

Comparing Remotely Sensed Land Surface Temperature and Climatic Reanalysis for invasive mosquitoes' mechanistic model

ESA Living Planet Symposium

24/05/2022

Daniele Da Re - ELIC (UCLouvain)

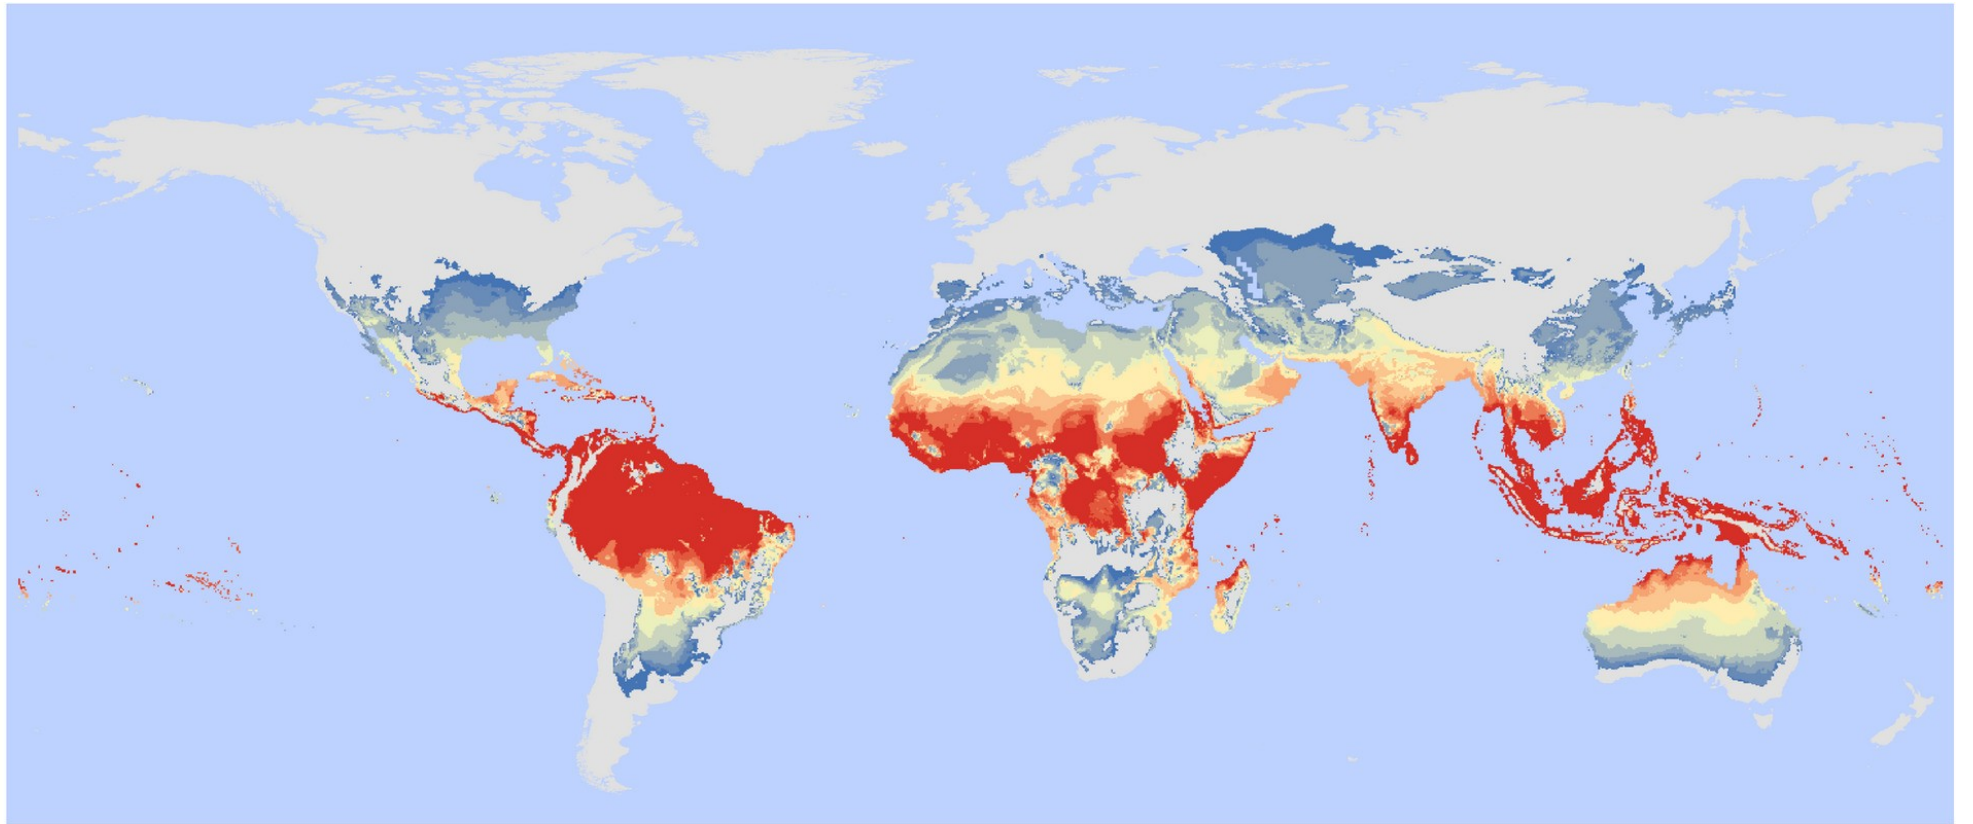

Matteo Marcantonio - ELI (UCLouvain)

Guillaume Lacour - Altopictus

Sophie O. Vanwambeke - ELIC (UCLouvain)

