

The SEN12MS-CR-TS Dataset for Multi-Sensor Cloud Removal in Satellite Image Time Series [1]

Patrick Ebel | TUM Technical University of Munich | Germany

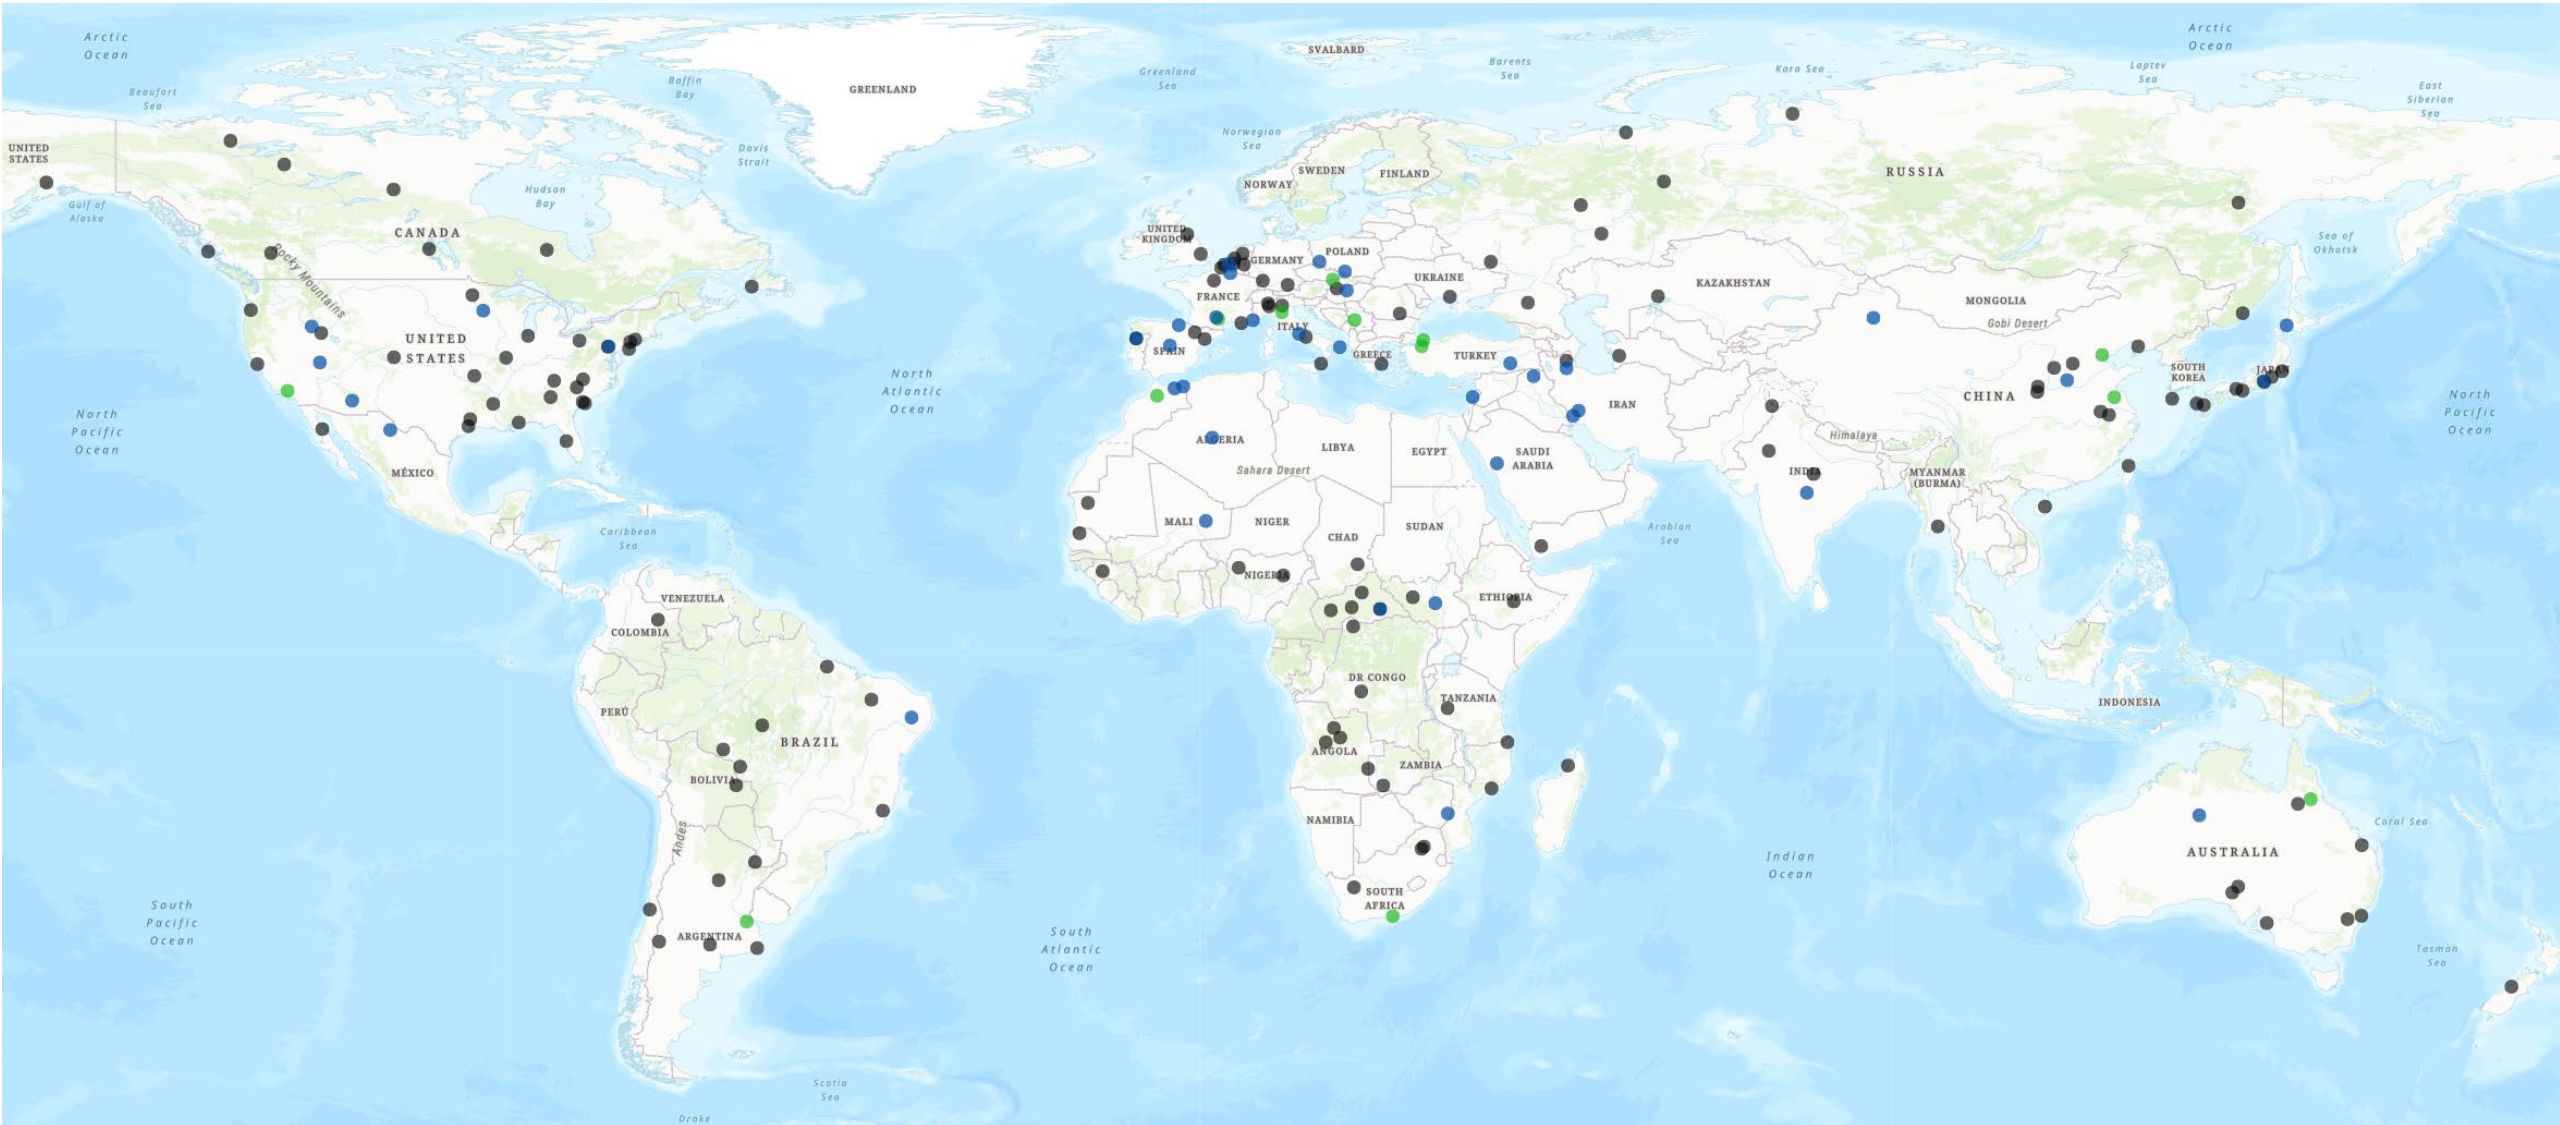

Wissen für Morgen

Publication: SEN12MS-CR-TS - A Remote Sensing Data Set for Multi-modal Multi-temporal Cloud Removal

- what: a data set for cloud removal in optical satellite images
 - why: about 60 % of Earth observations are affected by clouds [2]
 - how: provide training & testing data with
 - Sentinel-1 & (cloudy / cloud-free) Sentinel-2 time series
 - for 53 globally distributed ROI
 - 30 observations acquired throughout 2019
- aim: provide benchmark for cloud removal in Sentinel-2 data
- purpose: facilitate image processing, network pre-training etc
- ~ backward-compatible to prior data sets [3, 4]

exemplary data: paired Sentinel-1, Sentinel-2 and cloud masks

scenario: seq2point cloud removal --- given t cloudy input time points, predict 1 cloud-free output

