

living planet symposium | BONN

23-27 May 2022

TAKING THE PULSE
OF OUR PLANET FROM SPACE

Artificial Intelligence for SAR Quality Control

ICEYE

João G. Vinholi
ML Engineer

ESA UNCLASSIFIED – For ESA Official Use Only

UNMATCHED PERSISTENT MONITORING CAPABILITIES

WITH THE WORLD'S LARGEST SAR CONSTELLATION

2012

ICEYE
LAUNCHED

**HEADQUARTERS IN
FINLAND**

PRESENCE IN:
POLAND, US, SPAIN,
LUXEMBOURG, & UK

3400+

SAR IMAGES
**ANALYSED TO
DATE**

**WORLD LEADER
IN SYNTHETIC APERTURE
RADAR (SAR)
MINIATURIZATION
TECHNOLOGY**

16

SAR
SATELLITES

CUSTOMERS
INCLUDE
**European Space
Agency, European
Maritime Security
Agency**

Image Artifacts

- Speckle
- Ambiguities
- RF Interference
- DFT Side Lobes

+

Geolocation Errors

- Image Defocusing
- Coregistration Problems
- Bad Orthorectification

Image Artifacts

The ambiguities were generated by the secondary lobes of the azimuth antenna pattern

Corrected Image

Range Ambiguities

Left: The image is strongly impaired by range ambiguities, that resemble transparent copies of the upper features.

Right: Corrected image.

Geolocation Errors

Geolocation Errors

Available at: <https://www.iceye.com/lp/example-strip-sar-dataset-acre-brazil>

Image synthesized with correct geolocation info.

Image synthesized with wrong geolocation info.

Geolocation Errors

Stacking of SAR Images Can Be Severely Impaired by Geolocation Errors

Targets in both images are overlapping in the difference image, despite not being in the same spatial location.

Trying to detect the targets in the first image by change detection is impossible, as both images cancel out in this spot.

Coregistration of EO Images with Incorrectly Geolocated Images

Why AI for Coregistration?

- Traditional coregistration algorithms are **often not robust enough** to coregister images from **different data domains**.
 - SAR to SAR from different sensors.
 - SAR to optical data.
 - Optical to LIDAR data.

- Some image pairs present **distortions and shifts** between themselves, caused by multiple possible factors: different projections, bad elevation data for orthorectification, etc. Traditional algorithms **are not robust enough** to this combination.

- Deep learning-based solutions have shown for a decade their capacity of identifying complex patterns in data.

Data Preparation

Image A available at:
<https://www.iceye.com/lp/example-strip-dataset-peru-oil-spill>