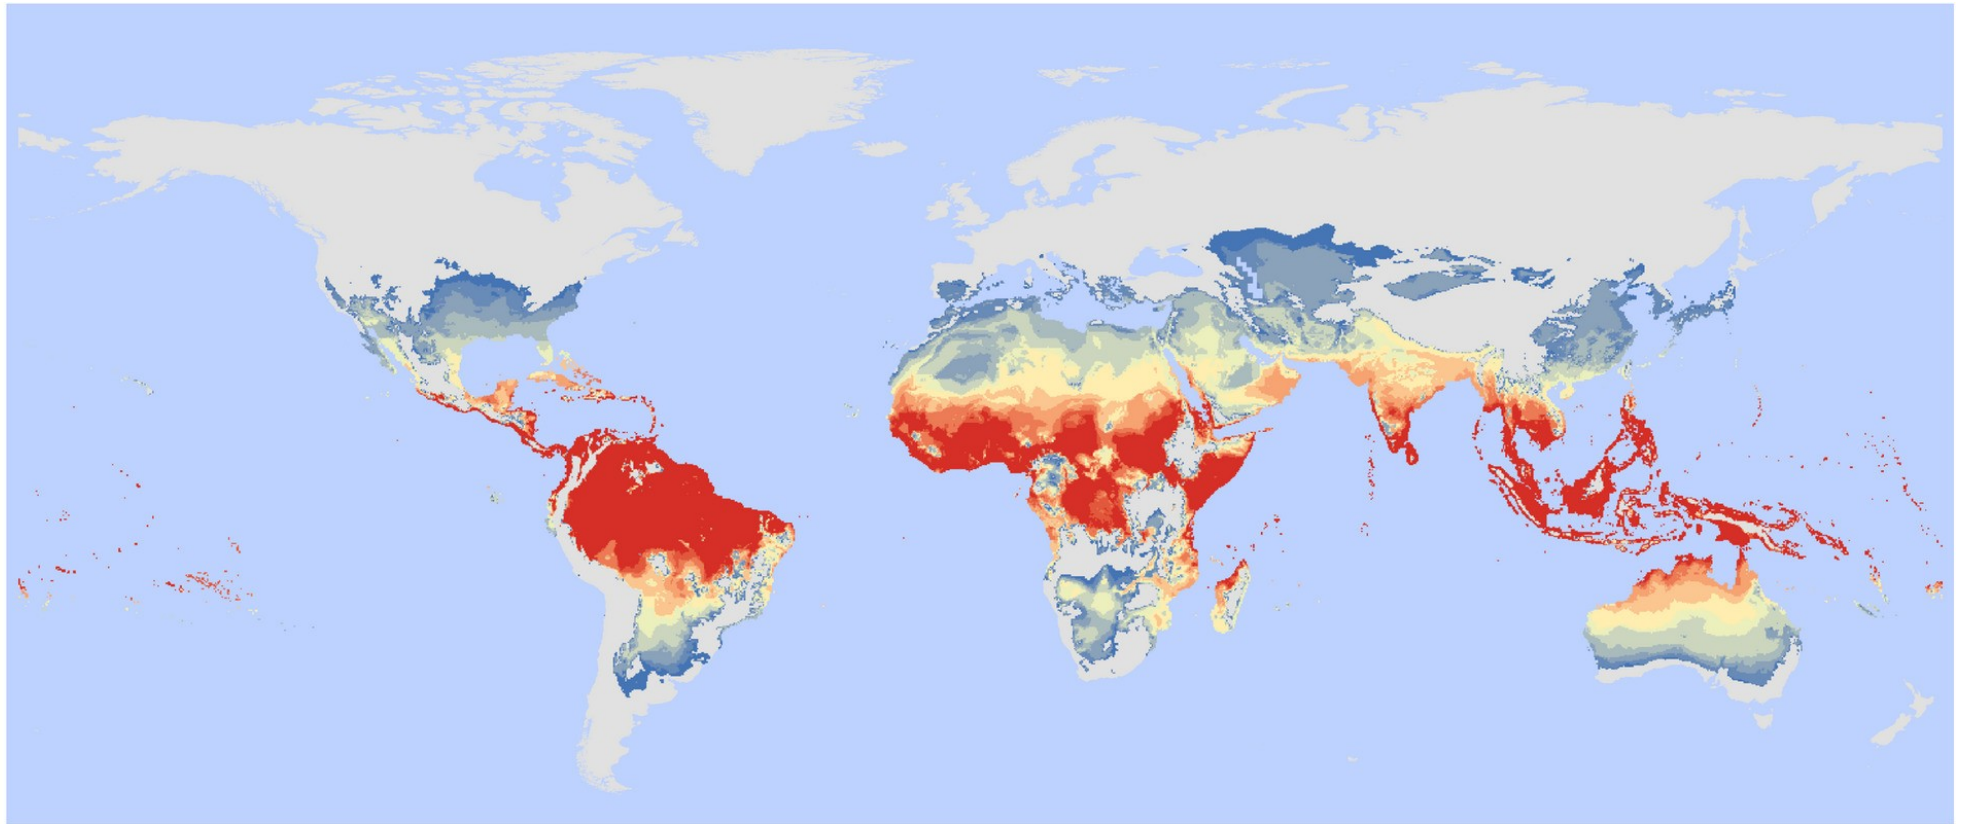

Number of suitable months with ZIKV $R_0(T) > 0$

Months

Number of suitable months with ZIKV $R_0(T) > 0$

Months

$$R_0 = R_{0_{HV}} R_{0_{VH}} = \sqrt{k^2 \frac{\beta_{HM} \beta_{MH} N_V}{\frac{1}{H_{infPer}} \mu_v N_H} \frac{\frac{1}{EIP}}{\frac{1}{EIP} + \mu_v}}$$

