37% -5% -650%	2.7 Pmolec/cm <sup>2</sup> 0.3 Pmolec/cm <sup>2</sup> -	Bias (underestimation) depends on column amount. Troposphere: low pollution (-2 Pmolec/cm <sup>2</sup> ) +10% (0.3 Pmolec/cm <sup>2</sup> ); high pollution (+15 Pmolec/cm <sup>2</sup> ) -46% (7.3 Pmolec/cm <sup>2</sup> ). Total 16 Pmolec/cm <sup>2</sup> ; 0.3 Pmolec/cm <sup>2</sup> and -22% (5 Pmolec/cm <sup>2</sup> ).
L2_NO2	OFFL	NO <sub>2</sub> troposphere NO <sub>2</sub> stratosphere NO <sub>2</sub> total	-34% -5% -7%	2.7 Pmolec/cm <sup>2</sup> 0.3 Pmolec/cm <sup>2</sup> 1.5 Pmolec/cm <sup>2</sup>	
	RPRO				
L2_HCHO	NRTI	HCHO, low	+27%	8 Pmolec/cm <sup>2</sup>	HCHO bias varies with column amount: positive bias over clean areas (+2.5 Pmolec/cm <sup>2</sup> ), negative bias over polluted areas (-8 Pmolec/cm <sup>2</sup> ).
	OFFL	HCHO, high	-29%	15 Pmolec/cm <sup>2</sup>	
L2_SO2	NRTI	SO <sub>2</sub> column	0.2 DU	0.2 DU	Lack of validation sites in areas with high SO <sub>2</sub> .
	OFFL	SO <sub>2</sub> column	0.2 DU	0.2 DU	
L2_CO	NRTI	CO column	6.5%	5%	Along orbit stripes. High pollution underestimated. 5% SZA dependence of bias. Outliers in SVA and other sporadic locations not filtered by QA <sub>CO</sub> . Since July 2019 NRTI sensor as OFFL. Quality indicators valid until the processor switch of July 1, 2021.
	OFFL	CO column	6.5%	5%	
L2_CH4	NRTI	CH4 column	-0.26%	0.55%	Along orbit stripes. Underestimation at low albedo. Remaining outliers with QA <sub>CH4</sub> = 0.5. 14% seasonal and SZA dependence of bias. Lower number of pixels with qa <sub>CH4</sub> = 5 since March 11 2020 due to changed cloud data.
	OFFL	CH4 column			
L2_CLOUD	CALv1	CTH (high)	-30%	2 km	Low clouds: CLOUDNET CTH-4km; high clouds: CLOUDNET CTH-4km.
	CALv2	CTH (high)	-40%	2 km	Snow/ice albedo degrades retrievals, improved with version 02.01.03.
	CALv1	CTH (low)	-15%	0.5 km	Occurrence of CTH equal to surface height at low cloud fraction.
	CALv2	CTH (low)	-15%	0.5 km	
	CRDv1	CH (high)	-30%	1.5 km	Across track CTH and CF pattern, improved with version 02.01.03.
	CRDv1	CH (low)	-30%	1.5 km	Across track CTH and CF pattern, improved with version 02.01.03.

## Product Readme Files

**S5P Mission Performance Centre**  
**Carbon Monoxide [L2\_CO\_...] Readme**

**Quarterly Validation Report**

Quarterly Validation Report of the Copernicus Sentinel-5 Precursor Operational Data Products #14: April 2018 – March 2022

# ALTIUS validation operations and organization – Phase E1

- Mission Performance Cluster (MPC) like organization and facilities recommended
  - Level-1 and Level-2 verification performed by ALTIUS product development and production teams
  - Core validation performed by dedicated VAL team with Multi-TASTE expert toolset
  - Start of validation tasks with the operational validation system that will serve for routine operations validation in Phase E2
  - Close loop between ESA, L1, L2, VAL, core users
- Initial, off-line uptake and assessment of first ALTIUS data by operational user services planning later the assimilation of ALTIUS data in their systems: BASCOE, ECCO, ECMWF (CAMS-IFS)
- Complementary validation activities proposed by external teams responding to an Announcement of Opportunity for ALTIUS validation and coordinated by ESA and partners in the framework of an international ALTIUS Validation Team
- Pre-launch rehearsal campaign(s) required

# Future Announcement of Opportunity

- ESA considers publication of an Announcement of Opportunity for the Cal/Val of ALTIUS approximately 2 years before ALTIUS launch.
- Objectives:
  - to open the ALTIUS Cal/Val to the international community and to a wider range of external validation data and activities,
  - to foster exchanges within the validation community and with the instrument and algorithm experts,
  - to address validation of other ALTIUS species than ozone,
  - to promote the use of ALTIUS data.
