Outline

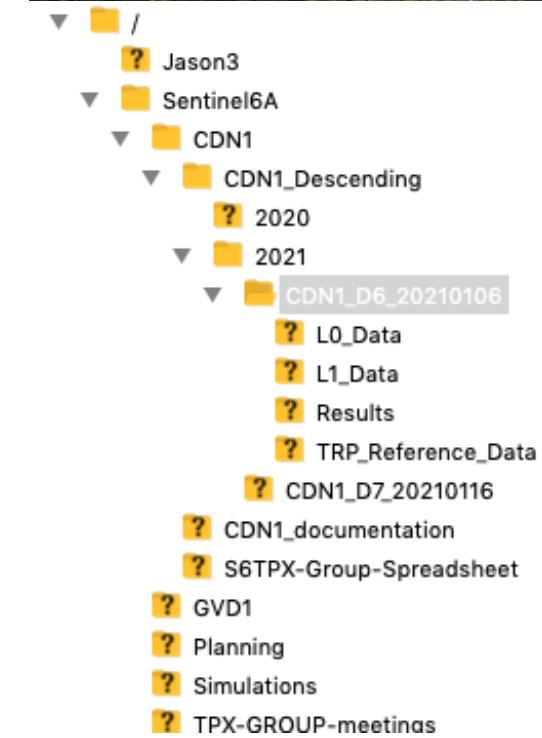

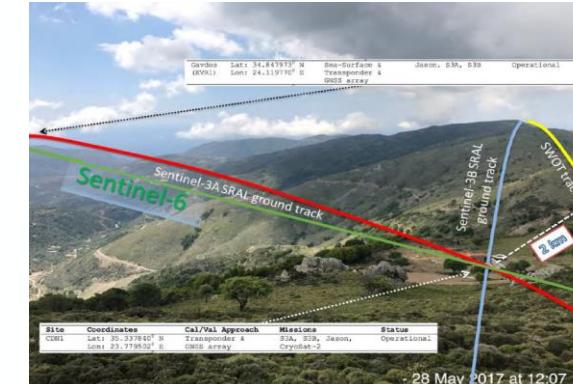

- Overview
 - S6TPX group
 - Cal/Val infrastructures
 - Performed processing and analysis
- Results
 - Range and datation bias comparative results
 - Corner reflector results (by isardSAT)
 - Jason-3 results (by TUC)
 - Resolution results (by Aresys)
- Conclusion

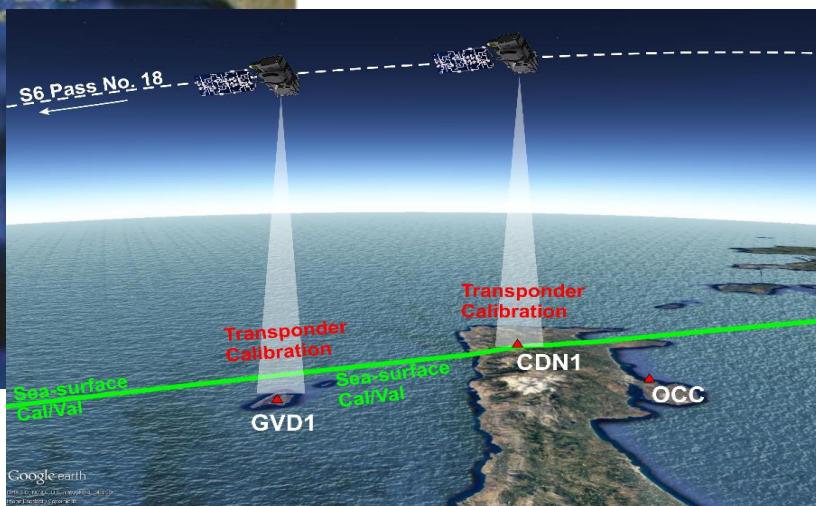

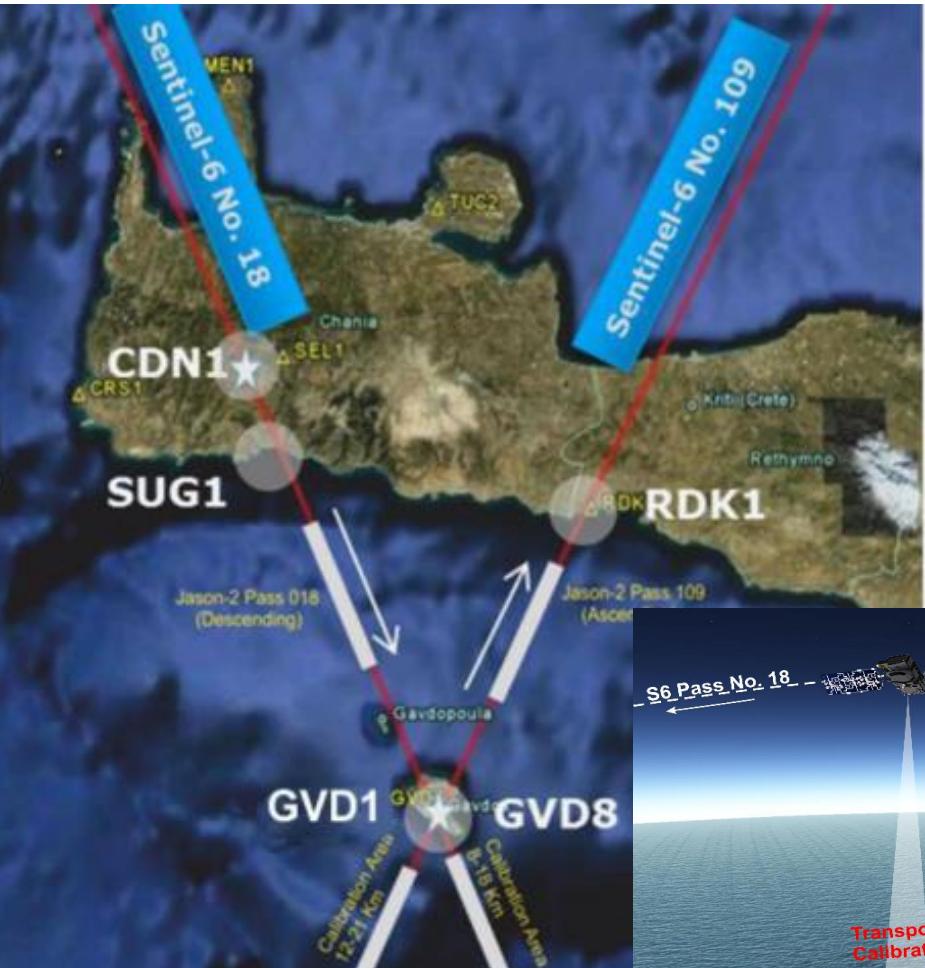

S6TPX Group Overview

- S6TPX group was convened by ESA to work openly and collaboratively with transponder specialists (as part of the ESA FRM4S6 project – the ESA contribution to S6 Cal/Val),
- S6TPX group coordinates results with same input data (PDAP & GPP) collected:
 - By different teams,
 - Different independent processing systems,
 - Different statistical analyses,
 - Cal/Val infrastructures (Transponders: CDN1, GVD1, JPL; Corner reflectors).
- Met 22 times, before the Sentinel-6 November 2020,
- Full and open exchange of data, results, processing, corrections etc.,
- Aim of S6TPX group to confirm & monitor Sentinel-6 in flight performance,
- Results on Datation, Range bias and PTR characteristics.

Cal/Val Infrastructures Overview

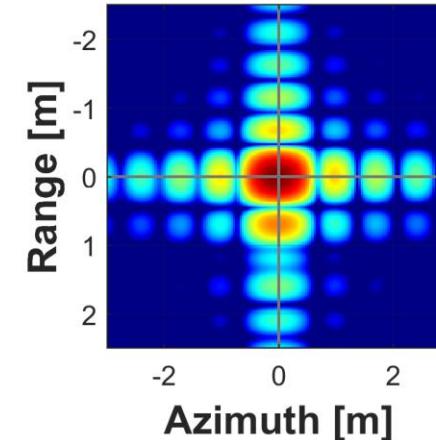

- Two transponders in Crete: CDN1 (Crete) and GVD1 (Gavdos),
- CDN1 and GVD1 separated 9 sec apart on D.18 Orbit,
- GVD1 located on ascending and descending orbits,
- Almost 50 passes on CDN1 and 20 passes on GVD1,
- Also evaluated:
 - isardSAT CR,
 - JPL TRP.

Data Analysis Overview

- Sentinel-6 L1A data are processed:
 - Delay-Doppler (low resolution),
 - Fully Focused (high resolution).
- Range biases are corrected for
 - Transponder internal delay,
 - Atmospheric delay (wet + dry + iono),
 - Solid earth tides.
- IRF analyzed to assess:
 - Resolution,
 - Side Lobe Levels,
 - Range bias,
 - Datation bias.