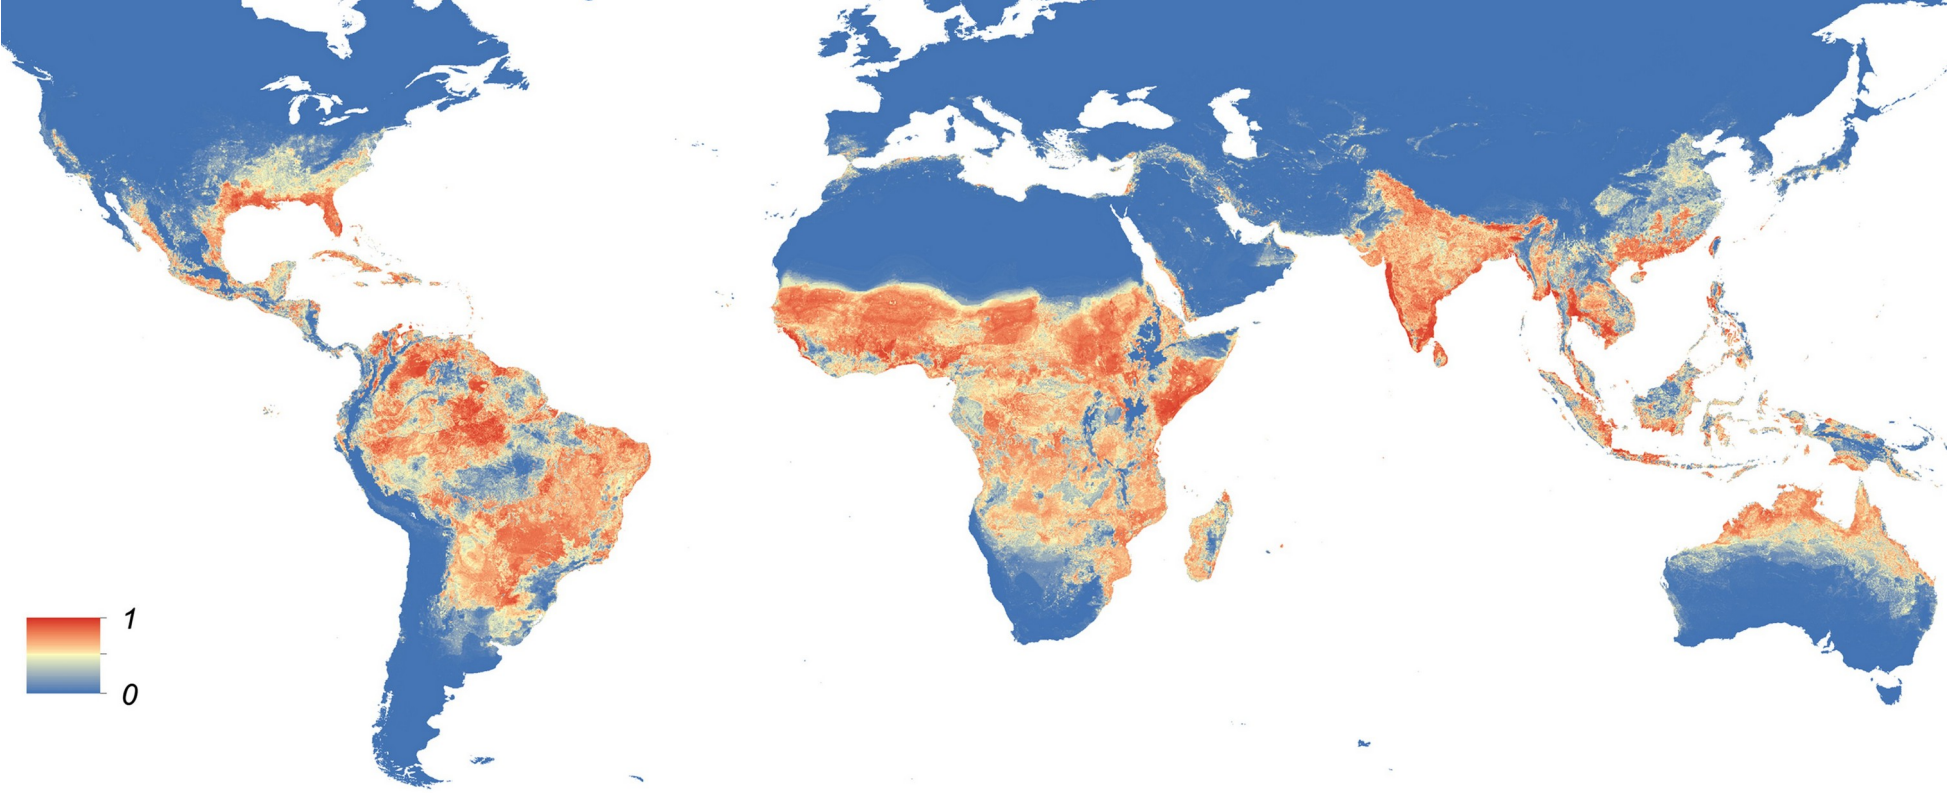

Number of suitable months with ZIKV $R_0(T) > 0$

Months

$$R_0 = R_{0_{HV}} R_{0_{VH}} = \sqrt{k^2 \frac{\beta_{HM} \beta_{MH} N_V}{\frac{1}{H_{infPer}} \mu_v N_H} \frac{1}{EIP} \frac{1}{EIP + \mu_v}}$$

Probability of *Ae. aegypti* occurrence

dynamAedes

A unified population dynamic modelling framework for invasive *Aedes* species

Main characteristics of dynamAedes

- Four *Aedes* species: *Ae. aegypti*, *Ae. albopictus*, *Ae. japonicus* and *Ae. koreicus*

Main characteristics of dynamAedes

- Four *Aedes* species: *Ae. aegypti*, *Ae. albopictus*, *Ae. japonicus* and *Ae. koreicus*
- Temperature-dependent beta regressions for development and mortality rates

Main characteristics of dynamAedes

- Four *Aedes* species: *Ae. aegypti*, *Ae. albopictus*, *Ae. japonicus* and *Ae. koreicus*
- Temperature-dependent beta regressions for development and mortality rates
- Photoperiod-dependent functions for egg hatching and diapausing eggs production