seq2point cloud removal

- integrates information across time and modalities

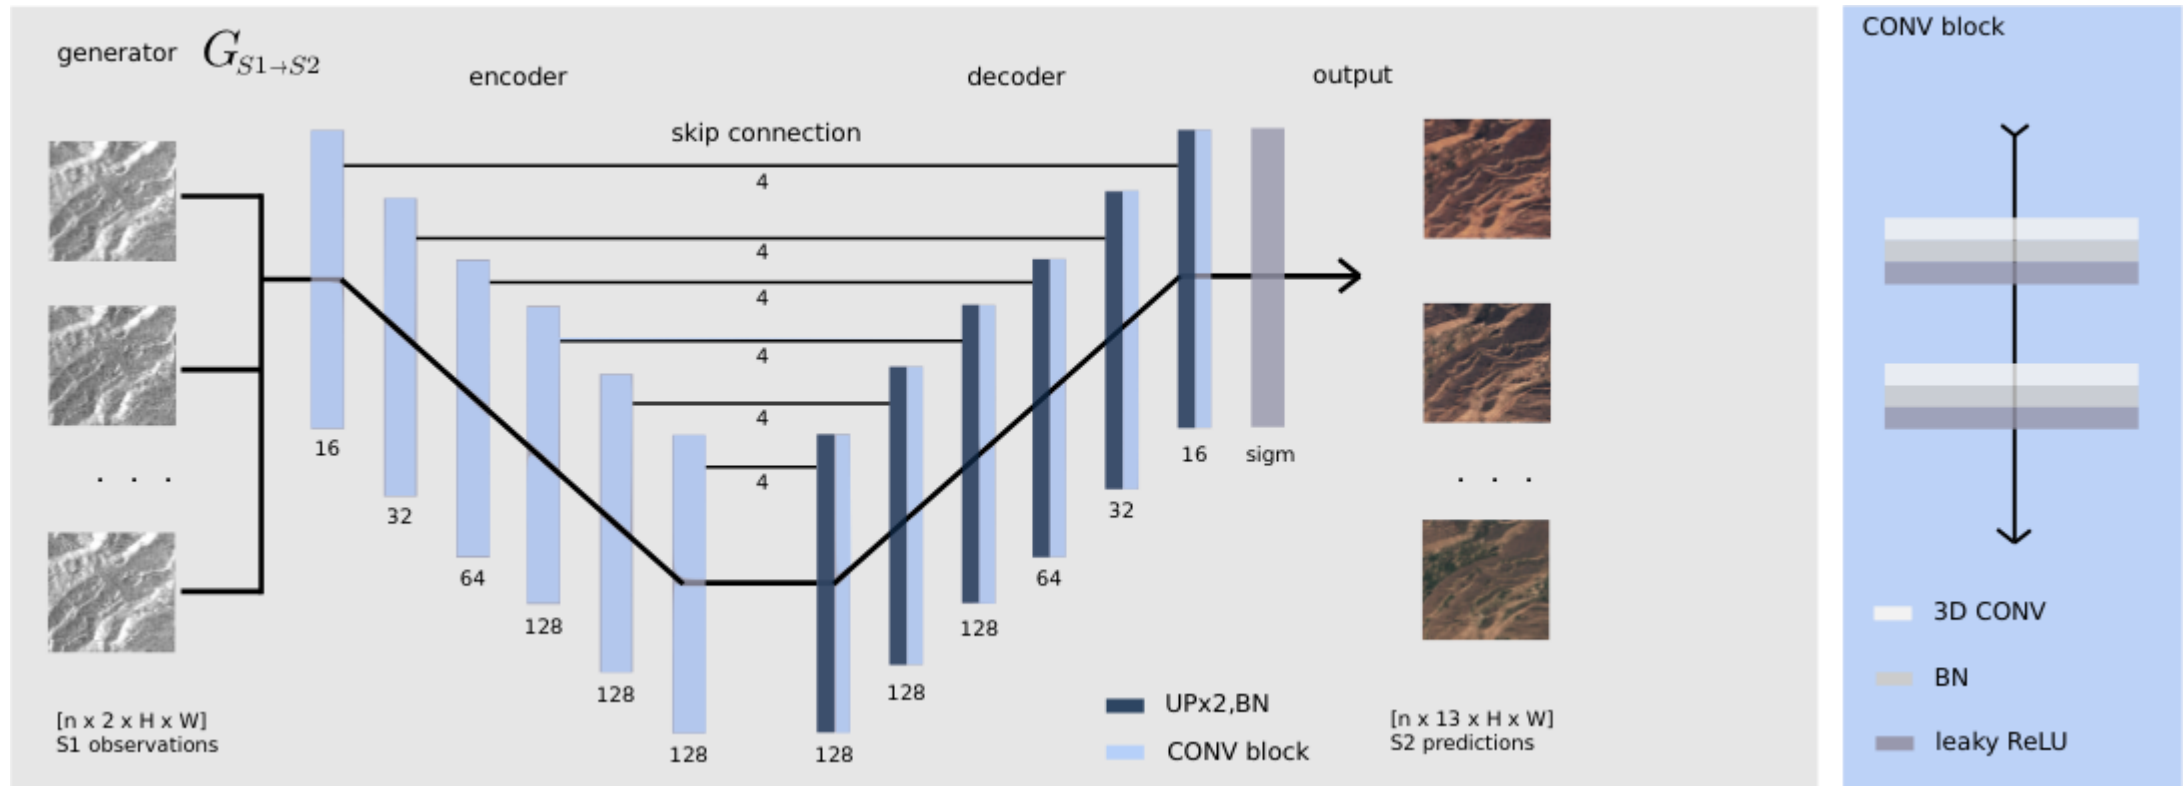

seq2point cloud removal

seq2seq cloud removal

- follows an intrinsic learning approach, trained on the sequence of interest [5, 6]

seq2seq cloud removal

- follows an intrinsic learning approach, trained on the sequence of interest [5, 6]

Summary: SEN12MS-CR-TS - A Remote Sensing Data Set for Multi-modal Multi-temporal Cloud Removal

- contains: - Sentinel-1 & (cloudy / cloud-free) Sentinel-2 time series
 - for 53 globally distributed ROI
 - 30 observations acquired throughout 2019

→ aim: provide benchmark for cloud removal in Sentinel-2 data
→ purpose: facilitate image processing, network pre-training etc.
