23/5/22

OBJECTIVES

- Harvest the outcome of the PV-LAC demonstration study;
- To develop, test and validate an advanced algorithm for the generation of a Long-Term Data Record (LTDR) of AOT and surface BHR using the SPOT-VGT and PROBA-V archive of 1km data;
- Take advantage of the MEP facility;

DELIVERABLES

- One year (2019) of AOT and surface BHR at 1 km resolution over Europe;
- a long-term (1998 – 2019) data record of AOT and BHR at 1km resolution over key macro-regions around selected AERONET stations;
- Global processing for one year at 5km resolution.

- To develop, test and validate an advanced algorithm for the generation of a Long-Term Data Record (LTDR) of AOT and surface BHR using the SPOT-VGT and PROBA-V archive of 1km data;
- Take advantage of the MEP facility;

DELIVERABLES

- One year (2019) of AOT and surface BHR at 1 km resolution over Europe; ✓
- a long-term (1998 – 2019) data record of AOT and BHR at 1km resolution over key macro-regions around selected AERONET stations; ✓
- Global processing for one year at 5km resolution. ✗

The SPAR@MEP Project: Background

CISAR is a generic algorithm for the inversion of the couple surface-atmosphere system with continuous variation of the state variable in the solution space.

CISAR can process all-sky observations, relying on the cloud mask associated to the Level-1 product to build the prior information on the atmospheric state.

CISAR is deployed through the Generic Data Processing Chain (GEDAP) and installed on the MEP through Docker images.

- The SPAR@MEP project exploits the **MEP** facilities to process observations acquired by **VGT1, VGT2 and PROBA-V**.
- The **product at 1km** obtained from PROBA-V **over Europe during 2020** shows interesting cases over **dust storms, fires, and ship trails**, showing the advantages of processing all-sky observations and to invert data at such high resolution.
- The **LTDR** over the selected key areas shows CISAR's capabilities of delivering a **consistent product among different sensors**, given that the latter are **properly characterised and harmonised**.