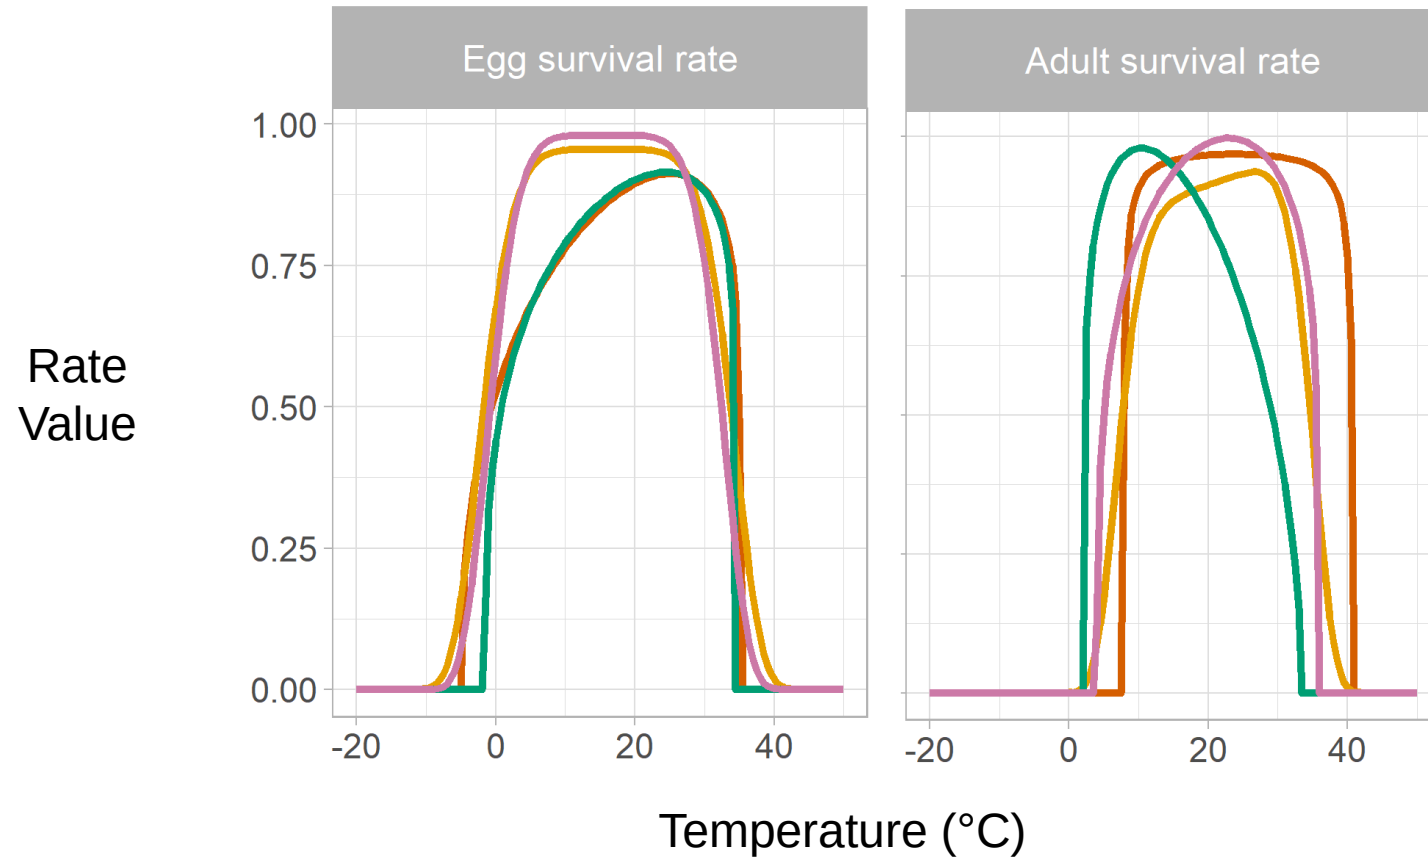

Main characteristics of dynamAedes

- Four *Aedes* species: *Ae. aegypti*, *Ae. albopictus*, *Ae. japonicus* and *Ae. koreicus*
- Temperature-dependent beta regressions for development and mortality rates
- Photoperiod-dependent functions for egg hatching and diapausing eggs production
- Three different spatial scales

Main characteristics of dynamAedes

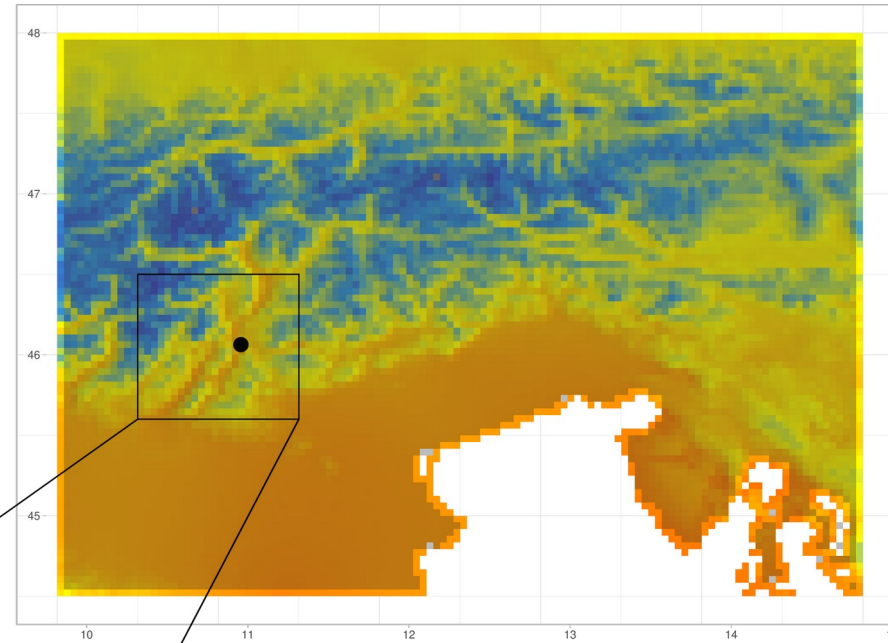

- Four *Aedes* species: *Ae. aegypti*, *Ae. albopictus*, *Ae. japonicus* and *Ae. koreicus*
- Temperature-dependent beta regressions for development and mortality rates
- Photoperiod-dependent functions for egg hatching and diapausing eggs production
- Three different spatial scales
- Active and Passive dispersal (parametrised from MRR and scientific literature)