IRF Analysis

Resolution

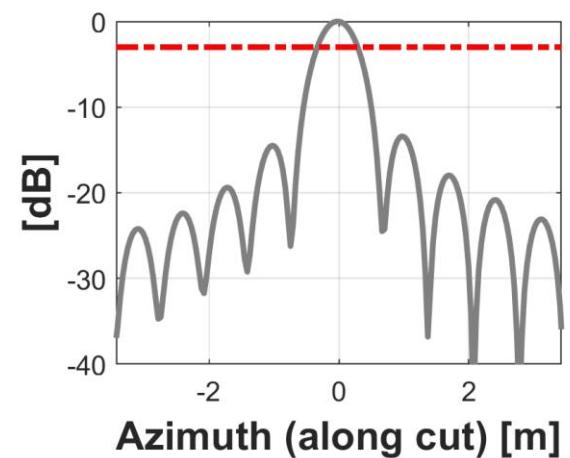

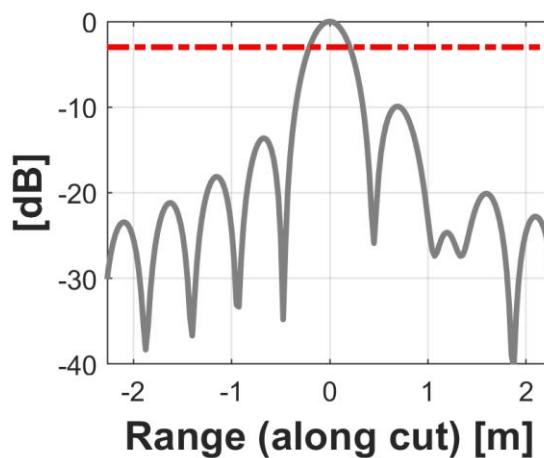

Range resolution : 0.41 [m]
Azimuth resolution : 0.62 [m]