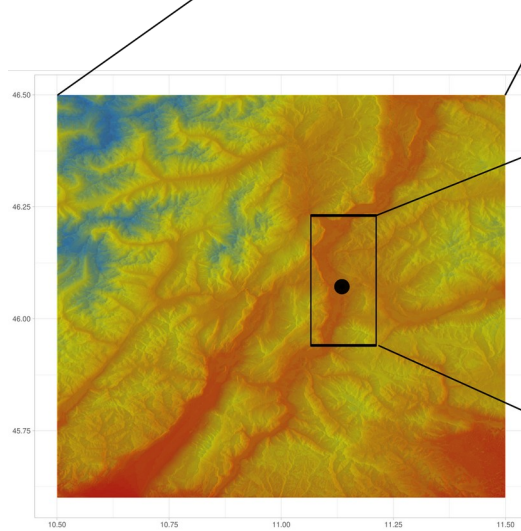

Species — *Ae. aegypti* — *Ae. albopictus* — *Ae. japonicus* — *Ae. koreicus*

Spatial scales

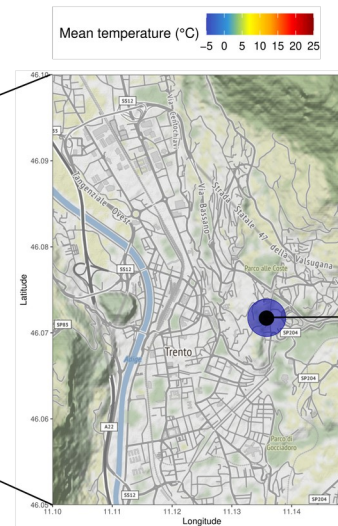

Regional scale
(spatial resolution > 1km)

a)

b)

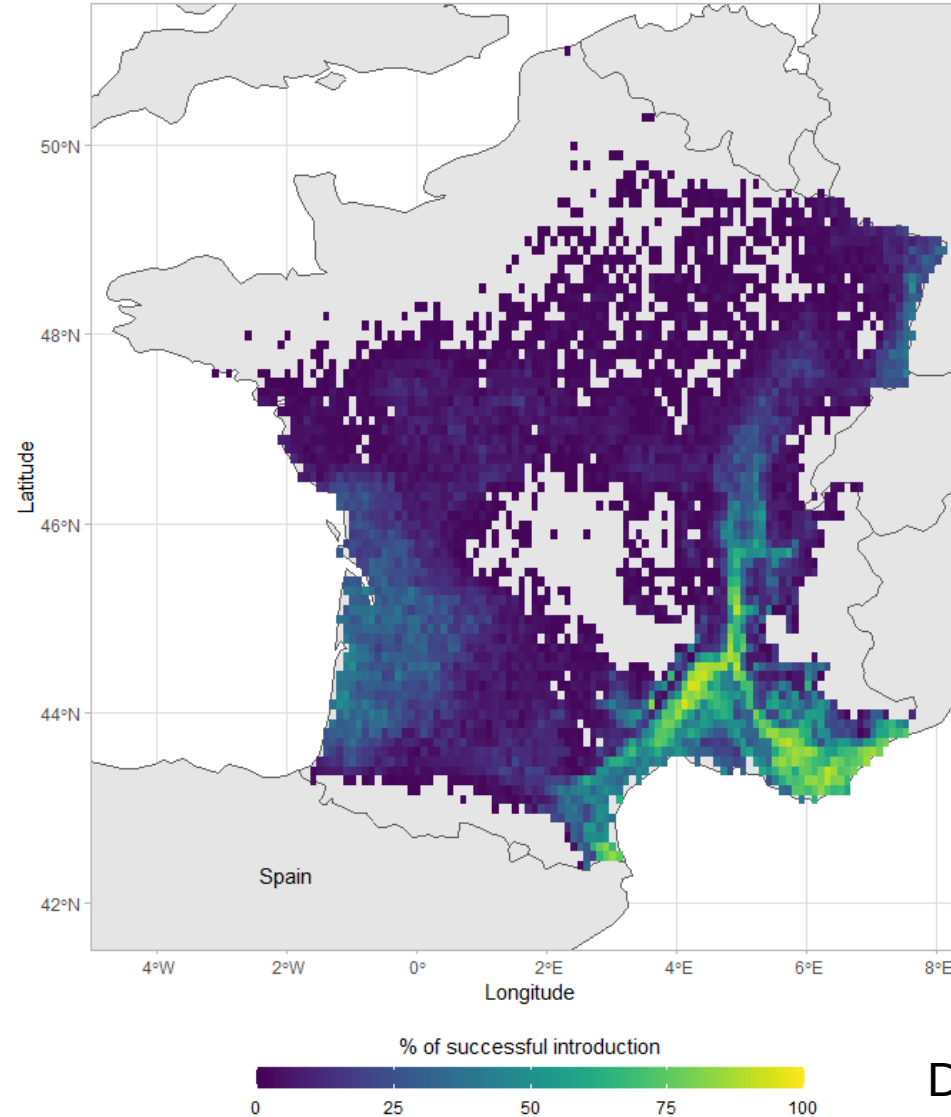

c)

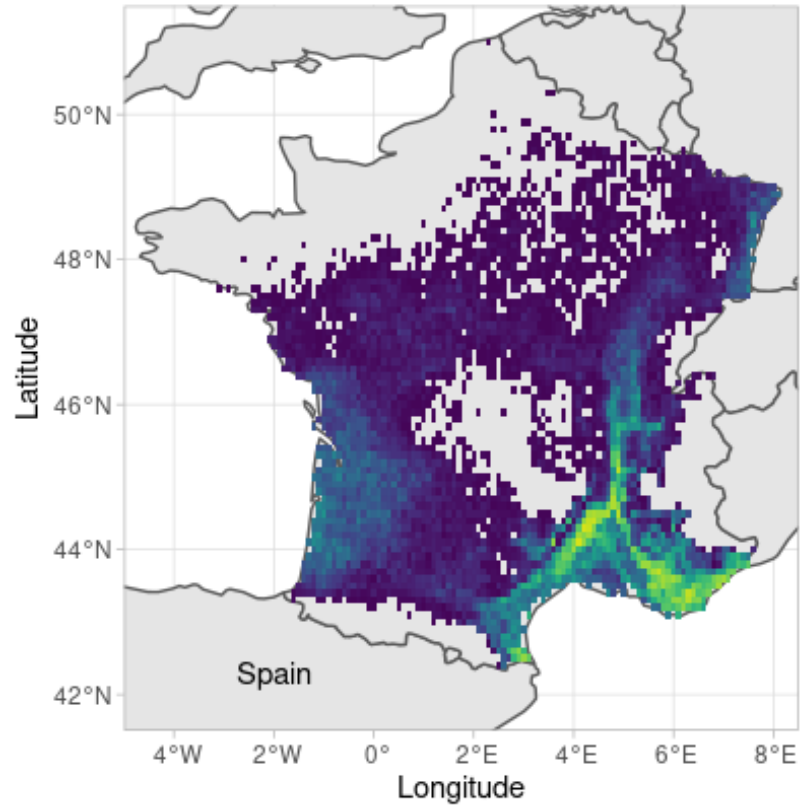

Local scale (spatial resolution < 1km)