PSLR

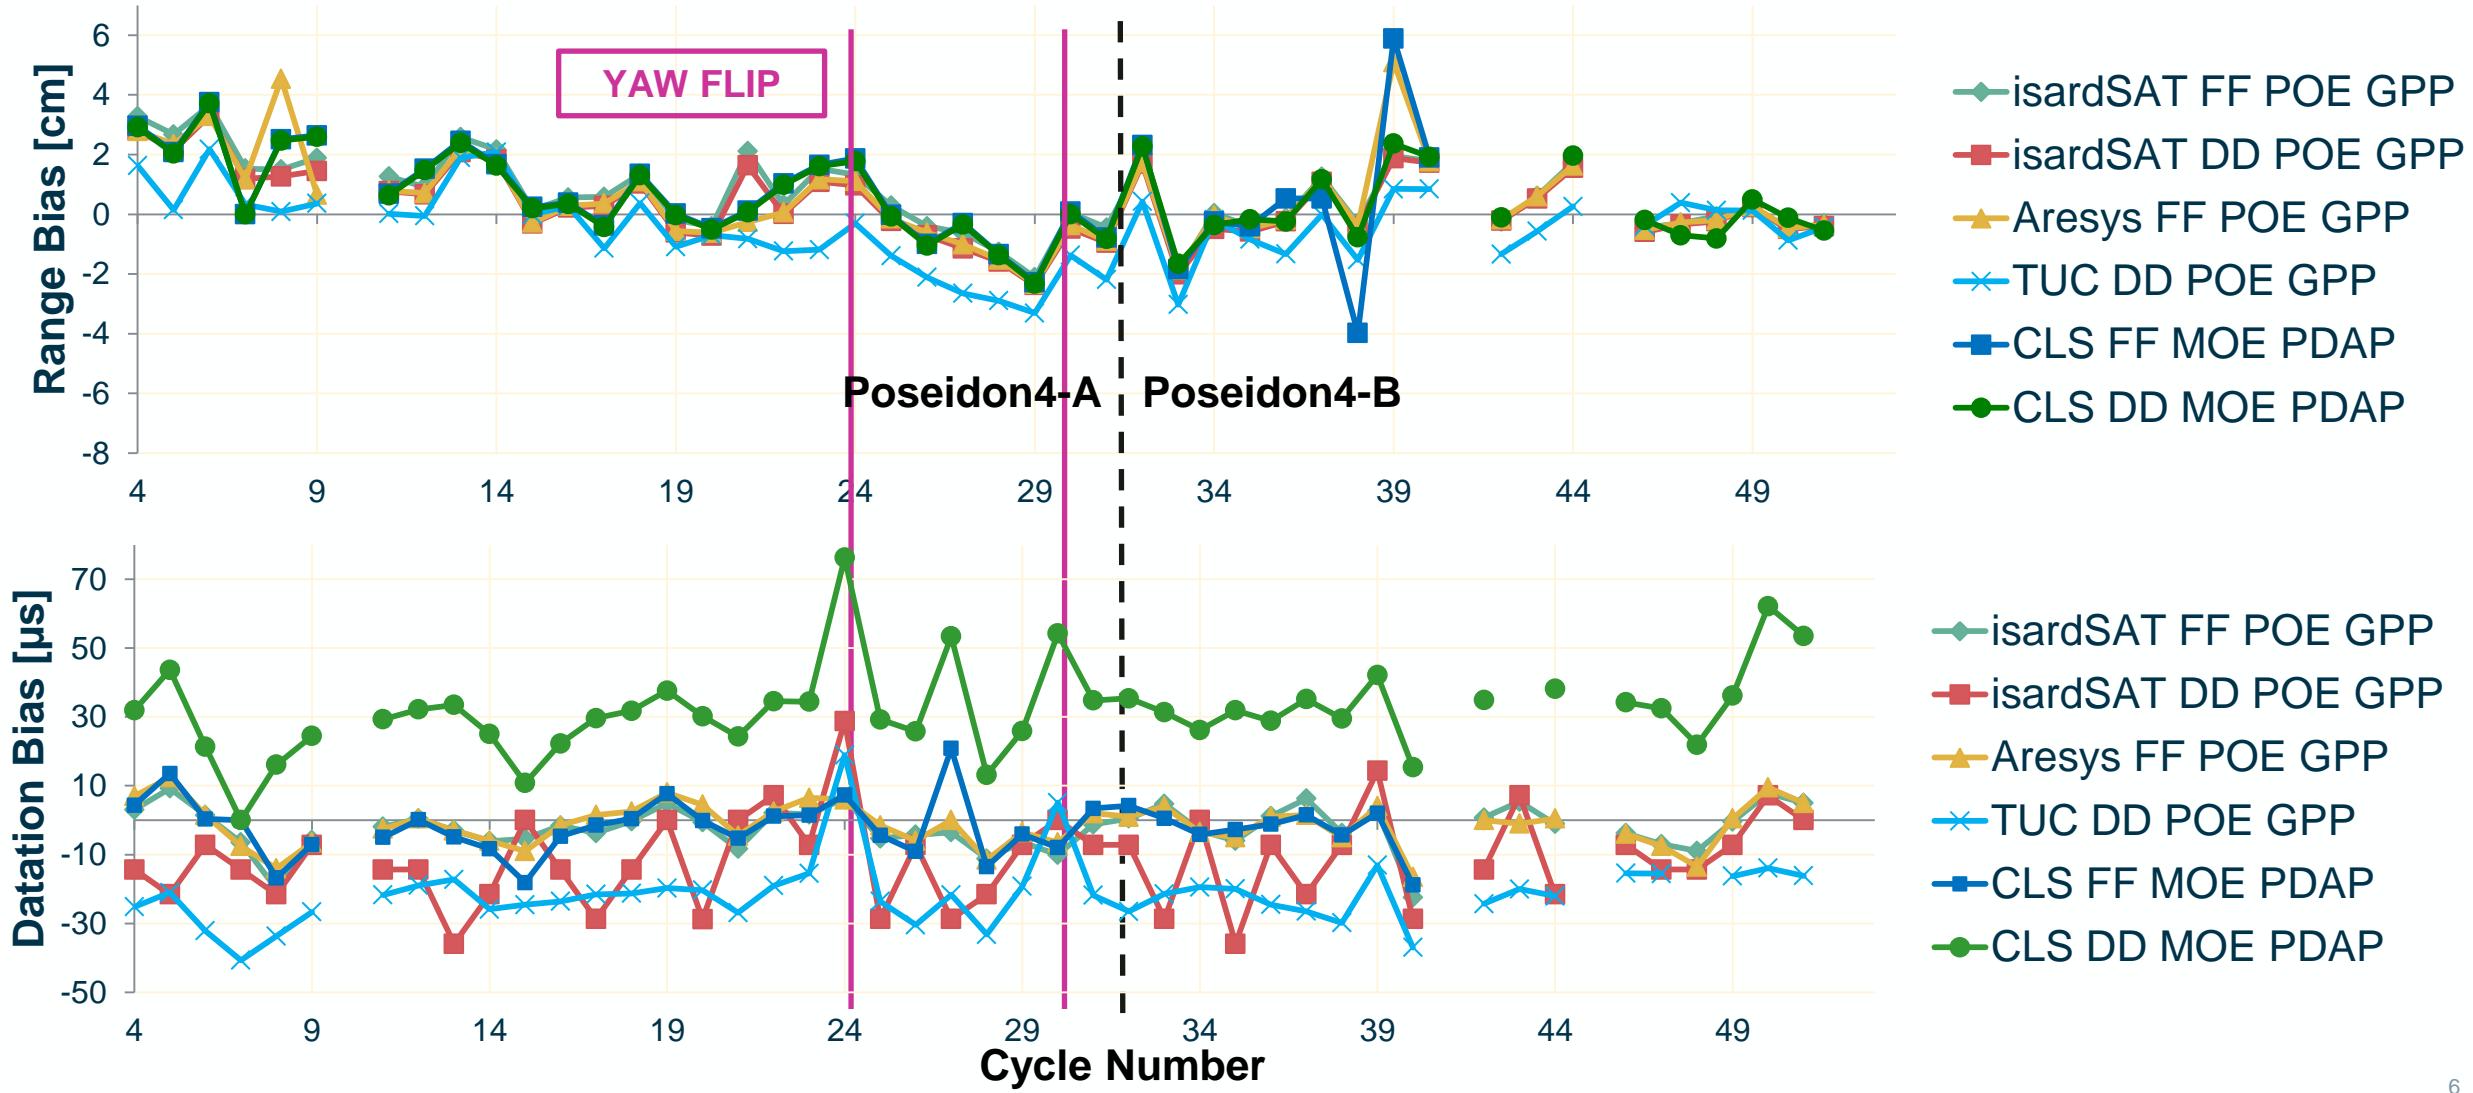

Range PSLR : -9.91 [dB]
Azimuth PSLR : -13.39 [dB]

ISLR

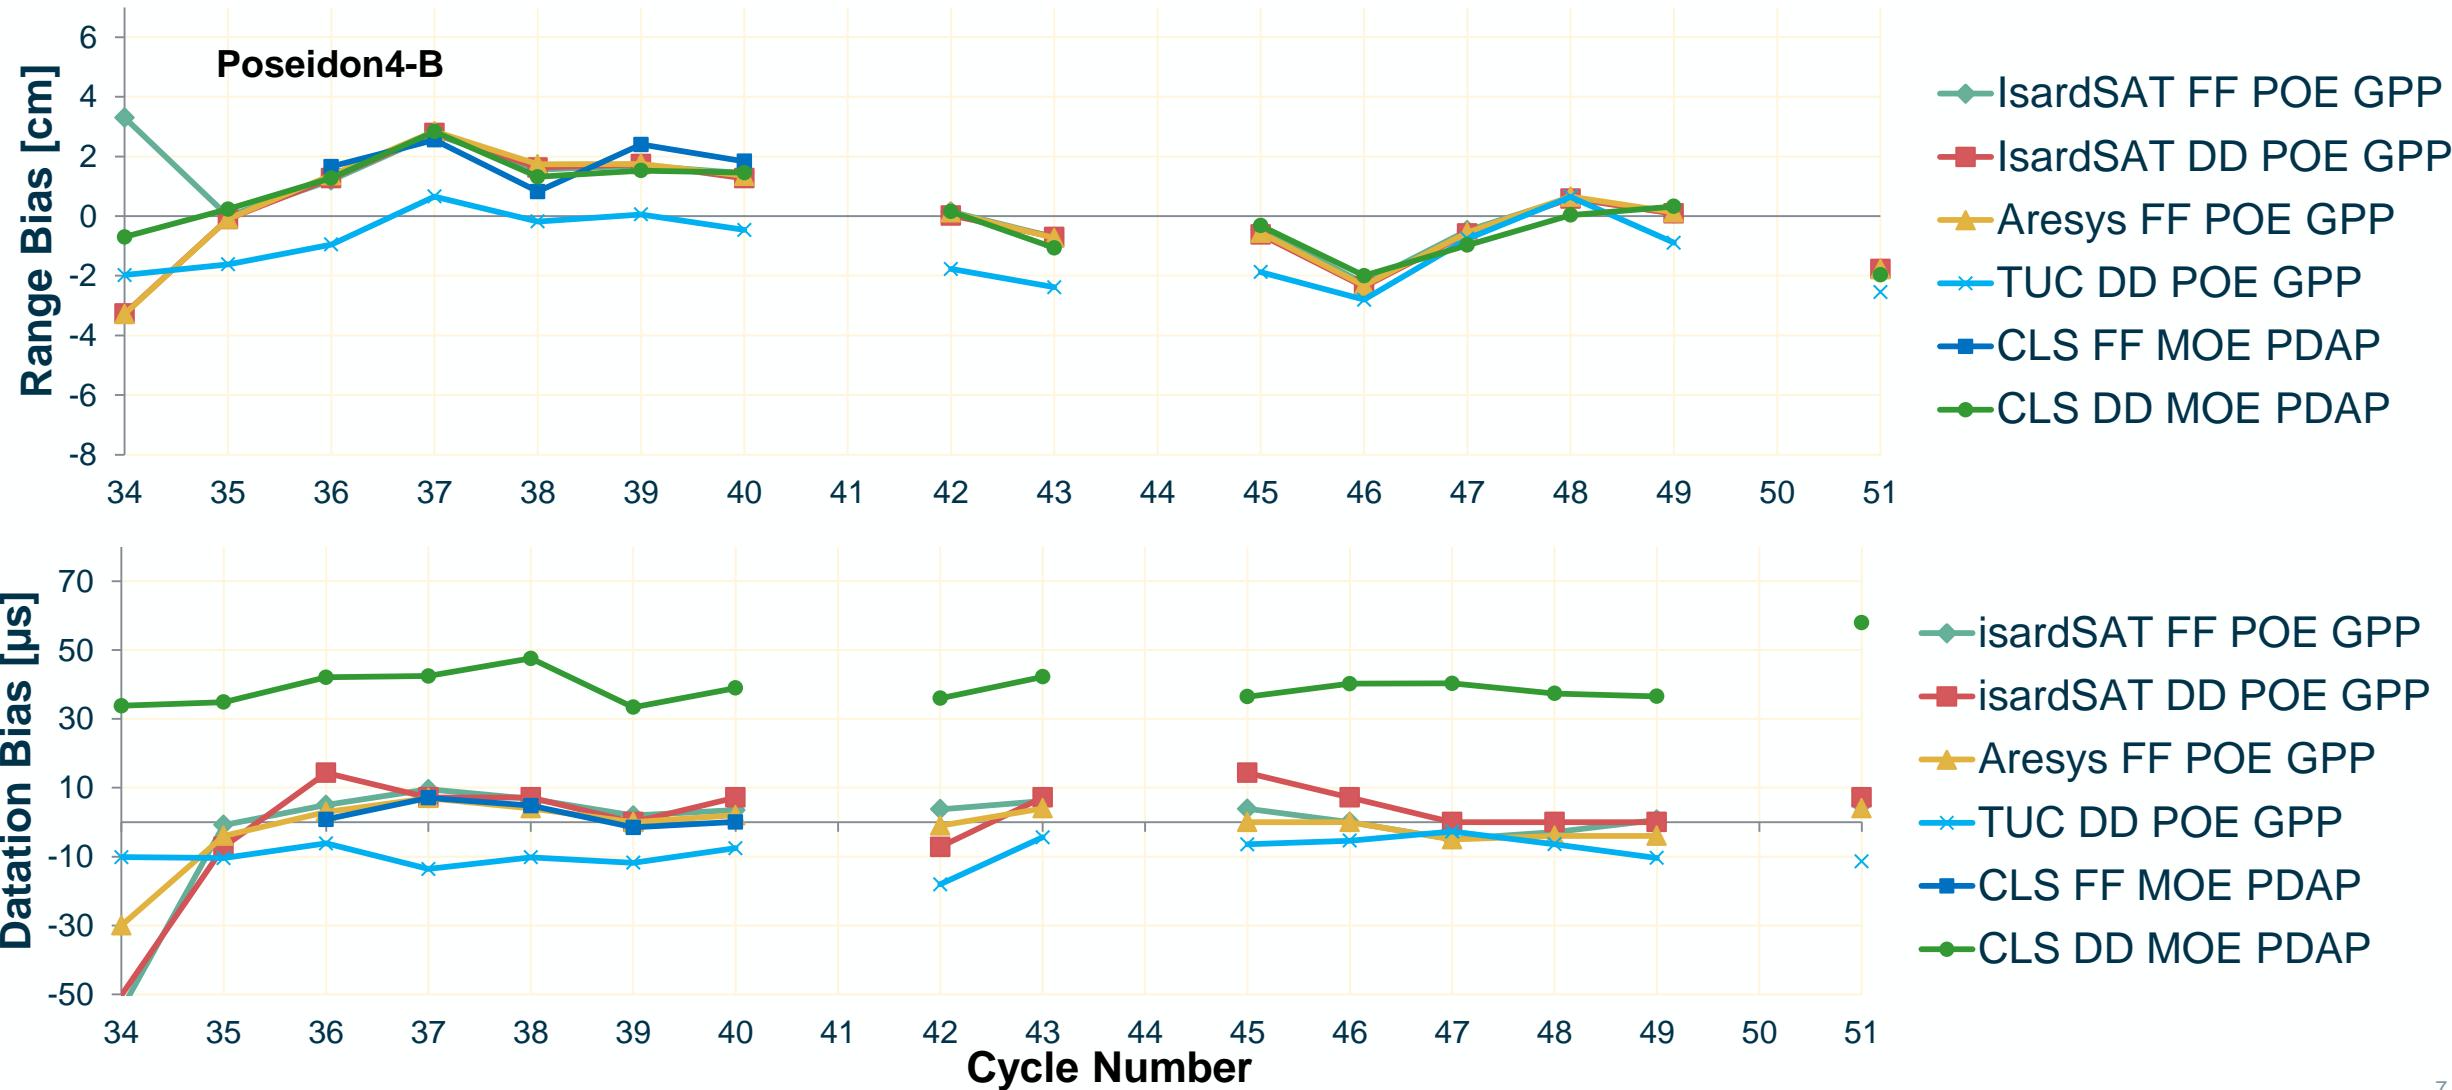

Range ISLR : -8.64 [dB]
Azimuth ISLR : -10.81 [dB]