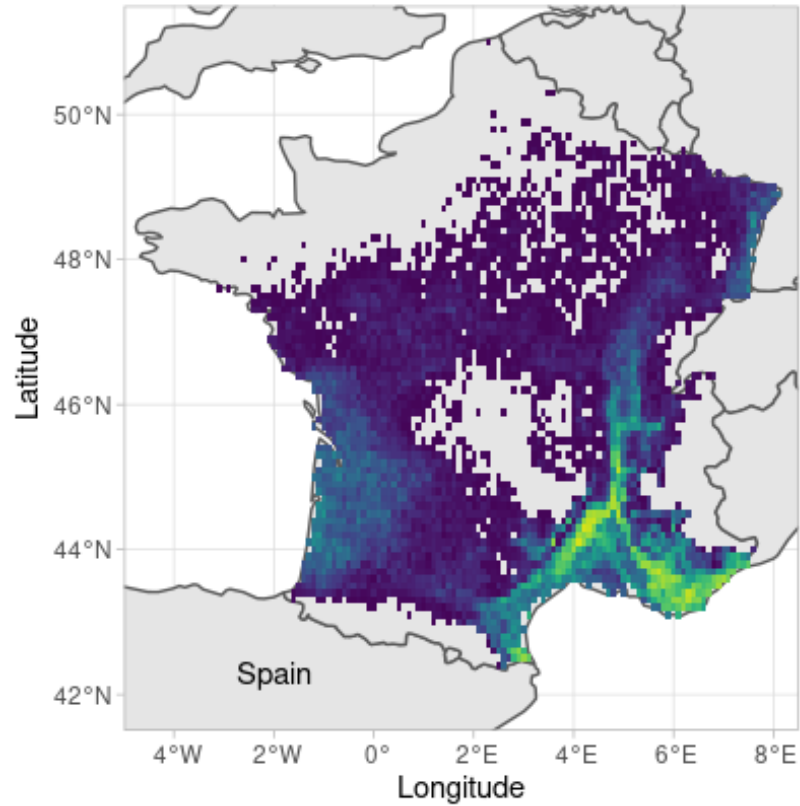

Weather station scale

Ae. albopictus regional 2015-2020 model: percentage of successful introductions

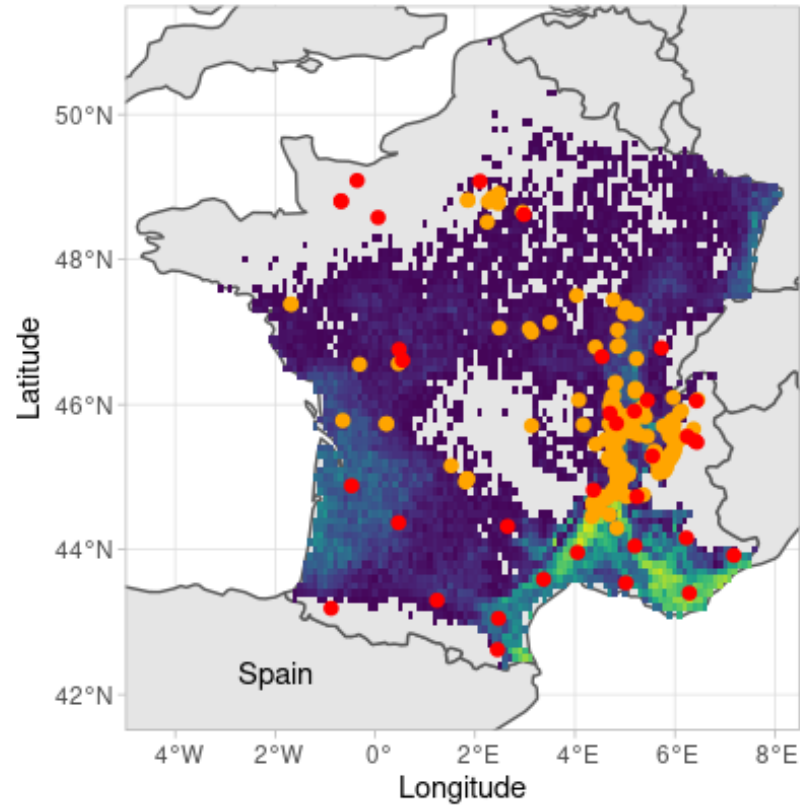

AUC: 0.874 (0.867-0.880)

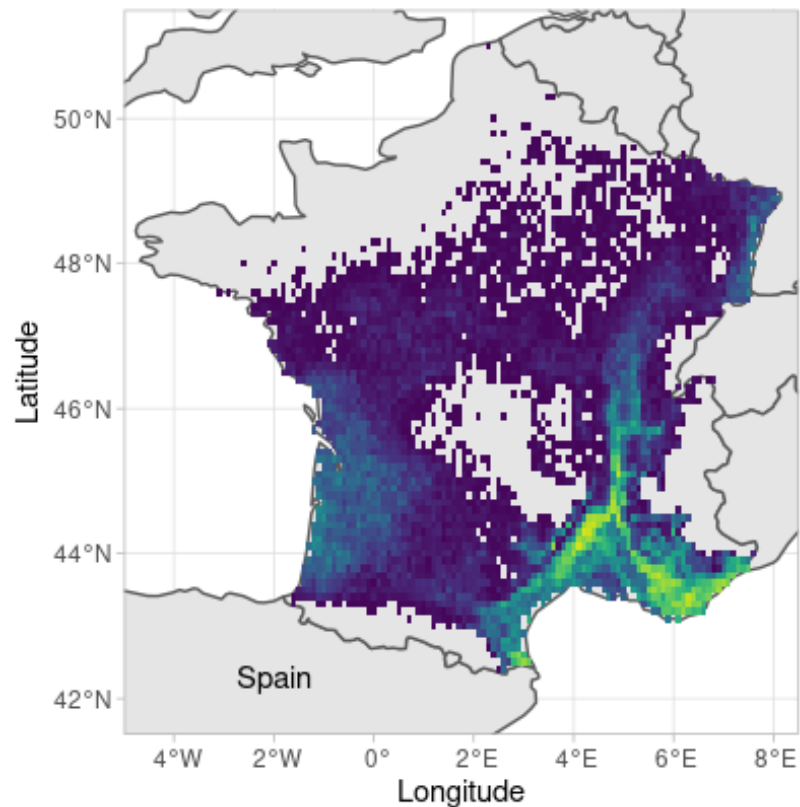

AUC: 0.874 (0.867-0.880)