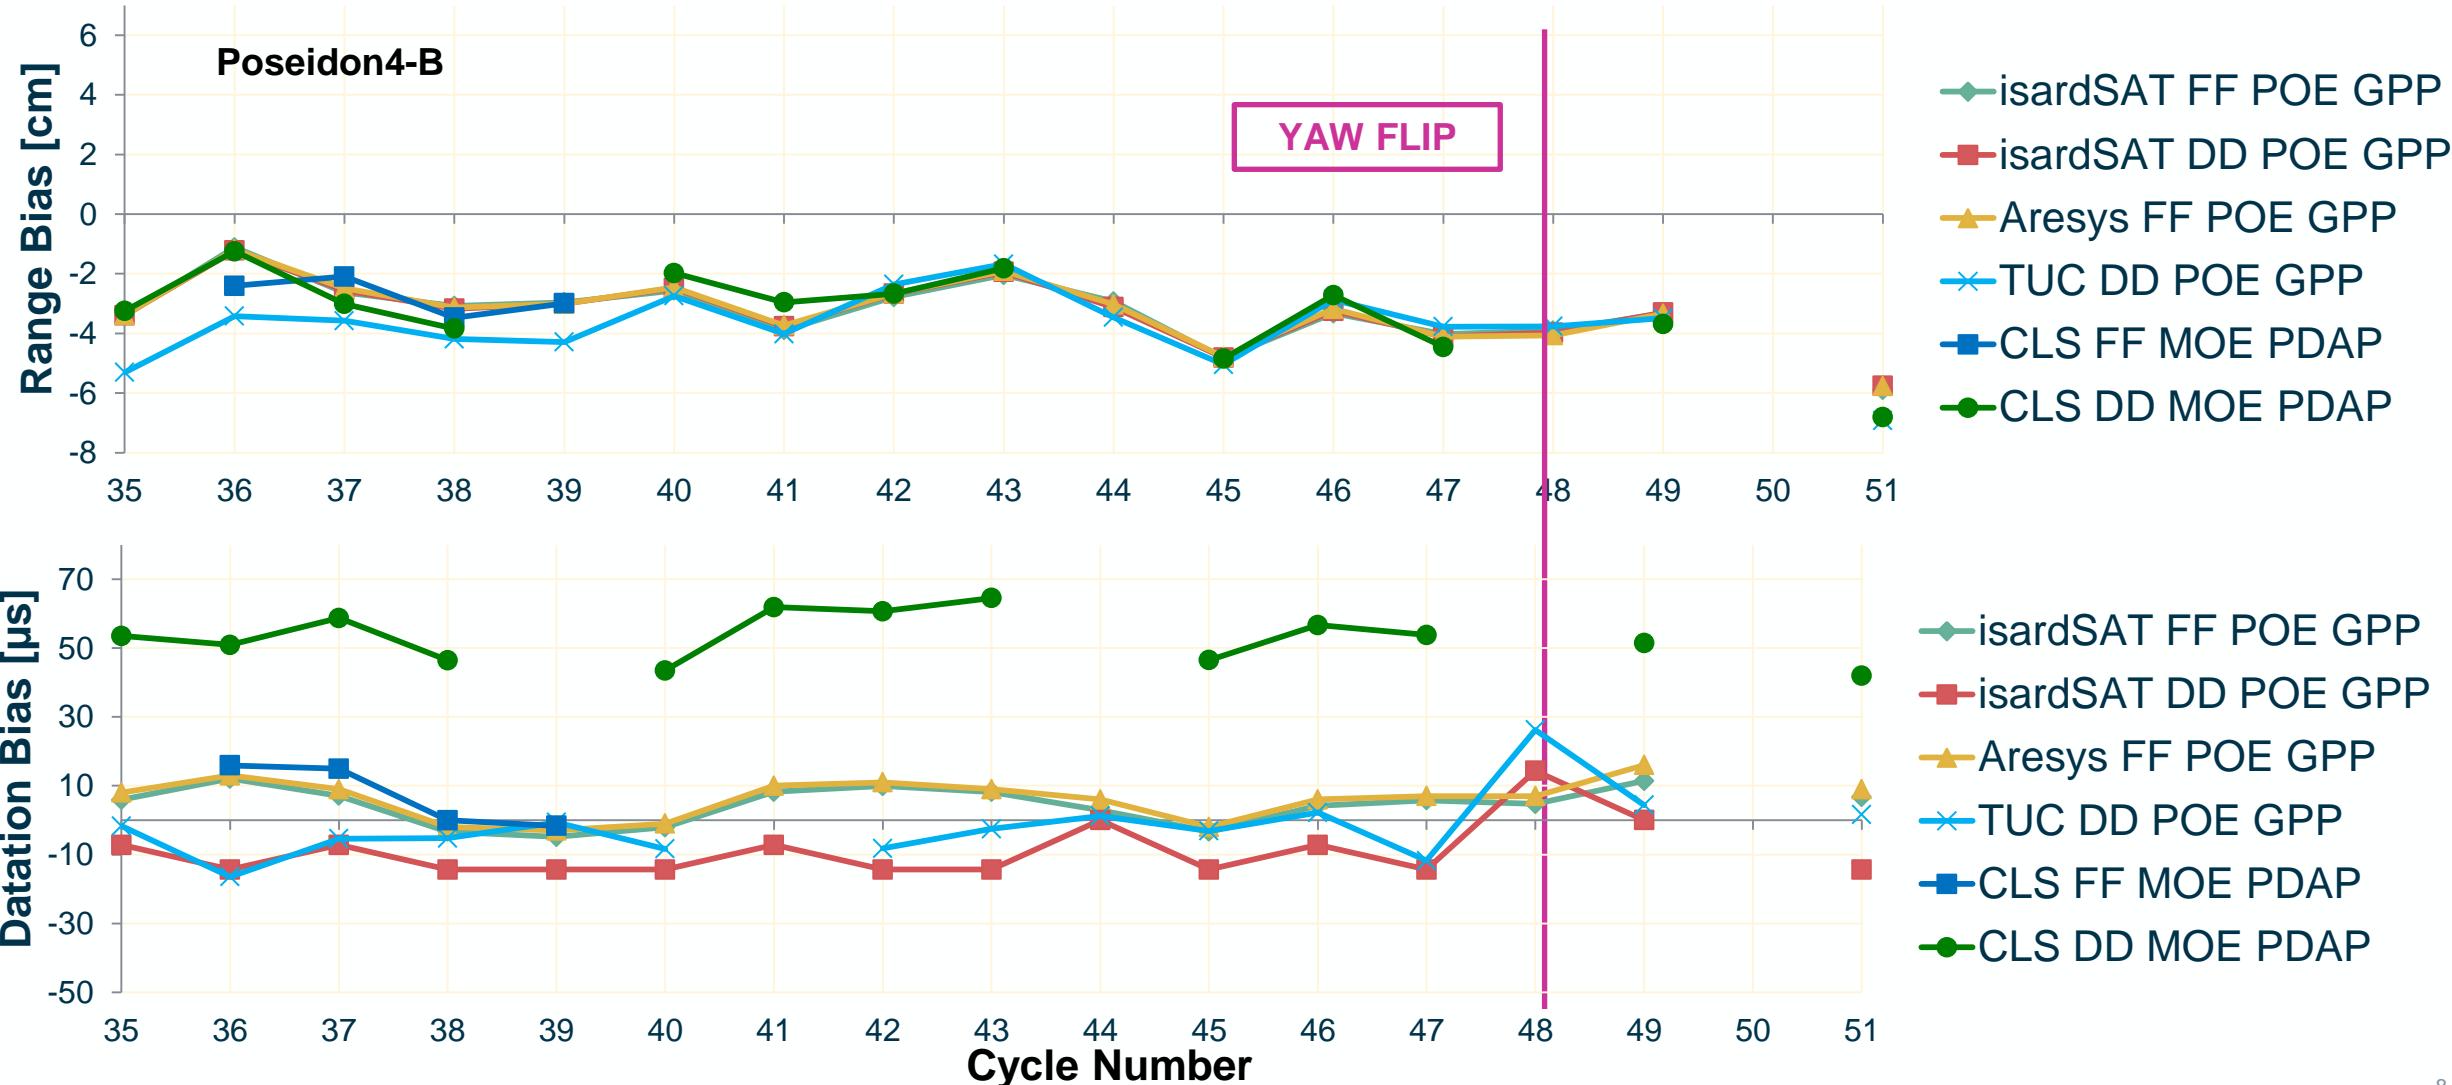

CDN1 - Descending Passes No.18

GVD1 - Descending Passes No.18

GVD1 - Ascending Passes No.109

Range Bias Anomaly

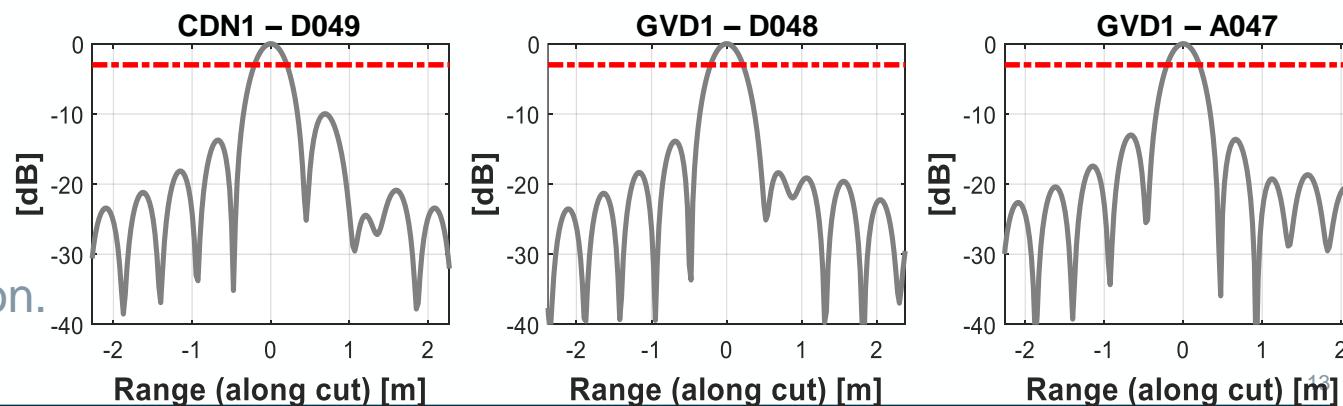

- Range bias anomaly recently observed in GVD1 asc. passes w.r.t. GVD1 and CDN1 desc. Passes,
- Collaborative investigation, dedicated meetings, analysis on several fronts,
- Not a rigid shift while IRF distortion,
- Waiting for effects after transponder signal isolation.

	CDN1-D – GVD1-D	CDN1-D – GVD1-A	GVD1-D – GVD1-A
Side lobe #1	13.8 mm	-7.0 mm	-20.8 mm
Side lobe #2	13.7 mm	-5.1 mm	-18.7 mm
Side lobe #3	12.7 mm	-5.3 mm	-17.9 mm