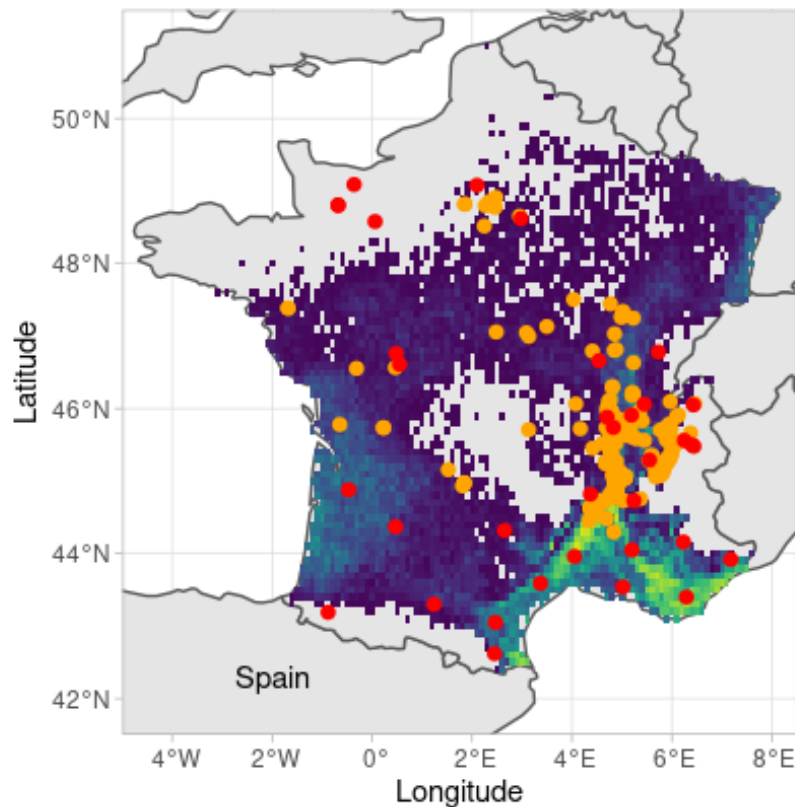

- Kramer et al., 2015
- Vectornet 2021

88% of the occurrences fall on a pixel having > 1 % successful introduction

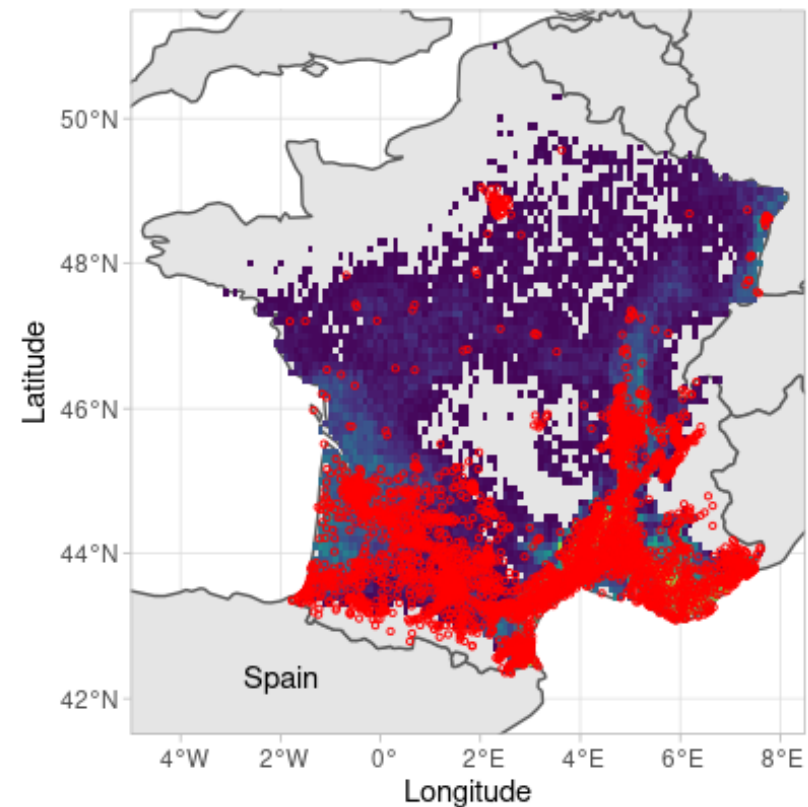

AUC: 0.874 (0.867-0.880)