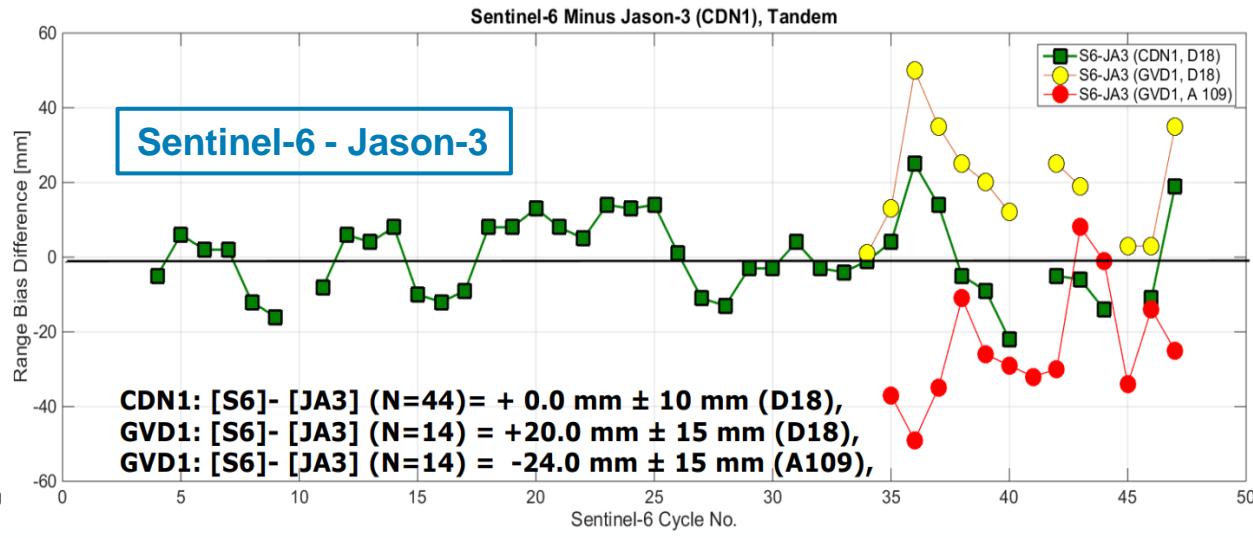

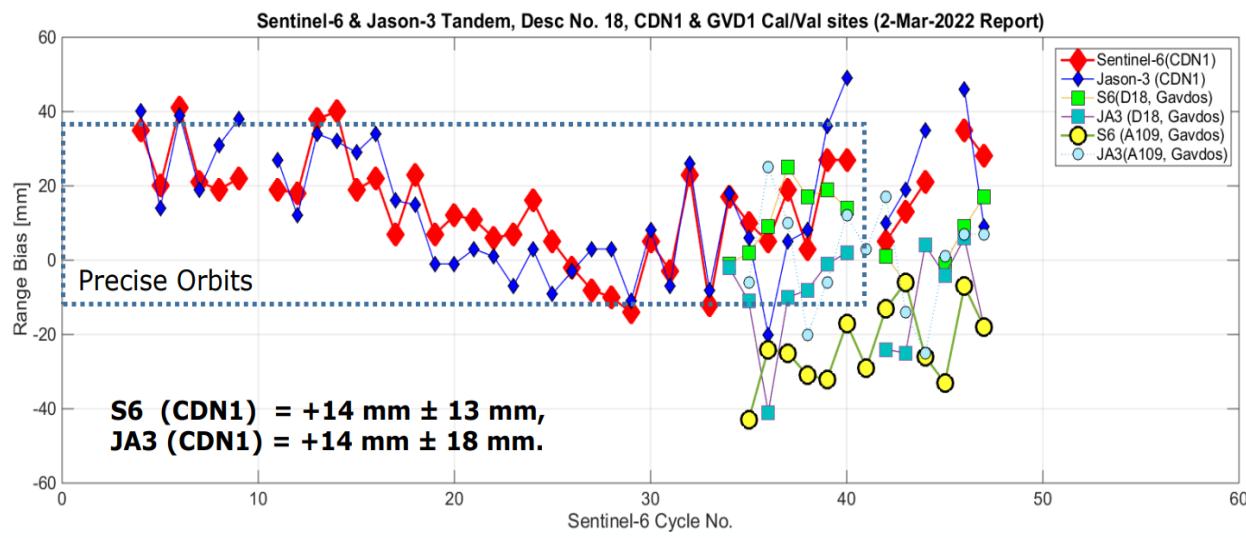

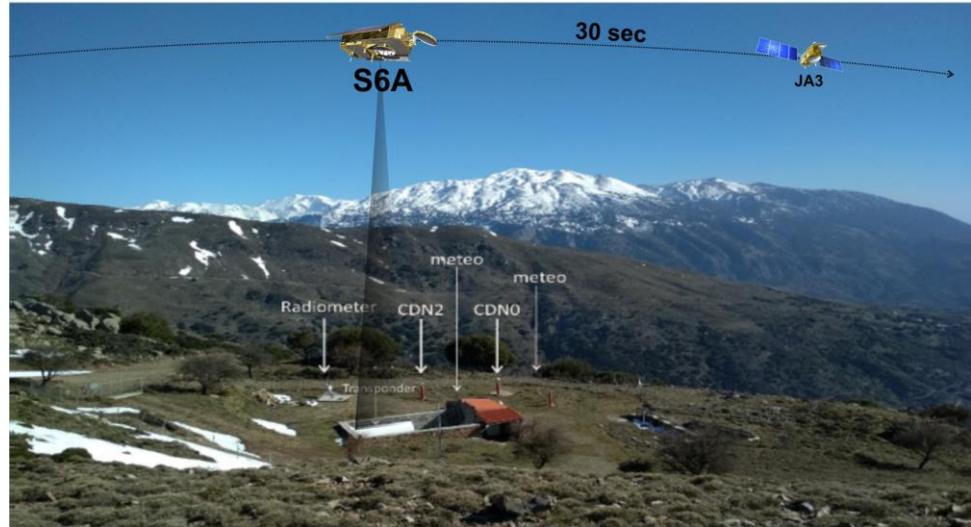

Side lobes peaks position statistics

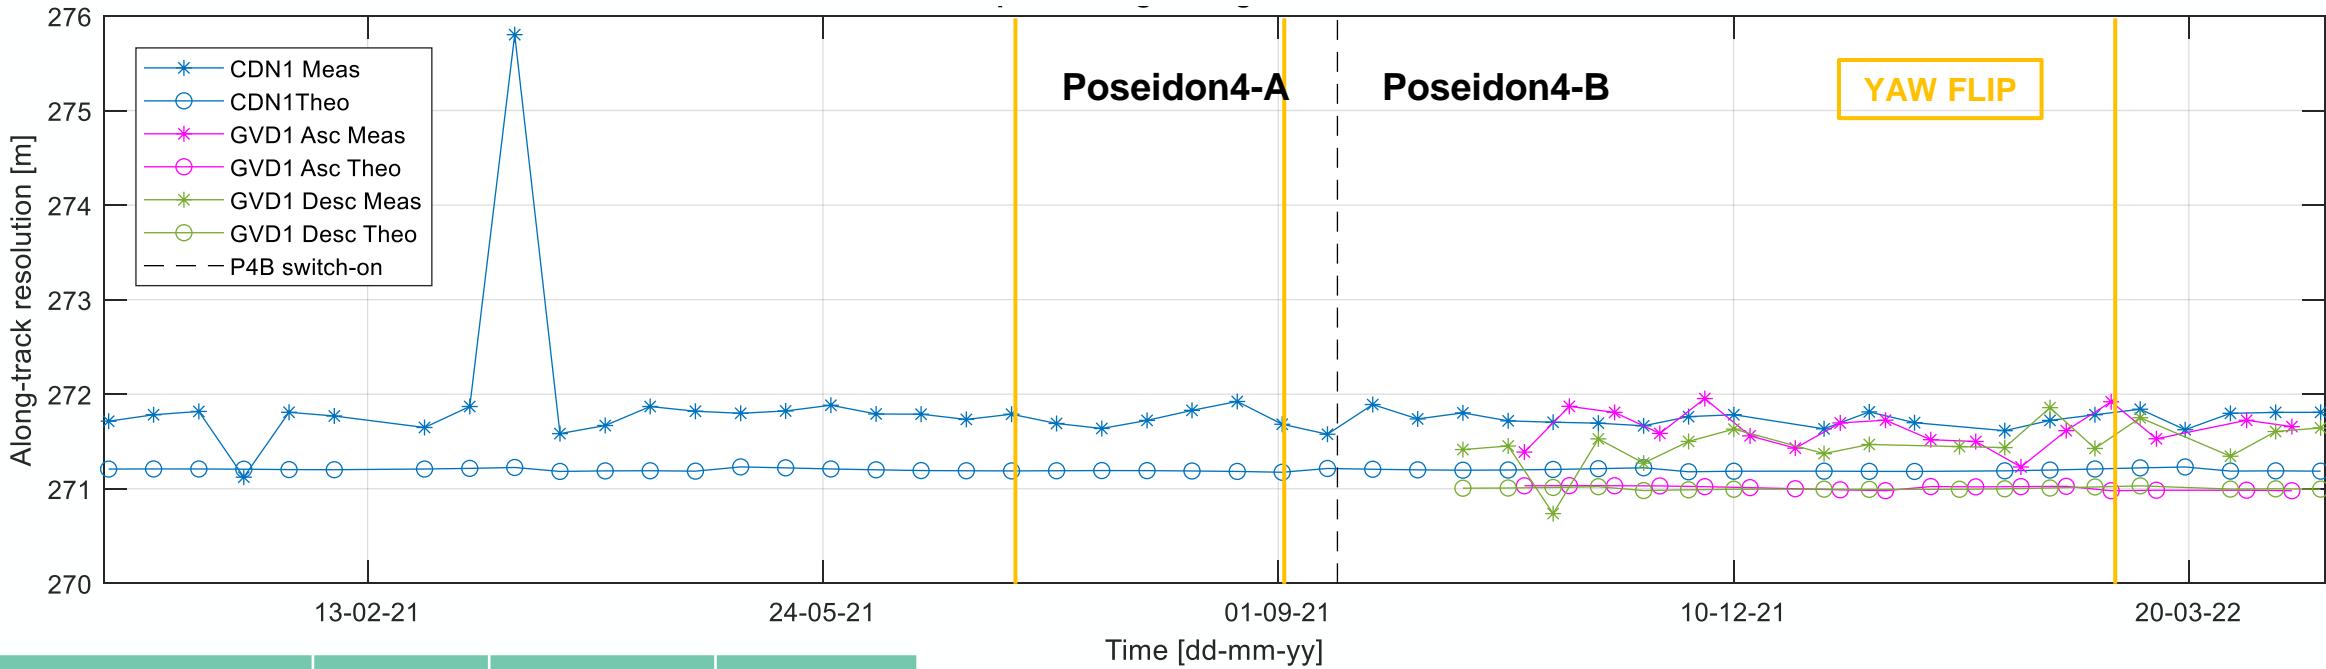

Sentinel-6 – Jason-3 in Tandem over CDN1 & GVD1

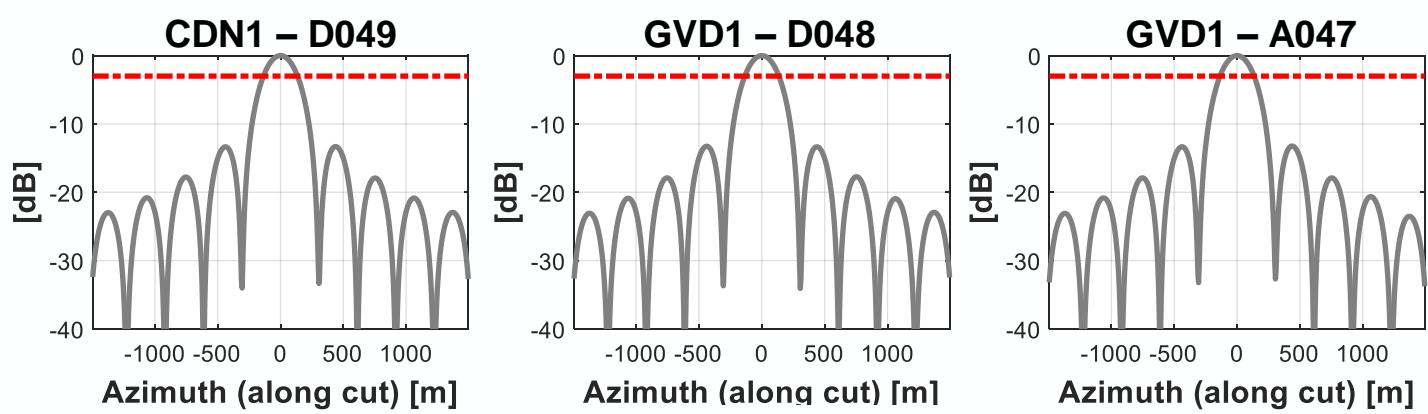

- Jason-3 was the reference mission for ocean altimetry until cycle 51 (April 2022),
- Jason-3 is 30 seconds ahead Sentinel-6,
- Comparison performed by Space Geomatica & Technical University of Crete,
- Delay Doppler (low resolution) processing,
- Fluctuations caused by Jason-3 implementing yaw steering.

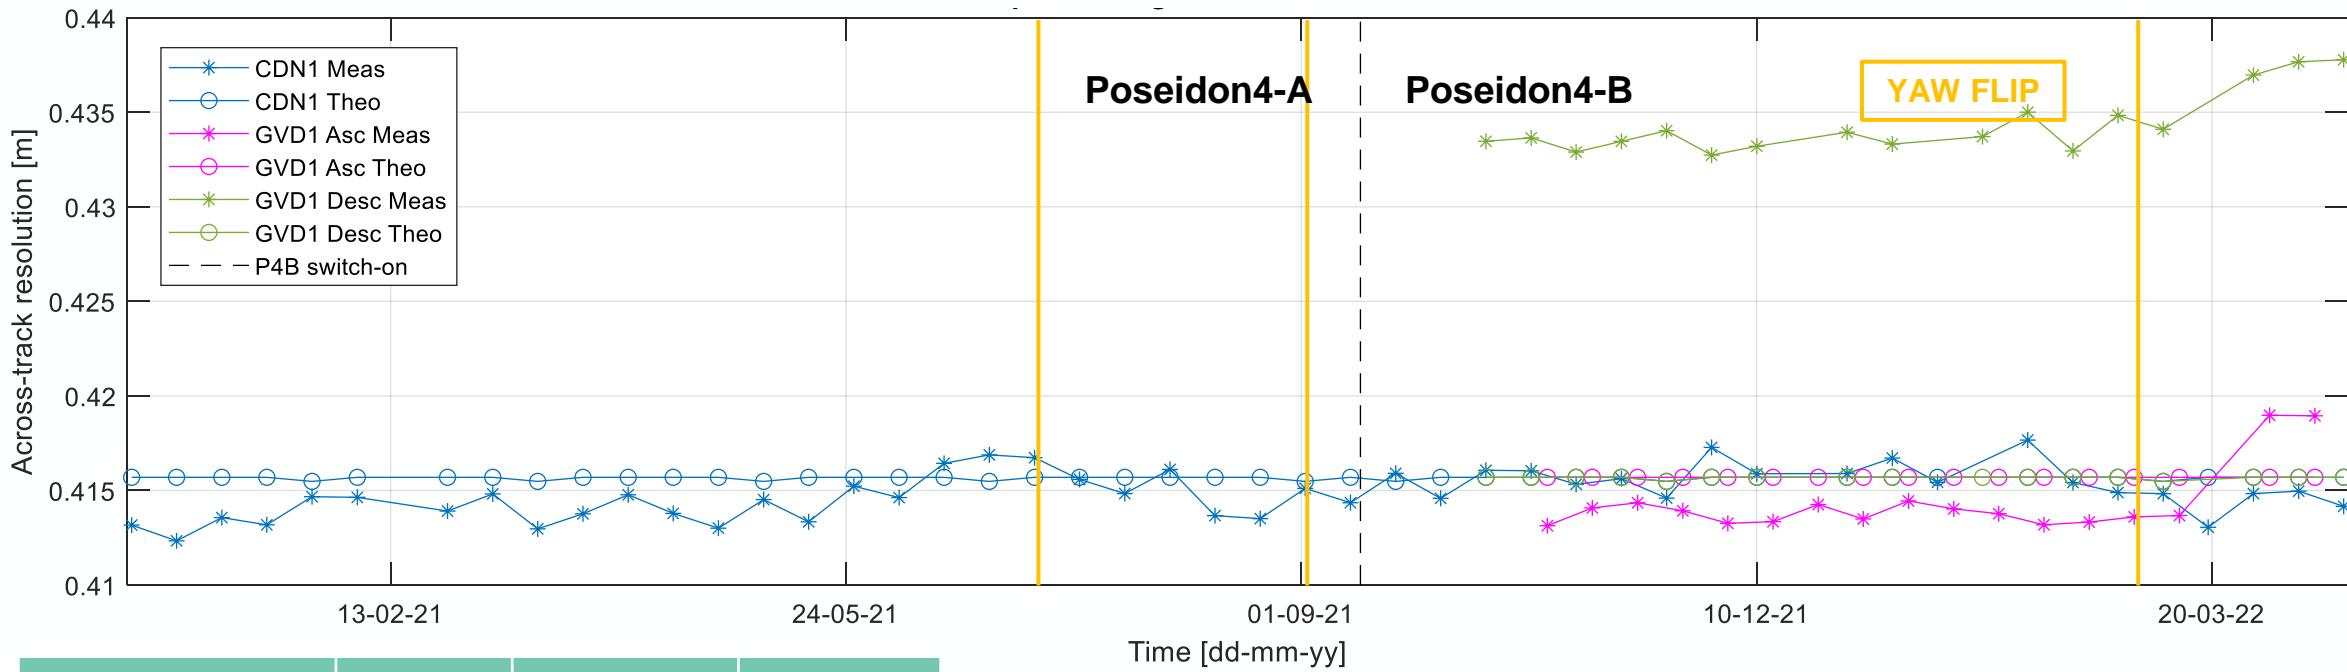

DD PTR – Azimuth Resolution

	CDN1	GVD1 Desc	GVD1 Asc
Average resolution [m]	271.826	271.463	271.630
STD resolution [m]	0.605	0.239	0.195
Average error [m]	0.627	0.461	0.621

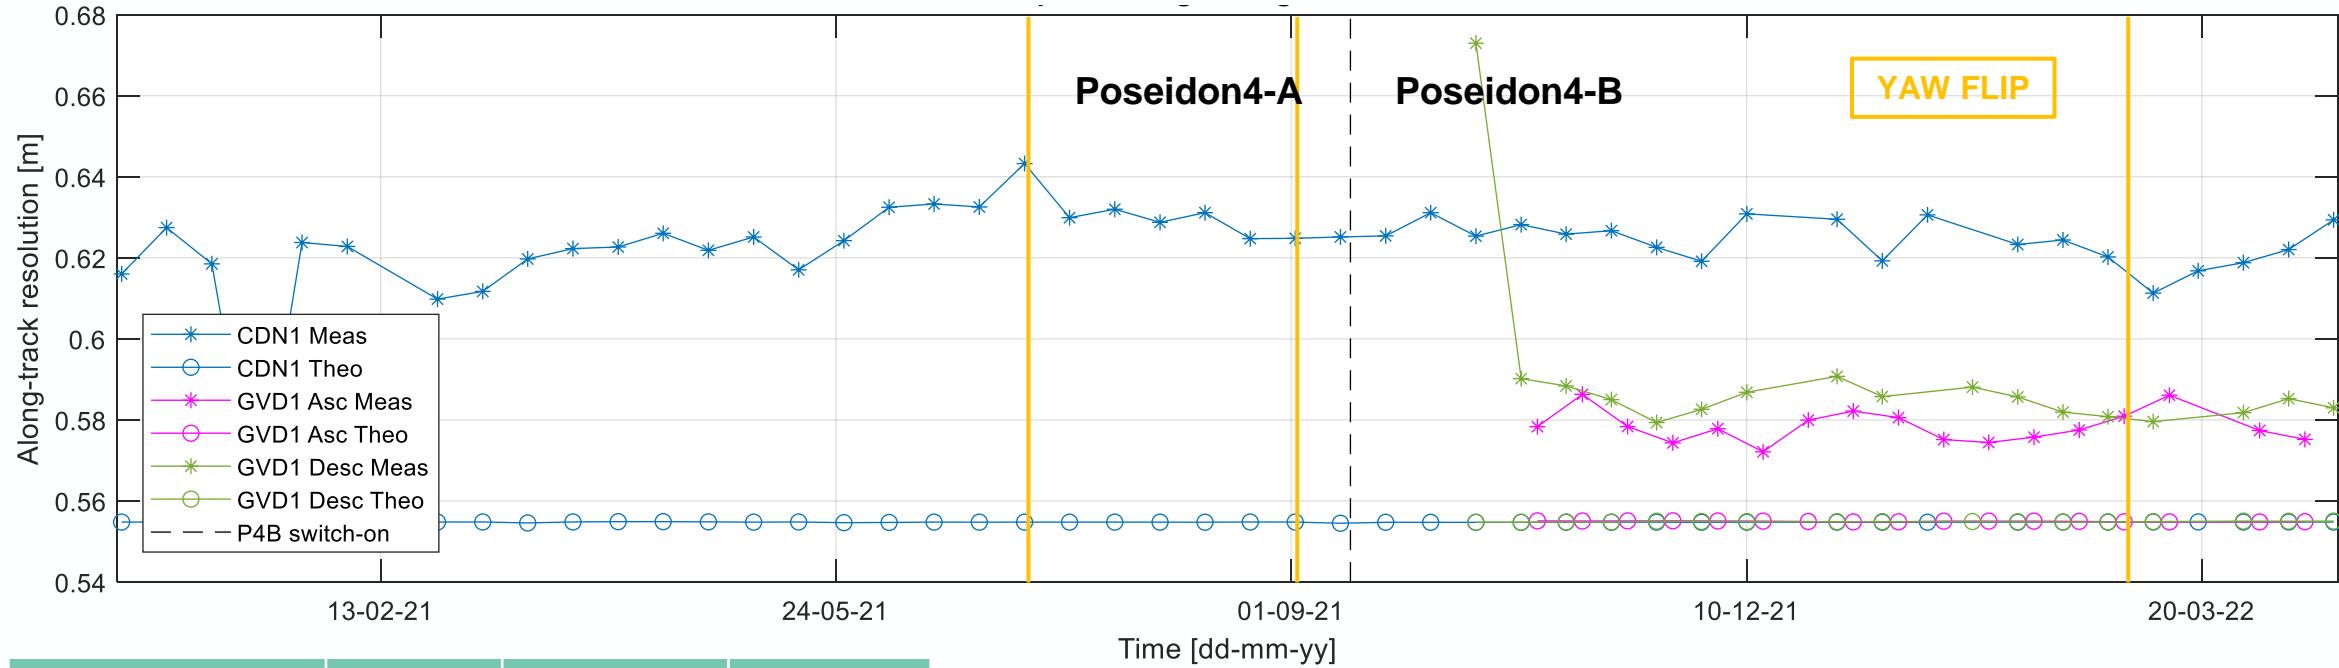

DD PTR – Range Resolution

	CDN1	GVD1 Desc	GVD1 Asc
Average resolution [m]	0.415	0.434	0.414
STD resolution [m]	0.001	0.002	0.002
Average error [m]	-0.001	0.019	-0.001