- Kramer et al., 2015
- Vectornet 2021

88% of the occurrences fall on a pixel having > 1 % successful introduction

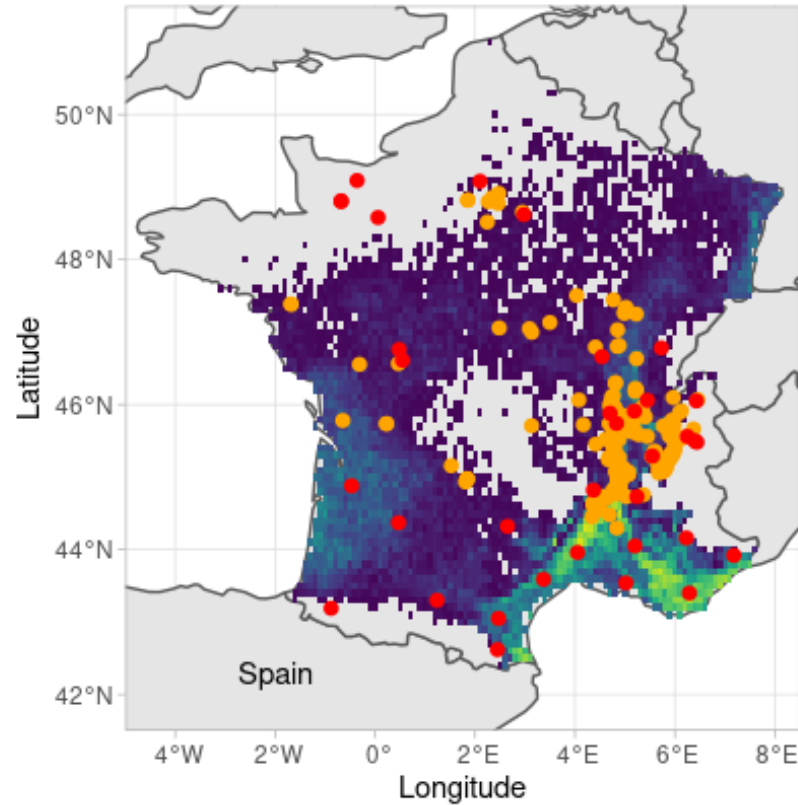

- SI LAV 2021

84% of the occurrences fall on a pixel having > 1 % successful introduction

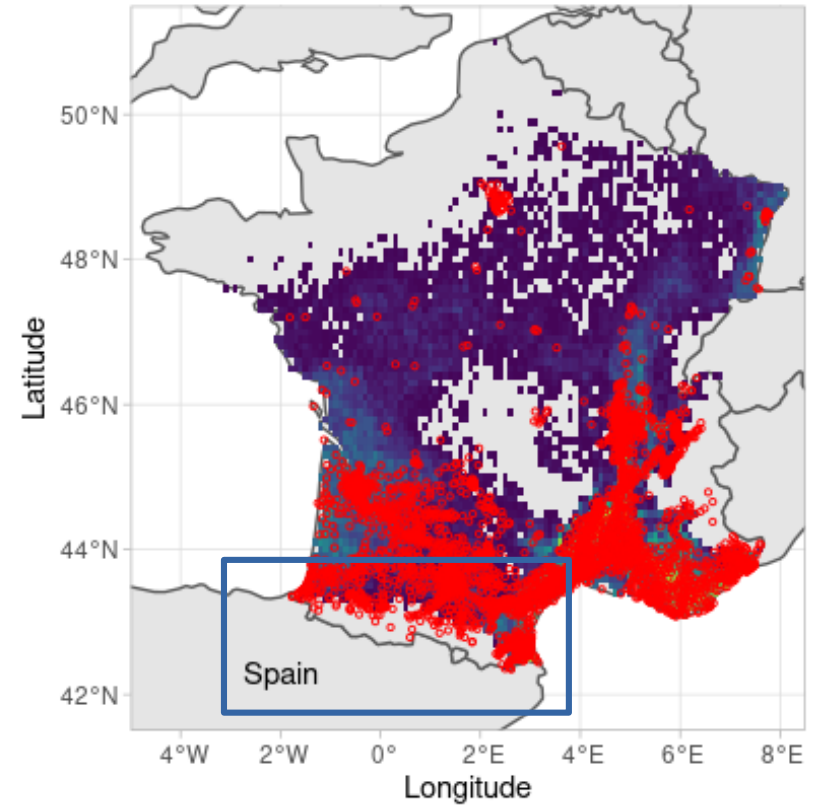

AUC: 0.874 (0.867-0.880)

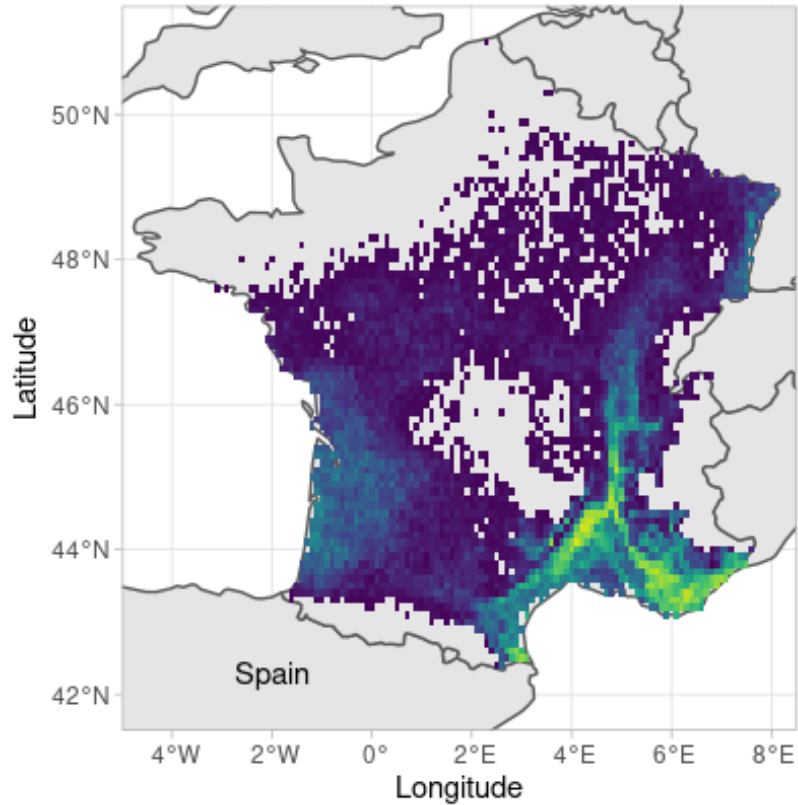

- Kramer et al., 2015
- Vectornet 2021

88% of the occurrences fall on a pixel having > 1 % successful introduction

Final thoughts

Spatial scale and the choice of the temperature dataset matters!

Final thoughts

Spatial scale and the choice of the temperature dataset matters!

Usage and Popularity: MODIS LST \gg ERA5Land

Spatial resolution: MODIS LST \gg ERA5Land (native)

Temporal resolution: MODIS LST \ll ERA5Land

Take home message

Using a downscaling approach

dynamAedes informed with
ERA5-Land performed better!