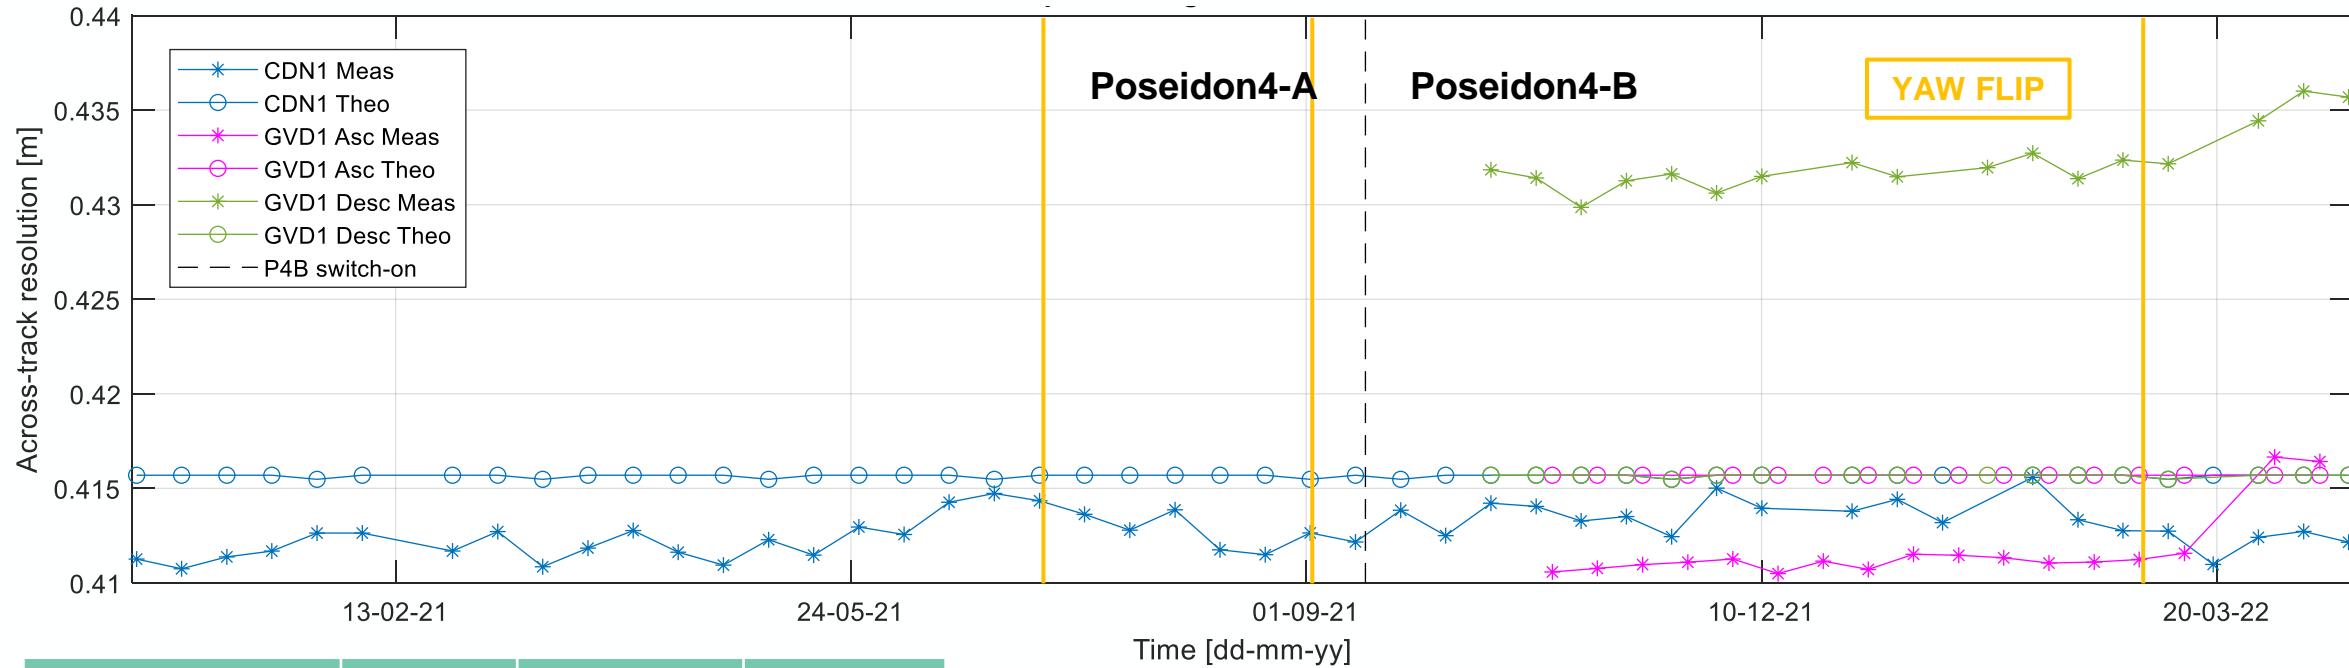

FF PTR – Azimuth Resolution

	CDN1	GVD1 Desc	GVD1 Asc
Average resolution [m]	0.623	0.590	0.578
STD resolution [m]	0.011	0.022	0.004
Average error [m]	0.068	0.035	0.023

FF PTR – Range Resolution

	CDN1	GVD1 Desc	GVD1 Asc
Average resolution [m]	0.413	0.432	0.412
STD resolution [m]	0.001	0.002	0.002
Average error [m]	-0.003	0.017	-0.004

Corner Reflector Results

- Calibration using Point Targets (CaPoTa),
- Analysis performed by isardSAT,
- Comparable results w.r.t. Transponder,
- Long term stability and good performance/cost ratio.
- Poster (Day 2) -> *A Trihedral Corner Reflector to Support Sentinel-6 Radar Altimeter External Calibration Using VHR FFSAR Algorithms*, Adrià Gómez Olivé et al., isardSAT

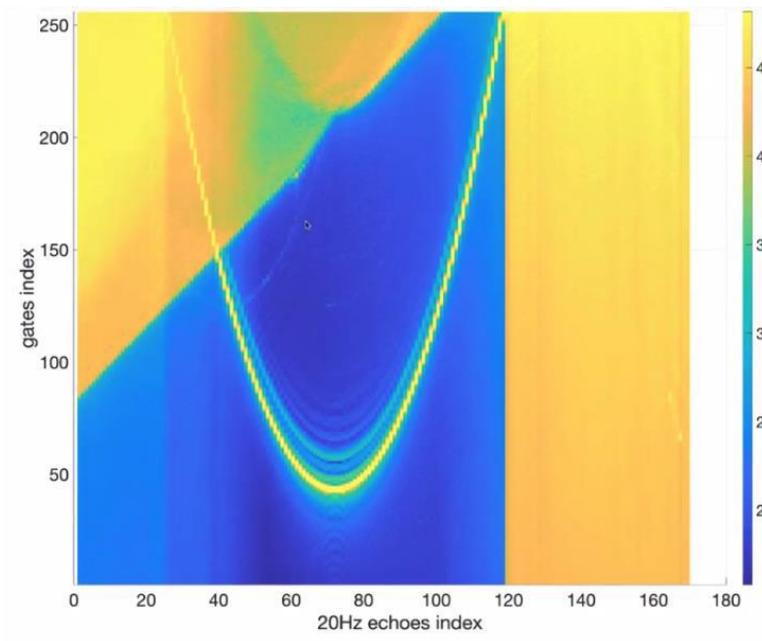

Santa Catalina Results

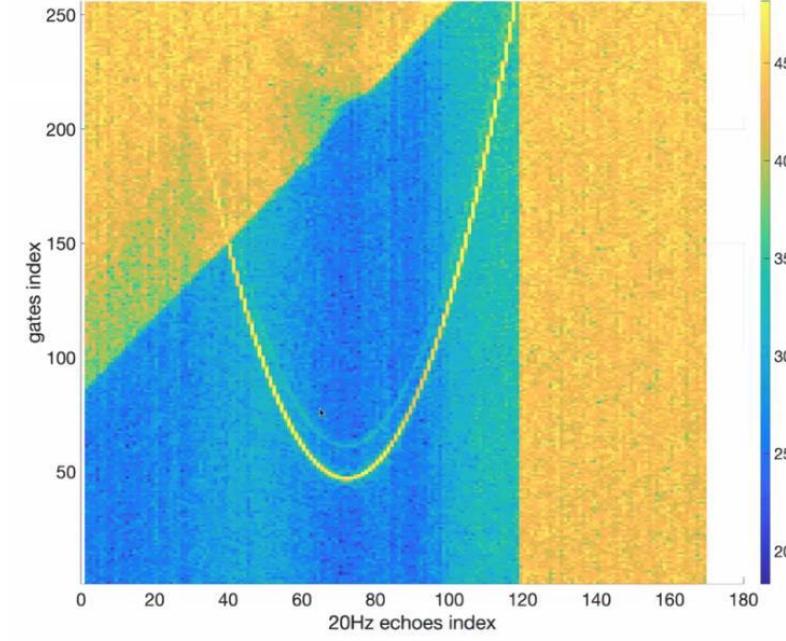

- Passes over JPL Transponder analysed by isardSAT
- First Sentinel-6 pass on the 14 of April 2022,
- Performances are under evaluation,
- Echoes from Ku and C band were properly acquired by Sentinel-6.

Measured waveforms Ku-Band in dB scale

Measured waveforms C-Band in dB scale

- Convened by ESA for its contribution to Sentinel-6 Cal/Val.
- Turned out to be a winning strategy.
- Diverse institutions contribute in different ways to continuous monitoring of Sentinel-6.
- Periodical meetings.
- Results produced independently shared & Compared.
- Unexpected issues quickly identified & discussed.
- The number of infrastructures available provide Reliable & Redundant capabilities.
